

God And Empire

[#divine right of kings](#) [#religious imperialism](#) [#church and state](#) [#political theology](#) [#power and faith](#)

Explore the complex and often intertwined relationship between divine authority and temporal power structures. This topic delves into how religious beliefs have historically shaped empires, justified their rule, influenced political systems, and sparked conflicts, examining the enduring tension and collaboration between spiritual and worldly dominion across civilizations.

Our thesis archive continues to grow with new academic contributions every semester.

We truly appreciate your visit to our website.

Health, 'Race' and Empire: Popular-Scientific Spectacles and National Identity in Imperial Germany, 1871-1914

Establishing the context within which organizers who staged spectacular popular science exhibitions for urban middle-class audiences and the physicians as well as activists who provided commentaries functioned; this dissertation is a study in social history that seeks to determine how presentations of what it meant to be German evolved from the 1870s to the eve of the Great War in 1914. Research topics include: * Hagenbeck's Ethnographic People Shows * The Berlin Hygiene Exhibition of 1883 * The Berlin Trade & Colonial Fair of 1896 * Karl August Lingner, mouthwash magnate, philanthropist and innovator of the textbook-style exhibit * Taking the first major international health exhibition from idea to reality * The International Hygiene Exhibition in Dresden in 1911 *** [Reprint of Dissertation with Minor Corrections and New Pagination]

Difference and Disease

Before the nineteenth century, travellers who left Britain for the Americas, West Africa, India and elsewhere encountered a medical conundrum: why did they fall ill when they arrived, and why - if they recovered - did they never become so ill again? The widely accepted answer was that the newcomers

needed to become 'seasoned to the climate'. Suman Seth explores forms of eighteenth-century medical knowledge, including conceptions of seasoning, showing how geographical location was essential to this knowledge and helped to define relationships between Britain and her far-flung colonies. In this period, debates raged between medical practitioners over whether diseases changed in different climes. Different diseases were deemed characteristic of different races and genders, and medical practitioners were thus deeply involved in contestations over race and the legitimacy of the abolitionist cause. In this innovative and engaging history, Seth offers dramatically new ways to understand the mutual shaping of medicine, race, and empire.

Difference and Disease

Suman Seth reveals how histories of medicine, empire, race and slavery intertwined in the eighteenth-century British Empire.

Fit to Practice

Traces the history of the British General Medical Council to reveal the persistence of hierarchies of gender, national identity, and race in determining who was fit to practice British medicine.

Race and empire

Race and empire tells the story of a short-lived but vehement eugenics movement that emerged among a group of Europeans in Kenya in the 1930s, unleashing a set of writings on racial differences in intelligence more extreme than that emanating from any other British colony in the twentieth century. The Kenyan eugenics movement of the 1930s adapted British ideas to the colonial environment: in all its extremity, Kenyan eugenics was not simply a bizarre and embarrassing colonial mutation, as it was later dismissed, but a logical extension of British eugenics in a colonial context. By tracing the history of eugenic thought in Kenya, the book shows how the movement took on a distinctive colonial character, driven by settler political preoccupations and reacting to increasingly outspoken African demands for better, and more independent, education. Through a close examination of attitudes towards race and intelligence in a British colony, Race and empire reveals how eugenics was central to colonial racial theories before World War Two.

Education and Race from Empire to Brexit

Covering the period from the height of Empire to Brexit and beyond, this book shows how the vote to leave the European Union increased hostilities towards racial and ethnic minorities and migrants. Concentrating on the education system, it asks whether populist views that there should be a British identity - or a Scottish, Irish or Welsh one - will prevail. Alternatively arguments based on equality, human rights and economic needs may prove more powerful. It covers events in politics and education that have left most white British people ignorant of the Empire, the often brutal de-colonisation and the arrival of immigrants from post-colonial and European countries. It discusses politics and practices in education, race, religion and migration that have left schools and universities failing to engage with a multiracial and multicultural society.

