Objectives: Paradigm Shifts to Consider for Perioperative Anticoagulant Management

Paradigm Shift No. 1

Illustrative Case • 75-kg old female with AF on warfarin, TTR 75% - hypertension, diabetes, TIA 2 yrs

ago (CHADS, = 5)

What causes perioperative stroke in anticoagulate patients and how can we prevent it?

BRIDGE: Trial Design

BRIDGE Trial: Primary Study Outcomes No Bridging

PERIOP-2: Results

Paradigm Shift No. 2

Illustrative Case • 75-yr old female with AF on apixaban, 5 mg BID - hypertension, diabetes, TIA 2 yrs ago (CHADS,-5)

Pharmacokinetic-based Perioperative DOAC Management

Reason 1: there is no established 'safe for surgery' DOAC level

Situations where "abnormal" results are allowed for safe surgery

PK-based Interruption of Anticoagulantes (no need for blood tests) • Unfractionated heparin

Perioperative DOAC Management Protocol

Key Pharmacokinetic Properties of Anticoagulant

Results: Primary Outcomes (ITT Analysis)

Are "increased DOAC levels" associated with increased perioperative/surgical bleeding? (univariate analysis)

What are predictors of periop bleeding? (major or clinically-relevant non-major)

Routine Coagulation Tests and DOAC Levels

PT to measure Rivaroxaban and Apixaban

aPTT and TT to measure Dabigatran

Paradigm Shift No. 3

BRUISECONTROL-1 Trial

Perioperative Hemostasis: continue OAC vs. interrupt + bridge

Multiple Redundant, Clotting Pathways

Do mild coag test abnormalities 1 periop bleeding? When are you "good to go"?

back to the Presentation Objectives

#1. Virtual perioperative management: is it safe?

PAUSE-Virtual Study

PAUSE vs. ASRA Management

What do docs prefer? Physician survey: Oct-Dec 2019 Preferred clinical scenarios: surgery with neuraxial anesthesia in

PAUSE-2: Study Design

Bentracimab • Phase II study in healthy volunteers of neutralizing IV monoclonal antibody fragment that binds ticagrelor (reversible agent) and its metabolites

Traumatic Brain Injury in Children and Adolescents

The return to school following traumatic brain injury (TBI) is fraught with challenges for children and adolescents, their families, and school professionals. This volume provides the practical knowledge needed to understand the neuropsychological problems associated with TBI and facilitate students' reintegration into the regular or special education classroom. Research-based strategies are presented for assessing and accommodating each student's needs, with suggestions for testing that can be completed by practitioners without extensive neuropsychological training. Featuring numerous illustrative clinical examples, the book also includes an extended case history that brings to life the entire process of recovery from TBI. Reviewing basic neuroanatomy, the book first discusses the functional problems and areas of learning difficulty that typically arise from different types of injury. It explores the associated

emotional challenges and issues facing families, emphasizing the importance of working closely with parents and building effective home-school partnerships. Identified and briefly described are over 30 psychological measures that can be used to evaluate cognitive and academic skills; memory and learning; attention; executive and reasoning skills; visual-motor and perceptual skills; and psychosocial, emotional, and behavioral functioning. Detailed sample assessments are provided for two students with injuries of varying severity, showing how test results and other information can be integrated into a useful comprehensive report. Guidelines are then presented for managing school reentry and conducting team-based planning and decision making. General programming considerations are discussed, as are specific interventions that incorporate knowledge from the fields of ADHD, learning disabilities, and adult rehabilitation. Written in a clear, non-technical style, this book is an essential resource for school psychologists, counselors, and social workers; special education professionals; and other clinicians working with young people. It will also serve as a text in graduate-level neuropsychological assessment courses.

Pediatric Traumatic Brain Injury

Pediatric Traumatic Brain Injury: Proactive Intervention, Third Edition presents a unique philosophy for assessing and treating children and adolescents with traumatic brain injury. The text is written for the many service providers and families who support children or adolescents with TBI. The road to recovery after an injury or illness can be challenging and complicated. The authors' proactive approach encourages strong collaborative partnerships that encourage family, healthcare, and education providers to join forces in order to acquire the insights, knowledge, and tools needed to identify problems and implement personalized solutions. Readers will gain valuable resources and information about extending services beyond the walls of hospital and school settings. The authors stress the importance of focusing on cognitive-communication skills and supporting reintegration and functional success in home, school, community and work situations. The authors build readers' understanding of the causes, characteristics, and impact of pediatric TBI. Functional assessment and treatment approaches are recommended to facilitate positive reintegration experiences. The text illustrates the challenges students face when confronted with demands and expectations in social and academic situations. Educators and healthcare providers will recognize the value of interprofessional collaboration and be motivated to employ problem solving approaches. Key Features Provides practical resources, forms, and handouts that can be personalized and shared with families and colleagues Presents a framework for developing Individualized Transition and Individual Family Service Plans Recommends topics for professional development Includes information on returning to learning following concussion

