Designed as a textbook for undergraduate students in various engineering disciplines—Mechanical, Civil, Industrial Engineering, Electronics Engineer-ing and Computer Science—and for postgraduate students in Industrial Engineering and Water Resource Management, this comprehensive and well-organized book, now in its Second Edition, shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student friendly. What's New to This Edition

- Discusses different types of costs such as average cost, recurring cost, and life cycle cost.
- Deals with different types of cost estimating models, index numbers and capital allowance.
- Covers the basics of nondeterministic decision making.
- Describes the meaning of cash flows with probability distributions and decision making, and selection of alternatives using simulation.
- Discusses the basic concepts of Accounting.

This book, which is profusely illustrated with worked-out examples and a number of diagrams and tables, should prove extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.

Basic Algebra and Advanced Algebra systematically develop concepts and tools in algebra that are vital to every mathematician, whether pure or applied, aspiring or established. Advanced Algebra includes chapters on modern algebra which treat various topics in commutative and noncommutative algebra and provide introductions to the theory of associative algebras, homological algebras, algebraic number theory, and algebraic geometry. Many examples and hundreds of problems are included, along with hints or complete solutions for most of the problems. Together the two books give the reader a global view of algebra and its role in mathematics as a whole.

Dynamic assessment embeds interaction within the framework of a test-intervene-retest approach to psychoeducational assessment. This book offers an introduction to diagnostic assessors in psychology, education, and speech/language pathology to the basic ideas, principles, and practices of dynamic assessment. Most importantly, the book presents an array of specific procedures developed and used by the authors that can be applied to clients of all ages in both clinical and educational settings. The authors discuss their approach to report-writing, with a number of examples to demonstrate how they incorporate dynamic assessment into a comprehensive approach to assessment. The text concludes with a discussion of issues and questions that need to be considered and addressed. Two appendixes include descriptions of additional tests used by the authors that are adapted for dynamic assessment, as well as information about dynamic assessment procedures developed by others and sources for additional information about this approach.

Learning Language Through Literature

This useful sourcebook contains 12 chapters written by experienced classroom practitioners in Hong Kong. One theme appears constantly in these chapters: that in the English language classroom, whether at primary, secondary, or tertiary levels, high interest and positive motivation occur through active learning when literary texts, literary techniques and literariness are featured. In this book, full coverage is given to the use of poetry, prose and drama in language learning and teaching at all three levels of the education system. The tasks and activities described here have been shown to work with all bands of students. This book is ideally suited both for practising teachers and participants in teacher education programmes in Hong Kong and the rest of S.E. Asia. It will be particularly useful for primary and secondary teachers of English wishing to incorporate appropriate and relevant teaching activities so as to meet the goals of the new Target Oriented English Language Curriculum.

The inspiration for the NBC TV series "Rise," starring Josh Radnor, Auli'i Cravalho, and Rosie Perez — the incredible and true story of an extraordinary drama teacher who has changed the lives of thousands of students and inspired a town. By the author of *The Last Temptation of Rick Pitino*. Why would the multimillionaire producer of *Cats*, *The Phantom of the Opera*, and *Miss Saigon* take his limo from Manhattan to the struggling former steel town of Levittown, Pennsylvania, to see a high school production of *Les Misérables*? To see the show performed by the astoundingly successful theater company at Harry S Truman High School, run by its legendary director, Lou Volpe. Broadway turns to Truman High when trying out controversial shows such as *Rent* and *Spring Awakening* before they move on to high school theater programs across the nation. Volpe's students from this blue-collar town go on to become Emmy-winning producers, entertainment executives, newscasters, and community-theater founders. Michael Sokolove, a Levittown native and former student of Volpe's, chronicles the drama director's last school years and follows a group of student actors as they work through riveting dramas both on and off the stage. This is a story of an economically depressed but proud town finding hope in a gifted teacher and the magic of theater.