Race and Empire

Readers at the beginning of the twenty-first century are probably more racially self-aware than any other generation has been. Like the relationship between gender and history, that between race and history is perceived to be of the utmost importance by young people and the older generation because it has left such a controversial legacy in the shape of hopes for multiculturalism, diversity, and tolerance. This new Seminar Study provides an introduction to the intricate and far-reaching relationship between attitudes toward racial difference and imperial expansion. Imperialism is a topic that can be approached from many different angles. By concentrating on the topical issue of race, this book takes a very different approach from the more familiar political or economic studies of imperial expansion.

Medicine, Race and Liberalism in British Bengal

This book focuses on the entwinement of politics and medicine and power and knowledge in India during the age of empire. Using the powerful metaphor of 'pathology' - the science of the origin, nature, and course of diseases - the author develops and challenges a burgeoning literature on colonial medicine, moving beyond discussions of state medicine and the control of epidemics to everyday life,

to show how medicine was a fundamental ideology of empire. Related to this point, and engaging with postcolonial histories of biopower and modernity, the book highlights the use of this racially grounded medicine in the formulation of modern selves and subjectivities in late colonial India. In tracing the cultural determinants of biological race theory and contextualizing the understanding of race as pathology, the book demonstrates how racialism was compatible with the ideologies and policies of imperial liberalism. *Medicine, Race and Liberalism in British Bengal* brings together the study of modern South Asia, race theory, colonialism and empire and the history of medicine. It highlights the powerful role played by the idea of 'pathology' in the rationalization of imperial liberalism and the subsequent projects of modernity embraced by native experts in Bengal in the 'long' nineteenth century.

***RADIO 4 BOOK OF THE WEEK* SHORTLISTED FOR THE JAMES TAIT BLACK PRIZE | THE JHALAK PRIZE | THE BREAD AND ROSES AWARD & LONGLISTED FOR THE ORWELL PRIZE FOR POLITICAL WRITING** 'This is the book I've been waiting for - for years. It's personal, historical, political, and it speaks to where we are now' Benjamin Zephaniah 'I recommend *Natives* to everyone' Candice Carty-Williams From the first time he was stopped and searched as a child, to the day he realised his mum was white, to his first encounters with racist teachers - race and class have shaped Akala's life and outlook. In this unique book he takes his own experiences and widens them out to look at the social, historical and political factors that have left us where we are today. Covering everything from the police, education and identity to politics, sexual objectification and the far right, *Natives* speaks directly to British denial and squeamishness when it comes to confronting issues of race and class that are at the heart of the legacy of Britain's racialised empire. *Natives* is the searing modern polemic and Sunday Times bestseller from the BAFTA and MOBO award-winning musician and political commentator, Akala. 'The kind of disruptive, aggressive intellect that a new generation is closely watching' Afua Hirsch, Observer 'Part biography, part polemic, this powerful, wide-ranging study picks apart the British myth of meritocracy' David Olusoga, Guardian 'Inspiring' Madani Younis, Guardian 'Lucid, wide-ranging' John Kerrigan, TLS 'A potent combination of autobiography and political history which holds up a mirror to contemporary Britain' Independent 'Trenchant and highly persuasive' Metro 'A history lesson of the kind you should get in school but don't' Stylist

Empire, Race and Global Justice

The first volume to explore the role of race and empire in political theory debates over global justice.

Bordering Britain

(B)ordering Britain argues that Britain is the spoils of empire, its immigration law is colonial violence and irregular immigration is anti-colonial resistance. In announcing itself as postcolonial through immigration and nationality laws passed in the 60s, 70s and 80s, Britain cut itself off symbolically and physically from its colonies and the Commonwealth, taking with it what it had plundered. This imperial vanishing act cast Britain's colonial history into the shadows. The British Empire, about which Britons know little, can be remembered fondly as a moment of past glory, as a gift once given to the world. Meanwhile immigration laws are justified on the basis that they keep the undeserving hordes out. In fact, immigration laws are acts of colonial seizure and violence. They obstruct the vast majority of racialised people from accessing colonial wealth amassed in the course of colonial conquest. Regardless of what the law, media and political discourse dictate, people with personal, ancestral or geographical links to colonialism, or those existing under the weight of its legacy of race and racism, have every right to come to Britain and take back what is theirs.