Traumatic Brain Injury Rehabilitation

Traumatic Brain Injury Rehabilitation: Children and Adolescents provides rehabilitation professionals in all areas of rehabilitation with a comprehensive, interdisciplinary framework for treatment of brain-injured children and adolescents. The book begins with an explanation of the pathophysiology of closed head injury and its typical consequences, leads the reader through various clinical intervention and therapeutic techniques, and concludes with guidelines for re-integrating the child into school, family, and work communities. Drawing upon the authors' backgrounds in speech-language therapy, occupational therapy, physical therapy, physical medicine and rehabilitation, and neurology, the book presents a thorough discussion of all areas of head injury rehabilitation.

Childhood Traumatic Brain Injury

"This is a small, rapidly digested monograph reviewing the psychological consequences, assessment and therapy of children following traumatic brain injury. This book will serve as a useful introduction to the topic for neuropsychologists, as well as teachers, occupational therapists and speech therapists. Conversely, generalist clinicians may find useful insights into the psychologist's approach to children suffering head injury, that may suggest intervention strategies for less severely affected children for whom specialist help is not available." --R. Forsyth in *Paediatric and Perinatal Epidemiology* Traumatic brain injury in children and adolescents represents a set of dysfunctions that broadly impact the individual, family, and society in general. In this brief yet comprehensive volume, the authors address the key issues and procedures pertaining to the assessment and treatment of children and adolescents who have sustained such injuries. They explore different types of brain injuries, including related neuropathological mechanisms, and review case study material on outcomes across a variety of developmental parameters.

Pediatric Traumatic Brain Injury

Every day, children and adolescents worldwide return to the educational setting having sustained a traumatic brain injury (TBI). The possible negative consequences of TBI range from mild to severe and include neurological, cognitive, emotional, social, and behavioral difficulties. Within the school setting, the negative effects of TBI tend to persist or worsen over time, often resulting in academic and social difficulties that require formal and informal educational assistance and support. School psychologists and other educational professionals are well-positioned to help ensure students with TBI receive this assistance and support. *Working with Traumatic Brain Injury in Schools* is a comprehensive practitioner-oriented guide to effective school-based services for students who have experienced a TBI. It is primarily written for school-based professionals who have limited or no neurological or neuropsychological training; however, it contains educational information that is useful to professionals with extensive knowledge in neurology and/or neuropsychology. This book is also written for parents and guardians of students with TBI because of their integral role in the transition, school-based assessment, and school-based intervention processes. Chapter topics include: basic brain anatomy and physiology; head injury and severity level classifications; biomechanics of injury; injury recovery and rehabilitation; neurological, cognitive, emotional, behavioral, social, and academic consequences; understanding community-based assessment findings; a framework for school-based assessment (TBI-SNNAP); school-based psychoeducational report writing, and school-based interventions; monitoring pharmacological interventions; and prevention. An accompanying website includes handouts, sample reports, and training templates to assist professionals in recognizing and responding to students with TBI.

Working with Traumatic Brain Injury in Schools

A compelling and compassionate case study approach to a broad range of neuropsychological disorders *Neuropsychological Assessment and Intervention for Childhood and Adolescent Disorders* focuses on the neuropsychological assessment and evidence-based practices available for assessing and treating children living with the etiological and neurological components of various disorders. Each chapter provides one or more case studies along with helpful background information, assessment results, and recommendations based on assessment data. Bridging science and practice, the book reviews the scientific literature, research on clinical implications, and evidence-based treatment of such disorders as: Dyslexia and Dyscalculia Specific Language Impairment/Dysphasia Autism Spectrum Disorders Attention-Deficit/Hyperactivity Disorder Tourette Syndrome Traumatic Brain Injury Childhood Cancer Epilepsy Cerebrovascular Disease Low Birth Weight Environmental Toxin Exposure Neurotoxins, Pregnancy, and Subsequent Disorders Chromosomal Anomalies Neurocutaneous Disorders Metabolic Disorders Each case study complements the content of each chapter by illustrating how the assessment process can inform intervention efforts for children. In addition, the cases humanize the effects of various disorders and demonstrate the usefulness of neuropsychological information in treatment and intervention planning, especially within children's educational and social contexts.

