Newton's Law of Universal Gravitation

Energy and thermodynamics

Energy is not a vector
20 mph (32 km/h) faster almost doubles the energy of a car
Total energy is kinetic plus potential
Gasoline has chemical potential energy
Thermodynamic Systems Thermal Energy
Kinetic energy of car converted to thermal energy from friction of the brakes
Entropy is a measure of "disorder," or the information required to describe microstates
2nd law of thermodynamics: Entropy of an isolated system can never decrease
Gasoline more useful for work than heat from exhaust
Exhaust will not rearrange itself to become gasoline
but gasoline can be converted to heat and exhaust
One way flow of entropy appears to be the only reason there is a forward flow of time
Electromagnetism: Study of interaction between electrically charged particles
Moving charges create magnetic fields
Moving magnetic field affects charges
Magnets always have two poles
Faraday's law
Moving magnetic field creates an electrical field
Laws of physics on moving train is same as laws of physics standing still
Energy is not continuous, but is quantized
Heisenberg's Uncertainty Principle uncertainty in momentum
Note: central cluster of electrons exaggerated for illustration. Only a probability cloud exists
Model of hydrogen atom with electron at lowest energy state
A quantum system can be elementary particles
