Praise for A-HA! Performance "Since I wrote Choice Theory many years ago, I have come to the conclusion that there is only one major human problem: we have yet to figure out how to get along well with each other. In this book, Walker supports this conclusion with humor, creativity, and great insight. Managers who both follow his suggestions and teach them to those they manage will be rewarded with a happy and profitable workplace. And do it at less cost than the company is spending now."

--William Glasser, MD, President and founder, William Glasser Institute, and author of Choice Theory and Reality Therapy "If ever there was a title that perfectly matched the content of a book, this is it. I have never experienced more a-ha's from a book in my life. One of the biggest a-ha's is that

you don't build a motivated workforce--you already have one! If you manage people--and especially if you aspire to truly lead people--then this book is required reading. Rock-solid ideas from a master on motivation." --Joe Calloway, author of Work Like You're Showing Off! "An amazingly practical and prodigiously useful resource to help create and bolster a world-class sales force, but also a blueprint for better living in general. An absolute mandatory read for all my employees, not to mention friends and family members. I don't know anyone who couldn't benefit from applying the A-HA model. The title might be more apropos if it were 'Holy cow! Where's this been my whole career?'" --Robert H. Fleet, Branch Manager, National Builder Division, Countrywide Home Loans "A-HA! Performance should be mandatory reading for every manager. Each chapter offers simple and compelling methods for building

and managing a self-motivated workforce. The realistic examples presented throughout the book reinforce the steps in the A-HA model and provide the foundation for easy application to professional and personal situations." --Ann Owens, Vice President, Total Rewards Management, QUALCOMM

"Avoiding a fight-or-flight reaction from an employee who needs coaching on improved performance or behavior changes requires the manager understand the employee's vested interest. Walker teaches the skills required to effectively create three wins: for the company, the employee, and the manager. It's a must-read for all leaders who want to be more proficient in getting needed performance changes from their employees by improving their own nurturing, coaching, or mentoring skills. I'm reading it for the third time and still gleaning more tips and insights. Even though it's constructed as a managerial self-help book, it's really an insightful, powerful textbook, and as such needs to be studied." --Ron Cook, National Accounts Manager, 3M

### A-HA! Performance

A study of the deity of the world's three dominant monotheistic religions: Judaism, Christianity, and Islam. In a dynamic interplay between religion and society's ever-changing beliefs, values, and traditions, human beings' ideas about God have been transformed. Ideas about God have been molded to apply to the spiritual needs of the people who worship him in a particular place and time. The author explores and analyzes the development and progression of the various perceptions of God from the days of Abraham to present times--Adapted from book jacket.

It is the most persistent myth of our time: religion is the cause of all violence. But history suggests otherwise. Karen Armstrong, former Roman Catholic nun and one of our foremost scholars of religion, speaks out to disprove the link between religion and bloodshed. \* Religion is as old as humanity: Fields of Blood goes back to the Stone Age hunter-gatherers and traces religion through the centuries, from medieval crusaders to modern-day jihadists. \* The West today has a warped concept of religion: we regard faith as a personal and private matter, but for most of history faith has informed people's entire outlook on life, and often been inseparable from politics. \* Humans undoubtedly have a natural propensity for aggression: the founders of the largest religions – Jesus, Buddha, the rabbis of early Judaism, the prophet Muhammad – aimed to curb violence and build a more peaceful and just society, but with our growing greed for money and wealth came collective violence and warfare. \* With the arrival of the modern all-powerful, secular state humanity's destructive potential has begun to spiral out of control. Is humanity on the brink of destroying itself? Fields of Blood is a celebration of the ancient religious ideas and movements that have promoted peace and reconciliation across millennia of civilization.

### Information Quality Management

Humor permeates every aspect of society and has done so for thousands of years. People experience it daily through television, newspapers, literature, and contact with others. Rarely do social researchers analyze humor or try to determine what makes it such a dominating force in our lives. The types of jokes a person enjoys contribute significantly to the definition of that person as well as to the character of a given society. Arthur Asa Berger explores these and other related topics in An Anatomy of Humor. He shows how humor can range from the simple pun to complex plots in Elizabethan plays. Berger examines a number of topics ethnicity, race, gender, politics each with its own comic dimension. Laughter is beneficial to both our physical and mental health, according to Berger. He discerns a multiplicity of ironies that are intrinsic to the analysis of humor. He discovers as much complexity and ambiguity in a cartoon, such as Mickey Mouse, as he finds in an important piece of literature, such as

Huckleberry Finn. An Anatomy of Humor is an intriguing and enjoyable read for people interested in humor and the impact of popular and mass culture on society. It will also be of interest to professionals in communication and psychologists concerned with the creative process.