Neuropsychological Assessment and Intervention for Childhood and Adolescent Disorders

A cutting-edge synthesis of science and practice, this book covers everything from sports-related concussions to less common types of mild traumatic brain injury (mTBI) and related complications. Preeminent authorities review what is known about mTBI in childhood and adolescence—including its biomechanics, pathophysiology, and neurological and neurobehavioral outcomes—and showcase evidence-based clinical evaluation tools and management strategies. Challenging areas such as evaluating complicated mTBI and treating persistent problems after injury are discussed in detail. Also addressed are forensic issues, injury in very early childhood, and other special-interest topics.

Mild Traumatic Brain Injury in Children and Adolescents

Blosser (education, Villa Julie College) and DePompei (speech-language pathology and audiology, U. of Akron) present a textbook on the treatment of traumatic brain injury (TBI) in children that emphasizes the use of intervention teams combining medical personnel, educators, and families. After an outline of their philosophical orientation and an overview of TBI, separate sections are devoted to assessment, functional treatment approaches, and constructing integrated treatment plans. Annotation copyrighted by Book News, Inc., Portland, OR.

Pediatric Traumatic Brain Injury

This in-depth examination and discussion of how to assess the impact of traumatic brain injury on children and adolescents has a special focus on reintegrating students to school and the community.

It is a much needed and valuable resource for rehabilitation clinicians, educators, psychologists, neuropsychologists and counselors in hospitals, schools, and private practice. Pediatric neuropsychologist Dr. Stephen Hooper addresses the limitations of many current assessment methods with particular attention to the developmental impact of childhood trauma on cognition. He then provides a detailed framework by examining specific assessment constructs and procedures for motor functions, sensory functions, attention, language, visual processing, memory and learning, executive functions, and social and behavior functions. Each chapter has a special section on research findings and clinical practices for children and adolescents with traumatic brain injury (TBI) with recommendations for assessment procedures and measures with detailed tables for reference. This book is essential for all clinicians working with school age children.

Assessment Practices and Procedures in Children and Adolescents with Traumatic Brain Injury

This book addresses the holistic needs of children and adolescents with brain injuries and discusses psychosocial concerns, school and home management issues, and future directions. It integrates existing research findings with extensive clinical experience, providing insight as well as information to guide rehabilitation, and it emphasizes intervention for both TBI and minor head injury.

Psychological Management of Traumatic Brain Injuries in Children and Adolescents

Families are profoundly affected by a child's brain injury, and their participation and support play a critical role in the child's adjustment and ongoing development. As such, today's literature contains a growing number of studies that document the importance of the family's role in the child's recovery. Edited by two experts from the cerebral palsy unit at the distinguished SARAH Network of Hospitals in Brasilia, Brazil, this book is designed for rehabilitation professionals and provides important guidelines for training parents and involving the family in the rehabilitation process. Including 200 line figures representing SARAH's novel neurodevelopmental exercises, as well as a CD-ROM with printable versions of all neurodevelopmental exercises included in the book, as well as some additional ones, *The Child with Traumatic Brain Injury or Cerebral Palsy* prepares rehabilitation professionals for training the family to perform, at home, a rehabilitation program developed by an interdisciplinary team. Clearly presented and easy to follow, this important work will appeal to physicians, physical therapists, occupational therapists, psychologists, neuropsychologists, speech therapists/teachers and all professionals who care for children with cerebral palsy, traumatic brain injury, and developmental delay.