Role-Playing Methods in the Classroom

A notable contribution to our understanding of ourselves. This book explores the realm of human behavior in social situations and the way that we appear to others. Dr. Goffman uses the metaphor of theatrical performance as a framework. Each person in everyday social intercourse presents himself and his activity to others, attempts to guide and control the impressions they form of him, and employs certain techniques in order to sustain his performance, just as an actor presents a character to an

audience. The discussions of these social techniques offered here are based upon detailed research and observation of social customs in many regions.

Science Scope

This book pertains to several aspects of drama such as understanding, inspiration, activities, poetry, plays, stories, etc.

Classroom Based Assessment

This book includes strategies for integrating drama in the classroom through the use of creating characters, giving meaning to activities through answering the questions: who, what, when, where, and why about any person and situation under discussion (5 W's), using storyboards, incorporating music, writing radio scripts, and using literature and movies as prompts for improvised enactments. Students will learn how to create characters and apply those creations to different content-area activities, situations, and subject matter. This useful resource describes more than thirty-five scenarios of teachers and students in early elementary grades through graduate school working together to craft drama events that draw out participants' creative energies, interpretations of curricular topics, and investigations of social, political, and personal concerns. In all of these lesson plans, students collectively explore topics, concepts, themes, or tensions that surface as they navigate their way through the conditions and experiences that unfold in a scene, skit, improvisation, or in interrelated episodes. Drama techniques include role play, scripting, dialogue, audience participation, improvisation, and the strategic use of interaction, space, movement, and gesture.

300 million powerpoint presentations are given daily, yet there is a disconnect between the amazing technology of powerpoint and a mediocre student learning experience. To unleash the full potential of powerpoint presentations, we must do a better job of creating presentations that fit the educational needs of students. Slides for Students does just that. Slides for Students is an open and honest discussion about powerpoint in the classroom. A need exists for thoughtfully designed and implemented classroom instruction that focuses on the learner rather than on the technology. This book was written to translate academic research findings into practical suggestions about powerpoint that educators can use. Divided into two parts, Slides for Students discusses the history of powerpoint, explores academic studies on the topic, and demonstrates how to design slides to best suit educational needs and engage with students to avoid the dreaded "death by powerpoint."

Creative Drama in the Classroom and Beyond

The 'Theatre of the Absurd' has become a familiar term to describe a group of radical European playwrights – writers such as Samuel Beckett, Eugène Ionesco, Jean Genet and Harold Pinter – whose dark, funny and humane dramas wrestled profoundly with the meaningless absurdity of the human condition. It is a testament to the power and insight of Martin Esslin's landmark work, originally published in 1961, that its title should enter the English language in the way that it has. Now available in the Bloomsbury Revelations series with a new preface by Marvin Carlson, *The Theatre of the Absurd* remains to this day a clear-eyed work of criticism on a compelling period of European writing.

Teaching Drama in the Classroom

The Philosopher's Index

What is understanding and how does it differ from knowledge? How can we determine the big ideas worth understanding? Why is understanding an important teaching goal, and how do we know when students have attained it? How can we create a rigorous and engaging curriculum that focuses on understanding and leads to improved student performance in today's high-stakes, standards-based environment? Authors Grant Wiggins and Jay McTighe answer these and many other questions in this second edition of *Understanding by Design*. Drawing on feedback from thousands of educators around the world who have used the UbD framework since its introduction in 1998, the authors have greatly revised and expanded their original work to guide educators across the K-16 spectrum in the design of curriculum, assessment, and instruction. With an improved UbD Template at its core, the book explains the rationale of backward design and explores in greater depth the meaning of such key ideas as essential questions and transfer tasks. Readers will learn why the familiar coverage- and activity-based approaches to curriculum design fall short, and how a focus on the six facets of understanding can enrich student learning. With an expanded array of practical strategies, tools, and examples from all subject areas, the book demonstrates how the research-based principles of *Understanding by Design* apply to district frameworks as well as to individual units of curriculum. Combining provocative ideas, thoughtful analysis, and tested approaches, this new edition of *Understanding by Design* offers teacher-designers a clear path to the creation of curriculum that ensures better learning and a more stimulating experience for students and teachers alike.

