The Epistemology of Utopia

The emergence of Utopian Studies as a dynamic field of inquiry situated at the crossroads of several disciplines is a striking development of the past few decades. It is symptomatic of a general trend towards the overcoming of epistemological and institutional boundaries, and has borne fruit in a number of ways. The traditions of utopianism have come to be valued as an important nurturing of possibilities, devoted to the critique and the transformation of the world. By undertaking the critical interrogation of the given, utopia is a figure not only of inversion, but of transcendence and fulfilment. The present volume takes into account the international development of Utopian Studies in recent decades. Its aim is to provide critical revisions (revisitings) of the assumptions and methods of the discipline through a set of theoretically-informed essays that focus on a number of different manifestations of utopianism. The topics covered range from Plato's Republic and More's Utopia to modern-day cosmopolitics, "glocalization", and the intersections of fiction with esotericism and science.

Barthes and Utopia explores the central role of utopias throughout the work of Roland Barthes, from demystification to structuralism, from textuality and sexual hedonism to his final preoccupation with love and mourning. Drawing on an unusually wide range of texts, Knight goes to the heart of Barthes's imaginative processes, his affective world, and his idiosyncratic value system. But, because utopia is the meeting point of Barthes's lifelong concern with the relationship between history, language, and sexuality, her study also inserts Barthes's work into larger political and theoretical concerns, in particular into ongoing debates around Orientalism and homosexuality.

This book explores a philosophy of learning inspired by humanistic ideals. It reflects on the transformative possibilities opened up by active engagement with experiential domains. It draws attention to epoch-making transformations in the history of Western civilization that have exposed the dynamic relation between conscience, emotions, and learning. An ecological model of learning is proposed that emphasizes emotional, ethical, and cognitive learning as holistic processes. The model focuses on the pragmatics of learning, the creativity of improvisation, rhetorically mediated experience, emotional settings, and the education of the senses. The book is based on an inclusive worldview. Its fundamental tenet is that rational inquiry, emotions, and morality form a continuum in human nature. Hence the book envisions novel scenarios, where learners are valued for their genuine struggle to realize their humane masterpieces.