The Child with Traumatic Brain Injury or Cerebral Palsy

During the past decade, significant advances have been made in the field of neurodevelopmental disorders, resulting in a considerable impact on conceptualization, diagnostics, and practice. The second edition of *Child Neuropsychology: Assessment and Interventions for Neurodevelopmental Disorders* brings readers up to speed clearly and authoritatively, offering the latest information on neuroimaging technologies, individual disorders, and effective treatment of children and adolescents. Starting with the basics of clinical child neuropsychology and functional anatomy, the authors present a transactional framework for assessment, diagnosis, and intervention. The book carefully links structure and function—and behavioral and biological science—for a more nuanced understanding of brain development and of pathologies as varied as pervasive developmental disorders, learning disabilities, neuromotor dysfunction, seizure disorders, and childhood cancers. This volume features a range of salient features valuable to students as well as novice and seasoned practitioners alike, including: Overview chapters that discuss the effects of biogenic and environmental factors on neurological functioning. New emphasis on multicultural/cross-cultural aspects of neuropsychology and assessment. Brand new chapters on interpretation, neuropsychological assessment process, and report writing. An integrative model of neurological, neuroradiological, and psychological assessment and diagnosis. Balanced coverage of behavioral, pharmacological, and educational approaches to treatment. Case studies illustrating typical and distinctive presentations and successful diagnosis, treatment planning, and intervention. Important practice updates, including the new HIPAA regulations. *Child Neuropsychology, 2nd Edition*, is vital reading for school, clinical child, and counseling psychologists as well as neuropsychologists. The book also provides rich background and practical material for graduate students entering these fields.

Child Neuropsychology

New Frontiers in Pediatric Traumatic Brain Injury provides an evidence base for clinical practice specific to traumatic brain injury (TBI) sustained during childhood, with a focus on functional outcomes. It utilizes a biological-psychosocial conceptual framework consistent with the International Classification of Functioning, Disability and Health, which highlights that biological, psychological, and social factors all play a role in disease and children's recovery from acquired brain injury. With its clinical perspective, it incorporates current and past research and evidence regarding advances that have occurred in outcomes, predictors, medical technology, and rehabilitation post-TBI. This book is great resource for established and new clinicians and researchers, graduate students, and postdoctoral fellows who work in the field of pediatric TBI, including psychologists, neuropsychologists, pediatricians, and psychiatrists.

New Frontiers in Pediatric Traumatic Brain Injury

Head trauma in children is a major public health problem. It is a leading cause of death, and it can result in a spectrum of difficulties involving cognition, academic achievement, and social interaction. Children are evolving organisms for whom a static conceptualization of outcome may cloud the effects of traumatic brain injury. This important book explores sources of unexplained variability in outcome by developmental stage. For clinicians, the volume will provide easy access into the mainstream of research on traumatic brain injury in children, its pathophysiology, treatment, and outcome. For scientists specializing in cognition and development, and for those in the basic neurosciences, the studies of traumatic brain injury discussed in this book offer a unique opportunity to relate brain structure to patterns of behavior. Modern neurodiagnostic techniques have created new possibilities for understanding the neurological basis of the diverse behavioral deficits shown by head-injured children. The contributors of this volume not only present detailed analyses of the present state of knowledge of the diverse determinants of outcome in children with head injury, but they also emphasize the gaps and limitations in our knowledge.

Head Injury in Children and Adolescents

Child Neuropsychology guides therapists and neurologists toward common goals: early, accurate diagnosis and finely focused interventions across disciplines. This groundbreaking volume brings vital perspectives to assessment and treatment. For clinical child practitioners as well as for advanced students, this book contains the essential tools needed to meet the complex challenges of diagnosing and treating brain-based illnesses.

Traumatic Head Injury in Children

This book has been replaced by Executive Skills in Children and Adolescents, Third Edition, ISBN 978-1-4625-3531-6.

Child Neuropsychology

A cutting-edge synthesis of science and practice, this book covers everything from sports-related concussions to less common types of mild traumatic brain injury (mTBI) and related complications. Preeminent authorities review what is known about mTBI in childhood and adolescence?including its biomechanics, pathophysiology, and neurological and neurobehavioral outcomes?and showcase evidence-based clinical evaluation tools and management strategies. Challenging areas such as evaluating complicated mTBI and treating persistent problems after injury are discussed in detail. Also addressed are forensic issues, injury in very early childhood, and other special-interest topics.

Executive Skills in Children and Adolescents, Second Edition

Brain injuries are common in children, typically following head trauma but also complicating meningitis, encephalitis, cerebrovascular haemorrhage (stroke) and brain tumours. Many children suffer irreversible impairments and are left with major physical, educational and behavioural disabilities. This has tremendous implications for health, education and social services. The survivors of brain injuries pose a significant burden on the NHS, the community and families. Despite this, resources are limited or non-existent in many parts of the UK and, consequently, many hospitals, schools and education authorities, and social services are unsure how to address the many problems shown by these children and their families. The new edition of 'Management of Brain Injured Children' provides a detailed account of brain injuries in children. It considers how common they are, why they occur, and

how impacts on the family. A parent's experience of having a child who suffered a severe head injury provides an invaluable contribution, as does the account of her daughter, now a teenager. The book concludes with appendices detailing useful support organisations and relevant governmental and other agencies' publications. Referencing is thorough and up-to-date, providing readers with useful sources of information for additional reading.

