How Stephen Hawking flip-flopped on whether the Universe has a beginning

I followed my nose and did whatever looked interesting and possible at the time. There has been a beat change in the status of general relativity and cosmology in the last thirty years. Hawking's black hole theorem observationally confirmed

This book contains a personal selection of his most significant papers on gravitational theory applied to cosmology and black holes. His early work, partly in collaboration with Roger Penrose, showed that spacetime must come to an end at singularities that will occur both in the big bang and in black holes.
