Kirchhoff's current **law**, or junction rule ... calculate the current flowing through each resistor using kirchoff's rules

using kirchhoff's junction

create a positive voltage contribution to the circuit

using the loop rule

moving across a resistor

solve by elimination

analyze the circuit

calculate the voltage drop across this resistor

start with loop one

redraw the circuit at this point  
calculate the voltage drop of this resistor  
try to predict the direction of the currents  
define a loop going in that direction  
calculate the potential at each of those points  
place the appropriate signs across each resistor  
take the voltage across the four ohm resistor  
calculate the voltage across the six ohm  
calculate the current across the 10 ohm  
calculate the current flowing through every branch of the circuit  
let's redraw the circuit

calculate the potential at every point  
the current do the 4 ohm resistor  
calculate the potential difference or the voltage across the eight ohm  
calculate the potential difference between d and g  
confirm the current flowing through this resistor  
calculate all the currents in a circuit