Mental Health and Illness of Children and Adolescents

Children, young people and families living with an acquired brain injury (ABI), whether through accident, illness, injury or abuse, are rarely offered psychological therapy, and yet the benefits of such interventions can be profound. This important new book, providing a selection of practice examples and insights from frontline practitioners, will be essential reading for any paediatric therapist or clinician. Beginning with a "life story" of the brain where emphasis is placed on how brain development is fundamentally related to its environment, the book offers key background knowledge before showcasing the core topics of assessment, psychological formulation and intervention. It features a range of therapeutic models, includes direct and indirect work, group work and family therapy, with settings varying from inpatient neurorehabilitation to community work and the transition to education. The long-term needs of those in the criminal justice system are also addressed. The closing chapters focus on the debate around effective outcome measurement and outline a vision for better services. Elevating the voices of our children, young people and families living with ABI, this pioneering book will provide practitioners with the confidence to work collaboratively across a range of children and young people with disorders of consciousness or communication to those with behaviour that challenges others to manage. It offers new ways to understand both children's pasts and their futures, and will be essential reading for anyone in the field.

Mild Traumatic Brain Injury in Children and Adolescents

Teachers have to be aware of their pupils' special educational needs. Find out what an acquired brain injury is and how to maximize learning opportunities for those with the condition with this book. The book should help you to: support pupils with an ABI by using appropriate teaching methods; be alert to the social and emotional difficulties experienced by pupils with an ABI; work in partnership with families and other professionals following helpful guidelines; and access all the information you need with a glossary of terms and a list of resources and organizations.

Management of Brain-injured Children

Traumatic brain injury (TBI) is a leading cause of death and disability in children and adolescents around the world and represents a global public health issue. Major improvements in the medical treatment of the initial injury have increased survival rates resulting in the focus shifting to consider the subsequent and longer-term cognitive, emotional and behavioral consequences for the recovering child or adolescent. These disabilities, if left untreated, continue into adulthood with consequent economic and societal costs. This book reviews the research into the consequences of TBI emphasizing the translation of new understanding into effective treatments and interventions, and identifying promising areas for further study. This will be essential reading for neuropsychologists, neurologists, psychiatrists, clinical psychologists and pediatricians.

Psychological Therapy for Paediatric Acquired Brain Injury

Pediatric neuropsychology is the practice of understanding and elucidating brain-behavior relationships as applied to children and adolescents. This 2007 volume examines trends in the assessment and treatment of common disorders including traumatic brain injuries, brain tumors, epilepsy, and autistic spectrum disorders. Its primary aim is to help practitioners and researchers identify and understand the evidence to support interventions with a range of acquired or congenital neuropsychological disorders. The text is divided into three sections. Section one provides a foundation by considering general issues relevant to assessment and treatment in pediatric neuropsychology. Section two guides practitioners in their approach to the use of interventions in a range of conditions and disorders, and the book closes with a section focusing on medical and experimental initiatives with an emphasis on interdisciplinary issues. This book is essential reading for pediatric neuropsychologists, child clinical psychologists and school psychologists, as well as pediatric neurologists and psychiatrists.

The Education of Children with Acquired Brain Injury

Trauma-Informed Practices With Children and Adolescents is a sourcebook of practical approaches to working with children and adolescents that synthesizes research from leading trauma specialists and translates it into easy-to-implement techniques. The approaches laid out address the sensory and somatic experiences of trauma within structured formats that meet the "best practices" criteria for trauma-informed care: safety, self-regulation, trauma integration, healthy relationships, and healthy environments. Each chapter contains short excerpts, case examples, and commentary relevant to the chapter topic from recognized leaders in the field of trauma intervention with children and adolescents. In addition to this, readers will find chapters filled with easily applied activities, methods, and approaches to assessment, self-regulation, trauma integration, and resilience-building. The book's structured yet comprehensive approach provides professionals with the resources they need to help trauma victims not just survive but thrive and move from victim thinking to survivor thinking using the current best practices in the field.

Pediatric Head Trauma

Teachers have to be aware of their pupil's special educational needs. This title allows teachers to find out what an acquired brain injury is and how to maximise learning opportunities for those with the condition.

