Commentary on the 1961 Edition of Light Gage Cold-formed Steel Design Manual

The aim of this book is to review recent research and technical advances, including the progress in design codes, related to the engineering applications of light gauge metal sections made in carbon, high strength and stainless steel, as well as aluminium alloys. Included is a review of the new technologies for connections of light gauge metal members. Main advanced applications, for residential, non residential and industrial buildings and pallet rack systems are also covered. For the first time, this book takes into account all the metallic materials now used more and more for structural components. The book will be of great interest not only for researchers but also for design engineers faced to the use of new metallic materials in modern structural applications.

The ARRL Ham Radio License Manual

ABOUT NUMBER STATIONS There are actually several types of number stations, but the prototypical one is simply someone on the air reading lists of numbers (or sending them via Morse code). Some read off other coded messages (like phonetic alphabet letters) or have sounds in the background that may or may not be digitally-encoded messages. One even used a sound clip from a Yosemite Sam cartoon to separate bursts of data! According to the Conet Project, number stations were heard as early as World War I. In most cases, no one knows for sure what the purpose of the stations are, but there are dedicated groups that try to locate them and even decode what they are saying. However, it is thought that most of them use some form of one time pad cryptography which makes trying to decode them a very long shot. It is pretty widely accepted, though, that the purpose of most (if not all) of these stations is to deliver clandestine messages. For example, suppose I wanted to send you secret messages so I give you a shortwave receiver. I tell you to listen to a certain frequency at a certain time and I read off a series of numbers. To decode my message, you treat the numbers I read as a page number followed by a word number in, for example, a newspaper that is a day or two old. As long as you keep a copy of the newspaper and you have the radio, I can send you messages that would be very hard to decipher unless someone told you what newspaper we agreed to use. This is a form of one time pad, and if you keep the secrets, the method is practically unbreakable. The key, though, is that when they search your hotel room and find a shortwave receiver and a few days of newspapers, that's not particularly suspicious. There's a group called ENIGMA 2000 that catalogs and analyzes number stations, producing the Enigma Control List (although the latest one is a few years old). They have a naming scheme that identifies stations based on language or other characteristics of the signal. For example, stations starting with E broadcast in English, while stations starting with S broadcast in a Slavic language. M stations use Morse code. Naturally, these are just handy designations (like E22). In most cases, we don't know what the stations call themselves. In 1998, the FBI arrested five Cuban intelligence officers. The spies received messages via a numbers station (using Sony shortwave radios) and the coded messages were a big part of the FBI's court case. The FBI acquired the software the spies used to decode the messages and were able to read them (and present them in court). This may be the only time that a government has admitted that these stations are tied to covert operations. The Cuban Five, also known as the Miami Five (Gerardo Hernández, Antonio Guerrero, Ramón Labañino, Fernando González, and René González) were tried and convicted of conspiracy to commit espionage, conspiracy to commit murder, acting as an agent of a foreign government, and other charges. **WHY NOW?** Numbers Station.. You have to wonder, in this day of Internet and satellite phones, why these stations still operate. After all, a shortwave receiver is a bit more unusual today than it used to be. Maybe the receivers are camouflaged as standard radios and need some James Bond-style gadget to put them on the shortwave band. After all, a satellite phone implies you are talking to someone and Internet usage is traceable. Short of being caught in the act (or using software like the Cubans), there's no proof of what you are listening to on a radio. Still, it seems incredible that there are apparently still operatives somewhere right now copying encoded instructions from these number stations. You can only wonder what they are up to. **HOW CAN I HEAR THEM?** If you have a software defined radio setup, that's perfect. Of course, a general coverage receiver or a ham radio that has a wide receive range will do the trick too. An easy way to find common stations!

We're facing an information overload. With the quick tap of a finger we can access an endless stream of addictive information—sports scores, breaking news, political opinions, streaming TV, the latest Instagram posts, and much more. Accessing information has never been easier—but acquiring wisdom is increasingly difficult. In an effort to help us consume a more balanced, healthy diet of information, Brett McCracken has created the “Wisdom Pyramid.” Inspired by the food pyramid model, the Wisdom Pyramid challenges us to increase our intake of enduring, trustworthy sources (like the Bible) while moderating our consumption of less reliable sources (like the Internet and social media). At a time when so much of our daily media diet is toxic and making us spiritually sick, *The Wisdom Pyramid* suggests that we become healthy and wise when we reorient our lives around God—the foundation of truth and the eternal source of wisdom.

