[#bone metabolism disorders](#) [#mineral imbalance conditions](#) [#osteoporosis](#) [#calcium phosphorus regulation](#) [#parathyroid disorders](#)

Disorders of bone and mineral metabolism encompass a range of conditions affecting the skeletal system and the body's intricate regulation of essential minerals like calcium and phosphorus. These metabolic bone diseases can lead to issues such as osteoporosis, osteomalacia, or conditions stemming from parathyroid dysfunction, significantly impacting bone density, strength, and overall health requiring careful diagnosis and management.