Resources in Education

The National Science Education Standards address not only what students should learn about science but also how their learning should be assessed. How do we know what they know? This accompanying volume to the Standards focuses on a key kind of assessment: the evaluation that occurs regularly in the classroom, by the teacher and his or her students as interacting participants. As students conduct experiments, for example, the teacher circulates around the room and asks individuals about their findings, using the feedback to adjust lessons plans and take other actions to boost learning. Focusing on the teacher as the primary player in assessment, the book offers assessment guidelines and explores how they can be adapted to the individual classroom. It features examples, definitions, illustrative vignettes, and practical suggestions to help teachers obtain the greatest benefit from this daily evaluation and tailoring process. The volume discusses how classroom assessment differs from conventional testing and grading-and how it fits into the larger, comprehensive assessment system.

Democracy and Education

Drama-Based Pedagogy examines the mutually beneficial relationship between drama and education, championing the versatility of drama-based teaching and learning designed in conjunction with the classroom curriculum. National Art Education Association Golden Anniversary Convention, 1947-1997

The design of school curriculums involves deep thought about the nature of knowledge and its value to learners and society. It is a serious responsibility that raises a number of questions. What is knowledge for? What knowledge is important for children to learn? How do we decide what knowledge matters in each school subject? And how far should the knowledge we teach in school be related to academic disciplinary knowledge? These and many other questions are taken up in *What Should Schools Teach?* The blurring of distinctions between pedagogy and curriculum, and between experience and knowledge, has served up a confusing message for teachers about the part that each plays in the education of children. Schools teach through subjects, but there is little consensus about what constitutes a subject and what they are for. This book aims to dispel confusion through a robust rationale for what schools should teach that offers key understanding to teachers of the relationship between knowledge (what to teach) and their own pedagogy (how to teach), and how both need to be informed by values of intellectual freedom and autonomy. This second edition includes new chapters on Chemistry, Drama, Music and Religious Education, and an updated chapter on Biology. A revised introduction reflects on emerging discourse around decolonizing the curriculum, and on the relationship between the knowledge that children encounter at school and in their homes.

Beatrice thinks she has no acting talent but that doesn't stop her from auditioning for the annual middle school play. She has two missions-winning the role of Pocahontas (which guarantees her popularity with the cool kids, at least in her mind) and grabbing the attention of her estranged father. Easy! Except Michiko, a new girl from Japan, shows up and ruins everything! So begins Beatrice's diabolical and hilarious plan to scare away Michiko. But Michiko has goals of her own with no plans to leave soon. Beatrice is sometimes sarcastic, sometimes very funny and always honest. A great book for those who love theater and every part of it--the good, the bad and the crazy.

Morality and the Human Goods

A concise and accessible introduction to natural law ethics, this book introduces readers to the mainstream tradition of Western moral philosophy. Building on philosophers from Plato through Aquinas to John Finnis, Alfonso Gómez-Lobo links morality to the protection of basic human goods — life, family, friendship, work and play, the experience of beauty, knowledge, and integrity — elements essential to a flourishing, happy human life. Gómez-Lobo begins with a discussion of Plato's *Crito* as an introduction to the practice of moral philosophy, showing that it requires that its participants treat each other as equals and offer rational arguments to persuade each other. He then puts forth a general principle for practical rationality: one should pursue what is good and avoid what is bad. The human goods form the basis for moral norms that provide a standard by which actions can be evaluated: do they support or harm the human goods? He argues that moral norms should be understood as a system of rules whose rationale is the protection and enhancement of human goods. A moral norm that does not enjoin the preservation or enhancement of a specific good is unjustifiable. Shifting to a case study approach, Gómez-Lobo applies these principles to a discussion of abortion and euthanasia. The book ends with a brief treatment of rival positions, including utilitarianism and libertarianism, and of conscience as our ultimate moral guide. Written as an introductory text for students of ethics and natural law, *Morality and the Human Goods* makes arguments consistent with Catholic teaching but is not based on theological considerations. The work falls squarely within the field of philosophical ethics and will be of interest to readers of any background.