The Cambridge Companion to Nineteenth-Century Thought

Leading historians introduce the most influential trends in thought which originated or developed in the nineteenth century.

Race over Empire

Generations of historians have maintained that in the last decade of the nineteenth century white-supremacist racial ideologies such as Anglo-Saxonism, social Darwinism, benevolent assimilation, and the concept of the "white man's burden" drove American imperialist ventures in the nonwhite world. In *Race over Empire*, Eric T. L. Love contests this view and argues that racism had nearly the opposite

effect. From President Grant's attempt to acquire the Dominican Republic in 1870 to the annexations of Hawaii and the Philippines in 1898, Love demonstrates that the imperialists' relationship with the racist ideologies of the era was antagonistic, not harmonious. In a period marked by Jim Crow, lynching, Chinese exclusion, and immigration restriction, Love argues, no pragmatic politician wanted to place nonwhites at the center of an already controversial project by invoking the concept of the "white man's burden." Furthermore, convictions that defined "whiteness" raised great obstacles to imperialist ambitions, particularly when expansionists entered the tropical zone. In lands thought to be too hot for "white blood," white Americans could never be the main beneficiaries of empire. What emerges from Love's analysis is a critical reinterpretation of the complex interactions between politics, race, labor, immigration, and foreign relations at the dawn of the American century.

Race, Place, and Medicine

Race, Place, and Medicine examines the impact of a group of nineteenth-century Brazilian physicians who became known posthumously as the Bahian Tropicalista School of Medicine. Julyan G. Peard explores how this group of obscure clinicians became participants in an international debate as they helped change the scientific framework and practices of doctors in Brazil. Peard shows how the Tropicalistas adapted Western medicine and challenged the Brazilian medical status quo in order to find new answers to the old question of whether the diseases of warm climates were distinct from those of temperate Europe. They carried out innovative research on parasitology, herpetology, and tropical disorders, providing evidence that countered European assumptions about Brazilian racial and cultural inferiority. In the face of European fatalism about health care in the tropics, the Tropicalistas forged a distinctive medicine based on their beliefs that public health would improve only if large social issues—such as slavery and abolition—were addressed and that the delivery of health care should encompass groups hitherto outside the doctors' sphere, especially women. But the Tropicalistas' agenda, which included biting social critiques and broad demands for the extension of health measures to all of Brazil's people, was not sustained. *Race, Place, and Medicine* shows how imported models of tropical medicine—constructed by colonial nations for their own needs—downplayed the connection between socioeconomic factors and tropical disorders. This study of a neglected episode in Latin American history will interest Brazilianists, as well as scholars of Latin American, medical, and scientific history.

Maladies of Empire

A sweeping global history that looks beyond European urban centers to show how slavery, colonialism, and war propelled the development of modern medicine. Most stories of medical progress come with ready-made heroes. John Snow traced the origins of London's 1854 cholera outbreak to a water pump, leading to the birth of epidemiology. Florence Nightingale's contributions to the care of soldiers in the Crimean War revolutionized medical hygiene, transforming hospitals from crucibles of infection to sanctuaries of recuperation. Yet histories of individual innovators ignore many key sources of medical knowledge, especially when it comes to the science of infectious disease. Reexamining the foundations of modern medicine, Jim Downs shows that the study of infectious disease depended crucially on the unrecognized contributions of nonconsenting subjects—conscripted soldiers, enslaved people, and subjects of empire. Plantations, slave ships, and battlefields were the laboratories in which physicians came to understand the spread of disease. Military doctors learned about the importance of air quality by monitoring Africans confined to the bottom of slave ships. Statisticians charted cholera outbreaks by surveilling Muslims in British-dominated territories returning from their annual pilgrimage. The field hospitals of the Crimean War and the US Civil War were carefully observed experiments in disease transmission. The scientific knowledge derived from discarding and exploiting human life is now the basis of our ability to protect humanity from epidemics. Boldly argued and eye-opening, *Maladies of Empire* gives a full account of the true price of medical progress.