Pediatric Traumatic Brain Injury

"This book will be a valuable resource for psychologists and educators who work with children or adolescents who are having difficulties with memory and learning. Translating theory and research into practice is a talent that Dr. Dehn possesses and we will benefit from his professional skills." — From the Foreword by Daniel C. Miller, PhD, ABPP, ABSNP, NCSP AN INDISPENSABLE GUIDE THAT EXAMINES THE EFFECT OF LONG-TERM MEMORY FUNCTIONS ON CHILDREN'S LEARNING Long-Term Memory Problems in Children and Adolescents: Assessment, Intervention, and Effective Instruction is the first book of its kind for psychologists, school psychologists, and special education teachers who need an overview of long-term memory as it relates to learning and education. It presents the best practices for assessing long-term memory functions, as well as selecting and using evidence-based instructional practices with memory-impaired students. This useful and timely guide bridges theory and practice to provide professional guidance with coverage of: Risk factors that can lead to long-term memory impairments How long-term memory relates to other types of memory The subcomponents and processes of long-term memory and how they relate to academic achievement What is known about the neuroanatomy of how memories are formed The developmental trajectory of memory and learning Common types of memory dysfunction Memory assessment strategies, interventions for memory problems, and instructional practices that support memory Author Milton Dehn draws on his extensive experience as a trainer and workshop presenter, school psychologist, and educator to present both the theory and research on long-term memory in children and adolescents in this book. Specific, step-by-step guidance and hands-on case studies enable professionals to identify how memory can be assessed as well as the interventions that can be linked to the results of the assessment.

Pediatric Neuropsychological Intervention

Pediatric neuropsychology is the practice of understanding and elucidating brain-behavior relationships as applied to children and adolescents. This 2007 volume examines trends in the assessment and treatment of common disorders including traumatic brain injuries, brain tumors, epilepsy, and autistic spectrum disorders. Its primary aim is to help practitioners and researchers identify and understand the evidence to support interventions with a range of acquired or congenital neuropsychological disorders. The text is divided into three sections. Section one provides a foundation by considering general issues relevant to assessment and treatment in pediatric neuropsychology. Section two guides practitioners in their approach to the use of interventions in a range of conditions and disorders, and the book closes with a section focusing on medical and experimental initiatives with an emphasis on interdisciplinary issues. This book is essential reading for pediatric neuropsychologists, child clinical psychologists and school psychologists, as well as pediatric neurologists and psychiatrists.

Trauma-Informed Practices With Children and Adolescents

Despite the increased public awareness of traumatic brain injury (TBI), the complexities of the neuropsychiatric, neuropsychological, neurological, and other physical consequences of TBI of all severities across the lifespan remain incompletely understood by patients, their families, healthcare providers, and the media. Keeping pace with advances in the diagnosis, treatment, and science of TBI, the Textbook of Traumatic Brain Injury, Third Edition, comprehensively fills this gap in knowledge. Nearly all 50 chapters feature new authors, all of them experts in their field. Chapters new to this edition include biomechanical forces, biomarkers, neurodegenerative dementias, suicide, endocrine disorders, chronic disease management, and social cognition. An entirely new section is devoted to the evaluation and treatment of mild TBI, including injuries in athletes, military service members and veterans, and children and adolescents. These chapters join newly updated sections on the assessment and treatment of the cognitive, emotional, behavioral, and other physical sequelae of TBI. The Textbook of Traumatic Brain Injury is a must-read for all of those working in any of the multitude of disciplines that contribute to the care and rehabilitation of persons with brain injury. This new volume is also a potentially useful reference for policymakers in both the public and private sectors.

Head Injury Rehabilitation

Traumatic brain injury (TBI) can seriously disrupt the social and communication skills that are basic requirements for everyday life. It is the loss of these interpersonal skills that can be the most devastating for people with TBI and their families. Although there are many books that focus upon TBI, none focus on communication and communication skills specifically. This book fills this important gap in the literature and provides information ranging from a broad overview of the nature of pathology following TBI and its effects on cognition and behaviour, through to the latest evidence about ways to assess and treat social and communication disorders. Much has changed in the field of communication disorders and TBI since the first edition of this book was published in 1999. There have been advances in neuroimaging, providing more accurate understanding of how the brain is damaged in TBI and also insights into its repair. There has been a burgeoning interest in social cognition, and advances in how communication is conceptualized, with a particular focus on the role of how context facilitates or impedes communicative ability. Most importantly, much has changed in the arena of rehabilitation. There is now a growing evidence base of treatments aimed at improving communication problems following TBI, new resources for accessing this information and renewed interest in different kinds of methods for demonstrating treatment effects. Bringing together a range of expert international researchers interested in understanding the nature and treatment of TBI this book covers topics from understanding how the brain damage occurs, how it affects social and communication skills and how these problems might be treated. As such it will be of great interest to clinicians, postgraduate and undergraduate students and researchers in neuropsychology, speech and language pathology.

