Gastrointestinal Physiology

This book offers one of the most comprehensive reviews in the field of gastrointestinal (GI) physiology, guiding readers on a journey through the complete digestive tract, while also highlighting related organs and glandular systems. It is not solely limited to organ system physiology, and related disciplines like anatomy and histology, but also examines the molecular and cellular processes that keep the digestive system running. As such, the book provides extensive information on the molecular, cellular, tissue, organ, and system levels of functions in the GI system. Chapters on the roles of the gut as an endocrine, exocrine and neural organ, as well as its microbiome functions, broaden readers' understanding of the multi-organ networks in the human body. To help illustrate the interconnections between the physiological concepts, principles and clinical presentations, it outlines clinical examples such as pathologies that link basic science with clinical practice in special "clinical correlates" sections. Covering both traditional and contemporary topics, it is a valuable resource for biomedical students, as well as healthcare and scientific professionals.

Physiology Question-Based Learning

This book provides the reader with a range of questions and explanations related to essential aspects of the neural, hormonal and gastrointestinal physiology. The focus of the book is on understanding the homeostatic control in each system by using questions to challenge the reader to think through physiology. In addition, functional integration of the different organ systems is highlighted in an area such as neuroendocrinology and in the study of the neural mechanisms in the gastrointestinal tract. This is the second Physiology Question-Based Learning book, written by Prof. Dr. Cheng. He has taught physiology for thirty years. He has pioneered the international physiology quiz, which is now an annual event at the University of Malaya in Kuala Lumpur, Malaysia and at universities around the world. As quiz master, he has designed challenging questions to test concepts and understanding in physiology. This book reflects the style of questions asked during the physiology quiz. The questions are designed to

stimulate integrative and homeostatic thinking in physiology. The Physiology Question-Based Learning books will be helpful to all students of Physiology in medicine, dentistry, pharmacy and allied health sciences. This work is written to make physiology learning engaging and enjoyable and to encourage effective teaching in physiology.

Endocrine System and Digestive System

The discovery that the same or similar peptides are present in endocrine cells and in neurons is one of the most exciting and provocative recent developments in biology. Suddenly neurophysiologists and endocrinologists have found that they have a great deal to discuss with each other. Substances originally isolated as hypothalamic hormones turn out to be abundantly present in neurons of other parts of the brain and in endocrine cells and neurons of the gut and pancreas. Similarly, substances originally isolated as gut hormones are found not only in gut endocrine cells but also in gut neurons and in brain neurons. It turns out that the group of peptides that we are accustomed to call gastrointestinal hormones are not all confined to the gastrointestinal tract and are not all solely hormones. We are learning that the chemical transmitters of the neurocrine, endocrine, and paracrine systems form a single group of related substances. This volume contains the latest installments in this fascinating story. It tells how these peptides were isolated and their amino acid sequences determined, how the heterogeneity of most, perhaps all, of these peptides is being revealed as variant forms of them are discovered, how antibodies to these peptides are used as powerful tools to measure their concentrations in body fluids and to localize the cells in which they are synthesized and stored, and, finally, how the role of these substances in normal physiology and in pathological states is being unraveled.

Gastrointestinal Hormones and Pathology of the Digestive System

Discusses the major systems of the body in a question and answer format.