Prostitution, Race and Politics

In addition to shouldering the blame for the increasing incidence of venereal disease among sailors and soldiers, prostitutes throughout the British Empire also bore the burden of the contagious diseases ordinances that the British government passed. By studying how British authorities enforced these laws in four colonial sites between the 1860s and the end of the First World War, Philippa Levine reveals how myths and prejudices about the sexual practices of colonized peoples not only had a direct and often

punishing effect on how the laws operated, but how they also further justified the distinction between the colonizer and the colonized.

Race for Empire

Race for Empire offers a profound and challenging reinterpretation of nationalism, racism, and wartime mobilization during the Asia-Pacific war. In parallel case studies—of Japanese Americans mobilized to serve in the United States Army and of Koreans recruited or drafted into the Japanese military—T. Fujitani examines the U.S. and Japanese empires as they struggled to manage racialized populations while waging total war. Fujitani probes governmental policies and analyzes representations of these soldiers—on film, in literature, and in archival documents—to reveal how characteristics of racism, nationalism, capitalism, gender politics, and the family changed on both sides. He demonstrates that the United States and Japan became increasingly alike over the course of the war, perhaps most tellingly in their common attempts to disavow racism even as they reproduced it in new ways and forms.

Race And Education: Policy And Politics In Britain

Provides crucial information on key educational issues, events and conflicts in Britain from the 1960s to the present day.

The Affect of Difference

The Affect of Difference is a collection of essays offering a new perspective on the history of race and racial ideologies in modern East Asia. Contributors approach this subject through the exploration of everyday culture from a range of academic disciplines, each working to show how race was made visible and present as a potential means of identification. By analyzing artifacts from diverse media including travelogues, records of speech, photographs, radio broadcasts, surgical techniques, tattoos, anthropometric postcards, fiction, the popular press, film and soundtracks—an archive that chronicles the quotidian experiences of the colonized—their essays shed light on the politics of inclusion and exclusion that underpinned Japanese empire. One way this volume sets itself apart is in its use of affect as a key analytical category. Colonial politics depended heavily on the sentiments and moods aroused by media representations of race, and authorities promoted strategies that included the colonized as imperial subjects while simultaneously excluding them on the basis of "natural" differences. Chapters demonstrate how this dynamic operated by showing the close attention of empire to intimate matters including language, dress, sexuality, family, and hygiene. The focus on affect elucidates the representational logic of both imperialist and racist discourses by providing a way to talk about inequalities that are not clear cut, to show gradations of power or shifts in definitions of normality that are otherwise difficult to discern, and to present a finely grained perspective on everyday life under racist empire. It also alerts us to the subtle, often unseen ways in which imperial or racist affects may operate beyond the reach of our methodologies. Taken together, the essays in this volume bring the case of Japanese empire into comparative proximity with other imperial situations and contribute to a deeper, more sophisticated understanding of the role that race has played in East Asian empire.

Ethnicity and Race in the UK

Available Open Access under CC-BY-NC licence. 50 years after the establishment of the Runnymede Trust and the Race Relations Act of 1968 which sought to end discrimination in public life, this accessible book provides commentary by some of the UK's foremost scholars of race and ethnicity on data relating to a wide range of sectors of society, including employment, health, education, criminal justice, housing and representation in the arts and media. It explores what progress has been made, identifies those areas where inequalities remain stubbornly resistant to change, and asks how our thinking around race and ethnicity has changed in an era of Islamophobia, Brexit and an increasingly diverse population.

The Cultivation of Whiteness

A history of the role of biological theories in the construction and "protection" of whiteness in Australia from the first European settlement through World War II.

Contagions of Empire

From 1898 onward, the expansion of American militarism and empire abroad increasingly relied on black labor, even as policy remained inflected both by scientific racism and by fears of contagion. Black men and women were mobilized for service in the Spanish-Cuban-American War under the War Department's belief that Southern blacks carried an immunity against tropical diseases. Later, in World Wars I and II, black troops were stigmatized as members of a contagious "venereal race," and were subjected to experimental medical treatments meant to curtail their sexual desires. By turns feared as contagious, and at other times valued for their immunity, black men and women played an important part in the U.S. military's conscription of racial, gender, and sexual difference, even as they exercised their embattled agency at home and abroad. By following the scientific, medical, and cultural history of African American enlistment through the archive of American militarism, this book traces the black subjects and agents of empire as they came into contact with a world globalized by warfare.