Training just got easier You have probably been on both good and bad training courses. Unfortunately, it may be the bad ones that you remember - perhaps the content was badly ordered, the arrangements were poor, the speaker was boring. How can you prepare for and lead an outstanding training course? In this book we will show you how. Sunday: What is training? What are you aiming to achieve? What are the basic different styles in which colleagues learn - and in which trainers train? What overall points should you consider and what practical arrangements do you need to think about, for example on timing and venue? Monday: Identify the training needs clearly How to analyse participants' training needs, using various sources; use the needs to define clear learning outcomes that are both SMART and also relevant to participants' real work and jobs. Tuesday: Design the course carefully How to continue to prepare well: think about the points you want to communicate and order them clearly; find a fresh angle; be motivational, inspirational and practical; write a strong beginning and round off your training well at the end. Wednesday: Plan variety creatively Why the need to change the style of training regularly throughout the session is important to maintain participants' interest and involvement; plan variety; consider different ways to encourage group participation; use visual aids and PowerPoints effectively. Thursday: Implement your plan successfully Go for it! Put all your preparation into practice on the day itself. How will you make a good first impression and make the most of informal times? Body language is important; how will you overcome nerves? Learn how to deal with difficult people. Friday: Evaluate the training thoroughly Why identifying what went well and what didn't go so well is important; checking on 'learning' after the course is essential to determine changed attitudes, behaviour patterns, and so on. Review your training to see if it had its desired effects: if not, reassess and begin the process again. Saturday: Refine your skills constantly You have completed your training course and evaluated it; now learn how to cultivate the qualities of a professional trainer, for example by keeping up to date with your subject, learning from your mistakes and mentoring a colleague to lead training courses.

Services to older people with mental health problems have gone through radical change in recent years. Legislation has had a profound effect by dictating how care to older people is delivered both within hospital and within the community. The recent government agenda emphasizes cost effectiveness, value for money and accountability. This, too, is an important driving force in re-evaluating the service, although not everyone would agree with many of the proposed strategies and there are clearly different views as to the appropriateness of many of the services. One thing is certain, however - the move towards interdisciplinary working is here to stay. Not all change has been led by legislation, and many innovations have been founded in the day-to-day practices in the care of older people with mental health problems. A service, of course, does not become integrated merely by imposing joint working on a number of professionally based disciplines, and in many ways this may not be desirable. At its worst it produces duplication, where people from different backgrounds are all doing the same job. This is not the intention of joint-working, instead it should attempt to improve the quality of service by a rich mix of skills and experience from a number of related disciplines.

Personality Capture and Emulation is the gateway to an amazing future that actually may be achieved, enabling the preservation and simulation of human personalities at progressively higher levels of fidelity. This challenge is no longer the province merely of uninhibited visionaries, but has become a solid field of research, drawing upon a wide range of information technologies in human-centered

computing and cyber-human systems. Even at modest levels of accomplishment, research in this emerging area requires convergence of cognitive, social, and cultural sciences, in cooperation with information engineering and artificial intelligence, thus stimulating new multidisciplinary perspectives. Therefore this book will inspire many specific research and development projects that will produce their own valuable outcomes, even as the totality of the work moves us closer to a major revolution in human life. Will it ever really be possible to transfer a human personality at death to a technology that permits continued life? Or will people come to see themselves as elements in a larger socio-cultural system, for which a societal information system can provide collective immortality even after the demise of individuals? A large number and variety of pilot studies and programming projects are offered as prototypes for research that innovators in many fields may exploit for the achievement of their own goals. Together, they provide an empirical basis to strengthen the intellectual quality of several current debates at the frontiers of the human and information sciences.