Does your church make you uncomfortable? It's easy to dream about the "perfect" church—a church that sings just the right songs set to just the right music before the pastor preaches just the right sermon to a room filled with just the right mix of people who happen to agree with you on just about everything. Chances are your church doesn't quite look like that. But what if instead of searching for a church that makes us comfortable, we learned to love our church, even when it's challenging? What if some of the discomfort that we often experience is actually good for us? This book is a call to embrace the uncomfortable aspects of Christian community, whether that means believing difficult truths, pursuing difficult holiness, or loving difficult people—all for the sake of the gospel, God's glory, and our joy.

This is an incredible history of Brighton, earlier known as Brighthelmstone, a seaside resort and one of the two main areas of the City of Brighton and Hove. The writer entertains the readers with vivid descriptions of the site and several unknown facts. A'Beckett and Leech were original contributors to "Punch, or the London Charivari" magazine, established 1841. It became the famous "Punch" magazine and remained in publication to 2002. A'Beckett also wrote editorials for a similar concept magazine, "Figaro in London" that ceased publication in 1839. "In commencing this work, the object of the Author was, as he stated in the Prospectus, to blend amusement with instruction, by serving up, in as palatable a shape as he could, the facts of English History. He pledged himself not to sacrifice the substance to the seasoning; and though he has certainly been a little free in the use of his sauce, he hopes that he has not produced a mere hash on the present occasion. His object has been to furnish something which may be allowed to take its place as a standing at the library table, and which, though light, may not be found devoid of nutriment."--Preface.

Clarks'Guide to the Sights of London: Comprising a Glance at All the Great Public Edifices, Parks, Gardens, Etc

Culture is in right now for Christians. Engaging it, embracing it, consuming it, and creating it. Many (younger) evangelicals today are actively cultivating an appreciation for aspects of culture previously stigmatized within the church. Things like alcohol, Hollywood's edgier content, plays, art openings, and concerts have moved from being forbidden to being celebrated by believers. But are evangelicals opening their arms too wide in uncritical embrace of culture? How do they engage with culture in ways that are mature, discerning, and edifying rather than reckless, excessive, and harmful? Can there be a healthy, balanced approach--or is that simply wishful thinking? With the same insight and acuity found in his popular Hipster Christianity, Brett McCracken examines some of the hot-button gray areas of Christian cultural consumption, helping to lead Christians to adopt a more thoughtful approach to consuming culture in the complicated middle ground between legalism and license. Readers will learn how to both enrich their own lives and honor God--refining their ability to discern truth, goodness, beauty, and enjoy his creation.

History of Brighthelmston; or, Brighton as I View it and Others Knew It

Bruce Redford re-creates the vibrant culture of connoisseurship in Enlightenment England by investigating the multifaceted activities and achievements of the Society of Dilettanti. Elegantly and wittily he dissects the British connoisseurs whose expeditions, collections, and publications laid the groundwork for the Neoclassical revival and for the scholarly study of Graeco-Roman antiquity. After the foundation of the society in 1732, the Dilettanti commissioned portraits of the members. Including a striking group of mock-classical and mock-religious representations, these portraits were painted by George Knapton, Sir Joshua Reynolds, and Sir Thomas Lawrence. During the second half of the century, the society's expeditions to the Levant yielded a series of pioneering architectural folios, beginning with the first volume *The Antiquities of Athens* in 1762. These monumental volumes aspired to empirical exactitude in text and image alike. They prepared the way for *Specimens of Antient Sculpture* (1809), which combines the didactic (detailed investigations into technique, condition, restoration, and provenance) with the connoisseurial (plates that bring the illustration of ancient sculpture to new artistic heights). The Society of Dilettanti's projects and publications exemplify the Enlightenment ideal of the gentleman amateur, which is linked in turn to a culture of wide-ranging curiosity.