Race, Empire, and the Idea of Human Development

In an exciting new study of ideas accompanying the rise of the West, Thomas McCarthy analyzes the ideologies of race and empire that were integral to European-American expansion. He highlights the central role that conceptions of human development (civilization, progress, modernization, and the like) played in answering challenges to legitimacy through a hierarchical ordering of difference. Focusing on Kant and natural history in the eighteenth century, Mill and social Darwinism in the nineteenth, and theories of development and modernization in the twentieth, he proposes a critical theory of development which can counter contemporary neoracism and neoimperialism, and can accommodate the multiple modernities now taking shape. Offering an unusual perspective on the past and present of our globalizing world, this book will appeal to scholars and advanced students of philosophy, political theory, the history of ideas, racial and ethnic studies, social theory, and cultural studies.

Climates & Constitutions

The first major study of European attitudes towards India's climate and their bearing on imperial expansion, this book shows how growing fears about racial degeneration led to the abandonment of plans for white colonization. It also considers European strategies for coping with Indian climate and explains the emergence of modern concepts of race.

Medicine and Empire

The history of modern medicine is inseparable from the history of imperialism. *Medicine and Empire* provides an introduction to this shared history – spanning three centuries and covering British, French and Spanish imperial histories in Africa, Asia and America. Exploring the major developments in European medicine from the seventeenth century to the mid-twentieth century, Pratik Chakrabarti shows that the major developments in European medicine had a colonial counterpart and were closely intertwined with European activities overseas:

- The increasing influence of natural history on medicine
- The growth of European drug markets
- The rise of surgeons in status
- Ideas of race and racism
- Advancements in sanitation and public health
- The expansion of the modern quarantine system

The emergence of Germ theory and global vaccination campaigns Drawing on recent scholarship and primary texts, this book narrates a mutually constitutive history in which medicine was both a 'tool' and a product of imperialism, and provides an original, accessible insight into the deep historical roots of the problems that plague global health today.

Race, Empire and First World War Writing

Drawing upon fresh archival material this book recovers the experience of different ethnic groups during the First World War conflict.

Reproducing Empire

Original and compelling, Laura Briggs's *Reproducing Empire* shows how, for both Puerto Ricans and North Americans, ideologies of sexuality, reproduction, and gender have shaped relations between the island and the mainland. From science to public policy, the "culture of poverty" to overpopulation, feminism to Puerto Rican nationalism, this book uncovers the persistence of concerns about motherhood, prostitution, and family in shaping the beliefs and practices of virtually every player in the twentieth-century drama of Puerto Rican colonialism. In this way, it sheds light on the legacies haunting contemporary debates over globalization. Puerto Rico is a perfect lens through which to

examine colonialism and globalization because for the past century it has been where the United States has expressed and fine-tuned its attitudes toward its own expansionism. Puerto Rico's history holds no simple lessons for present-day debate over globalization but does unearth some of its history. *Reproducing Empire* suggests that interventionist discourses of rescue, family, and sexuality fueled U.S. imperial projects and organized American colonialism. Through the politics, biology, and medicine of eugenics, prostitution, and birth control, the United States has justified its presence in the territory's politics and society. Briggs makes an innovative contribution to Puerto Rican and U.S. history, effectively arguing that gender has been crucial to the relationship between the United States and Puerto Rico, and more broadly, to U.S. expansion elsewhere.

The Cambridge History of French Thought

French thinkers have revolutionized European thought about knowledge, religion, politics, and society. Delivering a comprehensive history of thought in France from the Middle Ages to the present, this book follows themes and developments of thought across the centuries. It provides readers with studies of both systematic thinkers and those who operate less systematically, through essays or fragments, and places them all in their many contexts. Informed by up-to-date research, these accessible chapters are written by prominent experts in their fields who investigate key concepts in non-technical language. Chapters feature treatments of specific thinkers as individuals including Voltaire, Rousseau, Descartes and Derrida, but also more general movements and schools of thought from humanism to liberalism, via the Enlightenment, Romanticism, Marxism, and feminism. Furthermore, the influence of gender, race, empire and slavery are investigated to offer a broad and fulfilling account of French thought throughout the ages.