Educating Children with Acquired Brain Injury

An applied guidebook for dealing with neuropsychological problems and learning disabilities. A valuable and widely utilized resource for both mental health professionals and educators.

Long-Term Memory Problems in Children and Adolescents

The aim of this work is to provide a comprehensive treatment-oriented introduction to the practice of child-clinical neuropsychology, focusing exclusively on the assessment of children and adolescents. The book has been designed specifically for those who wish to pursue education and training in this area of professional endeavor. The volume gives consideration to the following issues: treatment-oriented model of neuropsychological assessment (specification of brain-behavior relationships, dimensions of neuropsychological assessment, psychometric considerations, validity issues, modes of approach to neuropsychological interpretation, influence of demands of the environment, prediction of behavioral outcomes, development of realistic remedial plans and availability of resources for effective implementation of remedial plan, and continuing relationship between neuropsychological assessment and intervention); principles and hypotheses concerning the remediation of brain impairments in childhood and early adolescence; Variables related to the known or hypothesized brain lesion; determination of the child's remedial needs and remediable capacities, approaches to treatment (general treatment strategies, formats for intervention, treatment styles and techniques), and implementation of the remedial plan; learning disabilities (empirically derived LD subtypes, neuropsychological profiles, psychosocial typologies, and implications for treatment) and case studies (nonverbal learning disabilities and basic phonological processing disorder); and neurological disease, disorder, and dysfunction

(approach to characterization of neurological disorders) and case studies (stroke, Asperger syndrome, traumatic brain injury, brain tumor, and Tourette syndrome). This book will be of critical interest to child-clinical psychologists, neuropsychologists who specialize in the assessment and/or treatment of adults with brain impairment and have some interest in childhood disorders, pediatric neurologists, child psychiatrists, and a host of other professionals whose practice brings them in contact with children whose behavior may be affected by brain dysfunction. Indeed, for all of these professionals and those in training to become such, this book will serve as a comprehensive introduction to a systematic approach to neuropsychological assessment and intervention for children and adolescents with suspected or established brain impairment.

Pediatric Neuropsychological Intervention

A guide to treating mental health issues in children and adolescents *Diagnosis and Treatment of Children and Adolescents: A Guide for Mental Health Professionals* is a resource tailored to the particular needs of current and future counselors, behavioral healthcare clinicians, and other helping professionals working with this vulnerable population. With in-depth content broken into two sections, this book first provides a foundation in the diagnostic process by covering the underlying principles of diagnosis and treatment planning, and then applies this framework to the DSM-5 categories related to children and adolescents. With research continually reshaping our understanding of mental health, it is critical mental health professionals make decisions based on evidence-based pathways that include the specialized research around children and adolescents. The leading experts who contributed to this book share contemporary perspectives on developmental considerations, assessment information, presenting symptoms, comorbidity, levels of severity, prevalence data, and other relevant factors. Structured content of chapters provides a crosswalk between the DSM-5 and this book Updated content based upon the changes, additions, and revisions to the DSM-5 that affect diagnosis, assessment, and treatment Pedagogical features, such as learning objectives, case studies, guided practice exercises, and additional resources, to support effective learning *Diagnosis and Treatment of Children and Adolescents: A Guide for Clinical and School Settings* is a critical resource for mental health practitioners and graduate students working toward a career in a mental health profession.

