Removing the diver's mask and regulator, opening airway & checking for breathing.

While continuing effective rescue breathing, demonstrate equipment removal (victim & rescuer) while towing the diver toward an exit

With your regulator or snorkel in turn the diver face up

Establish buoyancy by removing weights & inflating the BCD!

Call for help at some point between approach & breathing check!

Check for breathing for up to 10 seconds!

Shake excess water from the hand to prevent it from entering the victims airway!

Give two initial rescue breaths then one every 5 seconds after!

Pocket Mask provides a barrier & is very effective in choppy conditions!

Take from your pocket either on approach or after breathing check!

Apply even pressure with fingers & thumb ensuring a good seal!

Make sure the cap stays in place on the continuous flow connection throughout the rescue

Always give priority to giving effective breaths not equipment removal!

Swim slowly towards your exit point while removing equipment & continuing rescue breathing!