Educating the Empire

Examines the contested process of colonial education in the Philippines in the aftermath of the Spanish-American War.

The Heart of the Race

A powerful document of the day-to-day realities of Black women in Britain *The Heart of the Race* is a powerful corrective to a version of Britain's history from which black women have long been excluded. It reclaims and records black women's place in that history, documenting their day-to-day struggles, their experiences of education, work and health care, and the personal and political struggles they have waged to preserve a sense of identity and community. First published in 1985 and winner of the Martin Luther King Memorial Prize that year, *The Heart of the Race* is a testimony to the collective experience of black women in Britain, and their relationship to the British state throughout its long history of slavery, empire and colonialism. This new edition includes a foreword by Lola Okolosie and an interview with the authors, chaired by Heidi Safia Mirza, focusing on the impact of their book since publication and its continuing relevance today

Chosen peoples

Chosen peoples demonstrates how biblical themes, ideas and metaphors shaped racial, national and imperial identities in the long nineteenth century. Even as radical new ideas challenged the historicity of the Bible, biblical notions of lineage, descent and inheritance continued to inform understandings of race, nation and empire. European settler movements portrayed 'new' territories across the seas as lands of Canaan, but if many colonised and conquered peoples resisted the imposition of biblical narratives, they also appropriated biblical tropes to their own ends. These innovative case-studies throw new light on familiar areas such as slavery, colonialism and the missionary project, while forging exciting cross-comparisons between race, identity and the politics of biblical translation and interpretation in South Africa, Egypt, Australia, America and Ireland.

Imperial medicine and indigenous societies

In recent years it has become apparent that the interaction of imperialism with disease, medical research, and the administration of health policies is considerably more complex. This book reflects the breadth and interdisciplinary range of current scholarship applied to a variety of imperial experiences in different continents. Common themes and widely applicable modes of analysis emerge include the confrontation between indigenous and western medical systems, the role of medicine in war and

resistance, and the nature of approaches to mental health. The book identifies disease and medicine as a site of contact, conflict and possible eventual convergence between western rulers and indigenous peoples, and illustrates the contradictions and rivalries within the imperial order. The causes and consequences of this rapid transition from white man's medicine to public health during the latter decades of the nineteenth and early years of the twentieth centuries are touched upon. By the late 1850s, each of the presidency towns of Calcutta, Bombay and Madras could boast its own 'asylum for the European insane'; about twenty 'native lunatic asylums' had been established in provincial towns. To many nineteenth-century British medical officers smallpox was 'the scourge of India'. Following the British discovery in 1901 of a major sleeping sickness epidemic in Uganda, King Leopold of Belgium invited the recently established Liverpool School of Tropical Medicine to examine his Congo Free State. Cholera claimed its victims from all levels of society, including Americans, prominent Filipinos, Chinese, and Spaniards.

Public Health in the British Empire

Over the last several decades, historians of public health in Britain's colonies have been primarily concerned with the process of policy making in the upper echelons of the medical and sanitary administrations. Yet it was the lower level staff that formed the backbone of public health systems in the colonies. Although they constituted the bases of many colonies' public health machinery, there is no consolidated study of these individuals to date. *Public Health in the British Empire* addresses this gap by bringing together historians studying intermediary and subordinate staff across the British Empire. Along with investigating the duties and responsibilities of medical and non-medical intermediary and subordinate personnel, the contributors to this volume show how the subjectivity of these agents influenced the manner in which they discharged their duties and how this in turn shaped policy. Even those working as low level assistants and aids were able to affect policy design. In this way, *Public Health in the British Empire* brings into sharp relief the disaggregated nature of the empire, thereby challenging the understanding of the imperial project as an enterprise conceived of and driven from the center.

