One-day, one-problem is a unique adaptation of problem-based learning (PBL) pioneered at Republic Polytechnic, Singapore. Here students are challenged each day with a problem from their domain and attain the necessary learning outcomes in the process of responding to the problem. Throughout the day students would engage in small group discussions, self-directed learning and conversations with their teacher who plays the role of a facilitator. This approach to learning and instruction represents a new brand of constructivist learning in a more structured learning environment compared to conventional PBL. This book contains a series of chapters by authors with first-hand experience in the One-day,one-problem PBL approach. Unlike other books on PBL, the chapters are both research-informed and practical. Results of empirical studies into the factors of PBL such as quality of problems, tutor behaviours, scaffoldings, student learning and interest are discussed together with practical implications for the educator. The book begins with an overview of the one-day, one-problem process, providing a viewpoint from both the student and tutor. Republic Polytechnic's pedagogical philosophy and epistemological belief of education are introduced with the intent to share how the polytechnic designed and implemented a system that supports the philosophical beliefs. Results and

practical implications of empirical studies on the various factors that influence students' learning in PBL are discussed. These include the quality of problems and the use of scaffoldings for students' learning, tutors as facilitators, preparation of staff for PBL, student assessment, how students learn in the process of PBL and student interest.

Teachers, as life-long learners, engage in professional development to deepen their understanding of content and instructional methods. Teacher professional development is a form of adult education, and adults learn best if they are actively involved in their own learning and see it relative to their own needs. Grounding professional development in actual classroom practice is a highly powerful means of fostering effective teachers. Research has shown that, for professional development to be effective, several components of instruction should be considered: reflection on practice, problems

arising in practice, subject matter content, and principles of adult learning. Practice-Based Professional Development in Education is a cutting-edge research publication that explores both effective and ineffective professional development practices and presents arguments for why adult learning theory should be considered when designing a professional development session. Highlighting a range of topics including social media, education reform, and teacher learning, this book is essential for teachers, academicians, education professionals, policymakers, curriculum designers, researchers, and students.

### Transforming Nursing Education Through Problem-based Learning

PREFACE. THE Author of this very practical treatise on Scotch Loch - Fishing desires clearly that it may be of use to all who had it. He does not pretend to have written anything new, but to have attempted to put what he has to say in as readable a form as possible. Everything in the way of the history and habits of fish has been studiously avoided, and technicalities have been used as sparingly as possible. The writing of this book has afforded him pleasure in his leisure moments, and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general. This section is interleaved with blank sheets for the readers notes. The Author need hardly say that any suggestions addressed to the case of the publishers, will meet with consideration in a future edition. We do not pretend to write or enlarge upon a new subject. Much has been said and written-and well said and written too on the art of fishing but loch-fishing has been rather looked upon as a second-rate performance, and to dispel this idea is one of the objects for which this present treatise has been written. Far be it from us to say anything against fishing, lawfully practised in any form but many pent up in our large towns will bear us out when we say that, on the whole, a days loch-fishing is the most convenient. One great matter is, that the loch-fisher is dependent on nothing but enough wind to curl the water, -and on a large loch it is very seldom that a dead calm prevails all day, -and can make his arrangements for a day, weeks beforehand whereas the stream-fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river, it is quite another matter to arrange for a days river-fishing, if one is looking forward to a holiday at a date some weeks ahead. Providence may favour the expectant angler with a good day, and the water in order but experience has taught most of us that the good days are in the minority, and that, as is the case with our rapid running streams, -such as many of our northern streams are, -the water is either too large or too small, unless, as previously remarked, you live near at hand, and can catch it at its best. A common belief in regard to loch-fishing is, that the tyro and the experienced angler have nearly the same chance in fishing, -the one from the stern and the other from the bow of the same boat. Of all the absurd beliefs as to loch-fishing, this is one of the most absurd. Try it. Give the tyro either end of the boat he likes give him a cast of ally flies he may fancy, or even a cast similar to those which a crack may be using and if he catches one for every three the other has, he may consider himself very lucky. Of course there are lochs where the fish are not abundant, and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught, and where each has a fair chance. Again, it is said that the boatman has as much to do with catching trout in a loch as the angler. Well, we dont deny that. In an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream-fishing...

The need for more empathetic and community-focused students must begin with educators, as service-learning has begun to grow in popularity throughout the years. By implementing service and community aspects into the classroom at an early age, educators have a greater chance of influencing students and creating a new generation of service-minded individuals who care about their communities. Teachers must have the necessary skills and current information available to them to provide students with quality service learning and community engagement curricula. The Research Anthology on Service Learning and Community Engagement Teaching Practices provides a thorough investigation of the current trends, best practices, and challenges of teaching practices for service learning and community engagement. Using innovative research, it outlines the struggles, frameworks, and recommendations necessary for educators to engage students and provide them with a comprehensive education in service learning. Covering topics such as lesson planning, teacher education, and cultural humility, it is a crucial reference for educators, administrators, universities, lesson planners, researchers, academicians, and students.