This volume has been divided into two parts: Geometry and Applications. The geometry portion of the book relates primarily to geometric flows, laminations, integral formulae, geometry of vector fields on Lie groups and osculation; the articles in the applications portion concern some particular problems of the theory of dynamical systems, including mathematical problems of liquid flows and a study of cycles for non-dynamical systems. This Work is based on the second international workshop entitled "Geometry and Symbolic Computations," held on May 15-18, 2013 at the University of Haifa and is dedicated to modeling (using symbolic calculations) in differential geometry and its applications in fields such as computer science, tomography and mechanics. It is intended to create a forum for students and researchers in pure and applied geometry to promote discussion of modern state-of-the-art in geometric modeling using symbolic programs such as Maple™ and Mathematica®, as well as presentation of new results.

#### An Anatomy of Humor

One-day, one-problem is a unique adaptation of problem-based learning (PBL) pioneered at Republic Polytechnic, Singapore. Here students are challenged each day with a problem from their domain and attain the necessary learning outcomes in the process of responding to the problem. Throughout the day students would engage in small group discussions, self-directed learning and conversations with their teacher who plays the role of a facilitator. This approach to learning and instruction represents a new brand of constructivist learning in a more structured learning environment compared to conventional PBL. This book contains a series of chapters by authors with first-hand experience in the One-day,one-problem PBL approach. Unlike other books on PBL, the chapters are both research-informed and practical. Results of empirical studies into the factors of PBL such as quality of problems, tutor behaviours, scaffoldings, student learning and interest are discussed together with practical implications for the educator. The book begins with an overview of the one-day, one-problem process, providing a viewpoint from both the student and tutor. Republic Polytechnic's pedagogical philosophy and epistemological belief of education are introduced with the intent to share how the polytechnic designed and implemented a system that supports the philosophical beliefs. Results and practical implications of empirical studies on the various factors that influence students' learning in PBL are discussed. These include the quality of problems and the use of scaffoldings for students' learning, tutors as facilitators, preparation of staff for PBL, student assessment, how students learn in the process of PBL and student interest.

A central aspect of teachers' professional knowledge and competence is the ability to assess students' achievements adequately. Giving grades and marks is one prototypical task in this context. Besides giving grades, assessments for school placements or tracking decisions belong to these tasks. Relevant students' characteristics which influence teachers' assessments do not only involve academic achievement but also students' responses to different task demands as well as non-academic characteristics such as learning motivation or school anxiety. Closely associated with the investigation of teachers' assessment competences and, more specifically, the investigation of conditions associated with high quality of assessments is the development and evaluation of teacher training programs to improve professional competences. In recent years, there has been considerable progress in the domain of professional teacher training; however, only a very limited number of studies are dedicated to the question to what extent training programs might offer valuable approaches to improve the quality of

assessments and to implement high assessment competences. Another important field which is closely related to teachers' competences concerns the question how teachers' professional development is linked to students' learning and learning outcomes. In recent years, the societal demand for evidence that teachers' professional development will result in improved student learning outcomes is increasing. This volume brings together questions on assessment, training, and learning in the professional development of teachers which have not been fully discussed yet. The identification of these research gaps was the reason for dedicating a series of lectures given at the University of Luxembourg 2012 to the topic of professionalization of teachers in these domains. Therefore, this book contains contributions from outstanding international scholars in different academic disciplines to present ideas about open research questions concerning the domains of assessment, training, and learning in the professional development of teachers.

### The Mysterious Marksman

This interdisciplinary volume explores art, its development, and its role in the construction of knowledge. Presenting theory and research on artistic development as a cultural and creative endeavor, contributors examine the origins of human art during the Paleolithic cultural revolution, as part of a modern cultural transformation, in the growth of a creative artist, and in developing children. Target chapters expressing the disciplinary perspectives of psychology, archaeology, communications, education, and the performing arts are followed by commentaries from internationally acclaimed scholars of human development. Part 1 explores how cultures harness and exploit the arts to give expression to values, social practices, and traditions. This section traces the emergence of new art forms that arose during social unrest, including the symbolization of spiritual beliefs expressed on the walls of Paleolithic caves, and the racial identity and cultural values expressed in the media of the hip-hop generation. Part 2 examines the journeys of a composer and a group of students to highlight the process of becoming an artist and the role education plays in its development. The book concludes with a focus on the development of aesthetic appreciation and artistic activity in childhood and adolescence, including, for

example, how a child's developing theory of mind affects appreciation for the arts, and how developing empathy and emotional regulation contribute to the cognitive and affective underpinnings of acting in adolescence. As a whole contributors explore the developmental, sociocultural, and evolutionary processes that make the creation and experience of art possible. Intended for researchers and advanced students in both human development and the arts, this book will also serve as a textbook for advanced courses on psychology and the arts and/or special topics courses in cognitive and/or human development.