Mental Health, Race and Culture

This powerful text offers a unique analysis of the impact of race and culture on contemporary issues in mental health. Drawing on extensive international experience, Fernando challenges the traditional ideas that inform practice in clinical psychology and psychiatry in order to promote new and alternative ways of thinking. Covering both theoretical perspectives and practical implications, this insightful text discusses perceptions of ethnicity and identity, compares practices around the world and looks at racism in mental health services. This fully revised, expanded and updated edition of a seminal text offers students and practitioners alike a comprehensive and reliable study of both western and non-western psychiatry and mental health practices. New to this Edition: - Covers trauma and psychosocial support - Looks at the new discourses in mental health of recovery, spirituality and well-being - Examines the mental health of refugees - Refers to specific developments in low-income countries, including Asia and Africa

Fit to be Citizens?

Shows how science and public health shaped the meaning of race in the early twentieth century. Examining the experiences of Mexican, Japanese, and Chinese immigrants in Los Angeles, this book illustrates the ways health officials used complexly constructed concerns about public health to demean, diminish, discipline, and define racial groups.

Leprosy and Empire

An innovative, interdisciplinary study of why leprosy, a disease with a very low level of infection, has repeatedly provoked revulsion and fear. Rod Edmond explores, in particular, how these reactions were refashioned in the modern colonial period. Beginning as a medical history, the book broadens into an examination of how Britain and its colonies responded to the believed spread of leprosy. Across the empire this involved isolating victims of the disease in 'colonies', often on offshore islands. Discussion of the segregation of lepers is then extended to analogous examples of this practice, which, it is argued, has been an essential part of the repertoire of colonialism in the modern period. The book also examines literary representations of leprosy in Romantic, Victorian and twentieth-century writing,

and concludes with a discussion of traveller-writers such as R. L. Stevenson and Graham Greene who described and fictionalised their experience of staying in a leper colony.

Gender, Race, and the Writing of Empire

An examination of the impact of ideas of race and gender on late Victorian imperialism.

Ornamentalism

Ornamentalism is a vividly evocative account of a vanished era, a major reassessment of Britain and its imperial past, and a trenchant and disturbing analysis of what it means to be a post-imperial nation today.

Bland Fanatics

A wide-ranging, controversial collection of critical essays on the political mania plaguing the West by one of the most important public intellectuals of our time. In America and in England, faltering economies at home and failed wars abroad have generated a political and intellectual hysteria. It is a derangement manifested in a number of ways: nostalgia for imperialism, xenophobic paranoia, and denunciations of an allegedly intolerant left. These symptoms can be found even among the most informed of Anglo-America. In *Bland Fanatics*, Pankaj Mishra examines the politics and culture of this hysteria, challenging the dominant establishment discourses of our times. In essays that grapple with the meaning and content of Anglo-American liberalism and its relations with colonialism, the global South, Islam, and "humanitarian" war, Mishra confronts writers such as Jordan Peterson, Niall Ferguson, and Salman Rushdie. He describes the doubling down of an intelligentsia against a background of weakening Anglo-American hegemony, and he explores the commitments of Ta-Nehisi Coates and the ideological determinations of *The Economist*. These essays provide a vantage point from which to understand the current crisis and its deep origins.

The Colours of the Empire

The Portuguese Colonial Empire established its base in Africa in the fifteenth century and would not be dissolved until 1975. This book investigates how the different populations under Portuguese rule were represented within the context of the Colonial Empire by examining the relationship between these representations and the meanings attached to the notion of 'race'. Colour, for example, an apparently objective criterion of classification, became a synonym or near-synonym for 'race', a more abstract notion for which attempts were made to establish scientific credibility. Through her analysis of government documents, colonial propaganda materials and interviews, the author employs an anthropological perspective to examine how the existence of racist theories, originating in the eighteenth and nineteenth centuries, went on to inform the policy of the Estado Novo (Second Republic, 1933–1974) and the production of academic literature on 'race' in Portugal. This study provides insight into the relationship between the racist formulations disseminated in Portugal and the racist theories produced from the eighteenth century onward in Europe and beyond.