Textbook of Traumatic Brain Injury

Research has shown that a range of adult psychiatric disorders and mental health problems originate at an early age, yet the psychiatric symptoms of an increasing number of children and adolescents are going unrecognized and untreated—there are simply not enough child psychiatric providers to meet this steadily rising demand. It is vital that advanced practice registered nurses (APRNs) and primary care practitioners take active roles in assessing behavioral health presentations and work collaboratively with families and other healthcare professionals to ensure that all children and adolescents receive appropriate treatment. *Child and Adolescent Behavioral Health* helps APRNs address the mental health needs of this vulnerable population, providing practical guidance on assessment guidelines, intervention and treatment strategies, indications for consultation, collaboration, referral, and more. Now in its second edition, this comprehensive and timely resource has been fully updated to include DSM-5 criteria and the latest guidance on assessing, diagnosing, and treating the most common behavioral health issues facing young people. New and expanded chapters cover topics including eating disorders, bullying and victimization, LGBTQ identity issues, and conducting research with high-risk children and adolescents. Edited and written by a team of accomplished child psychiatric and primary care practitioners, this authoritative volume: Provides state-of-the-art knowledge about specific psychiatric and behavioral health issues in multiple care settings Reviews the clinical manifestation and etiology of behavioral disorders, risk and management issues, and implications for practice, research, and education Offers approaches for interviewing children and adolescents, and strategies for integrating physical and psychiatric screening Discusses special topics such as legal and ethical issues, cultural influences, the needs of immigrant children, and child and adolescent mental health policy Features a new companion website containing clinical case studies to apply concepts from the chapters Designed to specifically address the issues faced by APRNs, *Child and Adolescent Behavioral Health* is essential reading for nurse practitioners and clinical nurse specialists, particularly those working in family, pediatric, community health, psychiatric, and mental health settings. *Second Place in the Child Health Category, 2021 American Journal of Nursing Book of the Year Awards*

Social and Communication Disorders Following Traumatic Brain Injury

Adolescents with developmental disabilities are a complex population who require specialised treatment and care. This interdisciplinary text examines the processes involved in working with this client group in forensic settings, and explores the ways in which their needs differ from those of other young people who engage in high risk behaviour or offending. The book covers assessment, intervention and treatment options for adolescents with a wide range of developmental disabilities, including autism spectrum disorders, acquired brain injury, developmental traumatology, and complex comorbidities. It describes the obstacles, challenges and opportunities to consider when working with this population, and the role played by various professionals, including forensic psychiatry and psychology, occupational therapy, physiotherapy, education, art psychotherapy and social work. The book also outlines the issues to consider when working in secure and community settings as well as the legal aspects of working with this client group, and the complex issues surrounding risk assessment. The first comprehensive account of forensic issues in adolescents with developmental disabilities, this book will be an indispensable primary resource for a wide range of professionals, including child and adolescent psychiatrists, community psychiatric nurses, developmental paediatricians, social workers and youth workers, lawyers and advocates.

Neuropsychological Assessment and Intervention with Children and Adolescents

Thesis for the Degree of Philosophiae Doctor

Practice of Child-Clinical Neuropsychology

When Lee Siegel went to India to do research for a book on Sanskrit horror literature, a friend in New Delhi told him about an itinerant teller of ghost and vampire tales, a man with clusters of amulets around his neck and a silk top hat with peacock plumes on his head. Siegel set out in search of the old man—called Brahm Kathuwala—to hear his stories and to learn about his uncommon life. But what started out as a study of other people's stories became a compelling story itself. *City of Dreadful Night* is an astonishing work of fiction, a tangle of tales that transports the reader from the Medieval India of magicians, witches, and vampires, through the British India of Brahm Kathuwala's childhood, into the chaos and political terror of contemporary India. Vividly recreating Indian literary and oral traditions, Siegel weaves a web of possession, reincarnation, and magical transformation unlike any found in the Western tradition. Flesh-eating demons, Rajiv Gandhi's assassin, even Bram Stoker and Dracula populate the serpentine narrative, which intermingles stories about the characters with the terrifying tales they tell. Siegel pursues Brahm Kathuwala from the ghastly lights of the cremation ground at Banaras through villages all over north India. Brahm's life story is revealed through countless tales along the way. We learn that he was raised, and abandoned, by two mothers—one the destitute floor sweeper who bore him; the other her employer, a wealthy Irish woman who read and reread to him the story of Dracula. We hear of his marriage to the daughter of a cremation ground attendant, his battles against her demonic possession, and their painful parting. We come to understand the daily life and motivations of this "horror professional," who uses terrifying tales to ward off the evil he himself fears. This unorthodox book is more than a story; it blends scholarship, fantasy, travelogue, and autobiography—fusing and overlapping historical accounts and newscasts, literary texts and films, dreams and nocturnal tales. Siegel uses imagination to explore the relation of real terror to horror fiction and to contemplate the ways fear and disgust become thrilling elements in stories of the macabre. This book is the product of Siegel's deep knowledge of both Indian and Western literary and philosophical traditions. It is also an attempt to come to grips with the omnipresence of political and religious terror in contemporary India. Shocking, original, beautifully written, *City of Dreadful Night* offers readers a captivating immersion in the wonder and terror of India, past and present.
