Work in the 21st Century

The faking of personality tests in a selection context has been perceived as somewhat of a nuisance variable, and largely ignored, or glossed over by the academic literature. Instead of examining the phenomenon many researchers have ignored its existence, or trivialized the impact of faking on personality measurement. The present volume is a much needed, timely corrective to this attitude. In a wide range of chapters representing different philosophical and empirical approaches, the assembled authors demonstrate the courage to tackle this important and difficult topic head-on, as it deserves to be. The writers of these chapters identify two critical concerns with faking. First, if people fake their responses to personality tests, the resulting scores and the inferences drawn from them might become invalid. For example, people who fake their responses by describing themselves as diligent and prompt might earn better conscientiousness scores, and therefore be hired for jobs requiring this trait that in fact they might not perform satisfactorily. Second, the dishonesty of the faker might itself be a problem, separate from its effect on a particular score. Someone who lies on a pre-employment test might also lie about the hours he or she works, or how much cash is in the till at the end of the shift. Worse, these two problems might exacerbate each other: a dishonest applicant might get higher scores on the traits the employer desires through his or her lying, whereas the compulsively honest applicant might get low scores as an ironic penalty for being honest. Outcomes like these harm employers and applicants alike. The more one delves into the complexities of faking, as the authors of the chapters in this volume do so thoroughly and so well, the more one will recognize that this seemingly specialized topic ties directly to more general issues in psychology. One of these is test validity. The bottom-line question about any test score, faked or not, is whether it will predict the behaviors and outcomes that it is designed to predict. As Johnson and Hogan point out in their chapter, the behavior of someone faking a test is a subset of the behavior of the person in his or her entire life, and the critical research question concerns the degree to which and manner in which behavior in one domain generalizes to behavior in other domains. This observation illuminates the fact that the topic of faking is also a key part of understanding the relationship between personality and behavior. The central goal of theoretical psychology is to understand why people do the things they do. The central goal of applied psychology is to predict what someone will do in the future. Both of these goals come together in the study of applicant faking.

The use of integrity tests for pre-employment screening.

In recent years, personality assessment by professional psychologists has taken on an increasingly important role in the field of police work. Most importantly, personality assessment instruments have been utilized in the pre-employment psychological screening of police officer candidates. This psychological screening takes place at the end of the hiring process to ensure that candidates do not have personality characteristics or existing psychopathology that would interfere with their job performance. Personality assessment is also used for other applications in police psychology. These applications include fitness-for-duty evaluations (FFDEs) and second opinion evaluations of officers who challenge hiring decisions. Moreover, police psychologists are involved in a considerable amount of research in order to determine which tests and scales are most appropriate for evaluations. The present volume is divided into four parts to cover the relevant issues in personality assessment for police work. Part I provides an introduction and the basic principles of personality assessment in police psychology. Part II focuses on the major assessment instruments used in police psychology. These include the MMPI-2, the Personality Assessment Inventory (PAI), the Inwald Personality Inventory (IPI) and Hilson Tests, the M-PULSE Inventory, pre-offer integrity instruments, and the Rorschach Comprehensive System. Part III examines multiple issues in personality assessment research in the field of police psychology. Part IV covers applications of personality assessment in police psychology. These applications include pre-employment evaluations, fitness for duty evaluations, conditional second opinion psychological evaluations of candidates, using multiple sources of information when conducting mandatory or required evaluations, and the politics of personality assessment in police agencies. This unique and comprehensive text is designed for psychologists who are actively working in the field of law enforcement, including psychologists in both applied and research/academic settings.

Handbook of Research on Education and Technology in a Changing Society

The *Handbook of Police Psychology* represents the contributions of over thirty police psychologists, all experts in their field, on the core subject matters of police psychology. Police psychology is broadly defined as the application of psychological principles and methods to law enforcement. This growing area includes topics such as screening and hiring of police officers; conducting screening for special squads (e.g., SWAT); fitness-for-duty evaluations; investigations, hostage negotiations; training and consultation, and stress counseling, among others. The book examines the beginnings of police psychology and early influences on the profession such as experimental investigations of psychological testing on police attitude and performance. Influential figures in the field of police psychology are

discussed, including the nation's first full-time police psychologist who served on the Los Angeles Police Department, and the first full-time police officer to earn a doctorate in psychology while still in uniform with the New York Police Department.
