EBOOK: Essentials of Pharmacology for Nurses

This ideal starter text for student nurses makes pharmacology less intimidating by focusing on the knowledge needed at pre-registration level in order to practice as a newly qualified nurse. Noted for its clear layout and jargon-free language, this updated edition introduces pharmacology in a friendly, informative way. The book does not assume previous knowledge of pharmacology, or a level of confidence with maths and drugs calculations. This new edition has been carefully expanded to include a new chapter introducing drug calculations and measurements as well as more detail on drugs used in chronic conditions, as well as more on pharmacology for the older patient and for other specific groups such as children, pregnant women or those with minor illness. More case scenarios have been added to encourage nurses to apply knowledge to a range of different people with a range of needs. The book contains: 90 calculations and 100 multiple choice questions to help perfect your skills and assess learning Clinical tip boxes linking pharmacology to the role of the nurse 35 patient scenarios across a range of clinical settings References to key clinical tests and the latest NICE guidelines The book emphasises application of pharmacological principles to all areas of practice including drug action, interaction and side effects, and is useful to all students of pharmacology whether as part of a 3 year course, post-qualifying course, top-up course or standalone module. "This latest edition of a key textbook on pharmacology for nurses has moved forward from previous editions by becoming stronger by the inclusion of a greater scope of material so maintaining its place as an essential pharmacology book for current and forthcoming nursing students in all clinical practice fields to give them a strong evidence base for their studies and clinical practice. The addition of a chapter on drug calculations is an essential step forward in this edition for all students as this is a key component within all current nursing degree programmes. The continued use of case studies and clinical tips makes learning fun both as an individual but also in small learning groups of students. It follows a clear pathway for learning: it is easy to read, is clearly written and shows the importance of aspects of pharmacology within the work of a nurse." Keith Booles, Senior Nurse Lecturer/Module Leader, Faculty of Health Sciences, Staffordshire

University, UK "With the ever evolving role of nursing it is essential, for safe practice, that all nurses have knowledge of pharmacology. This latest edition of essentials of pharmacology for nurses offers just that. This is a well presented book with logical, thought out chapters that enable the reader to learn at their own pace. Although aimed at undergraduate nurses, I feel that this is a good base to build on pharmacology knowledge, not only for undergraduate nurses but also trained nurses." Sharon Riverol NHS West Cheshire CCG, UK

For pharmacology courses in nursing programs Help students think like nurses and understand how pharmacology relates to patient care When drugs are learned in isolation from their associated diseases, students have difficulty connecting pharmacotherapy, pathophysiology, and nursing care. Pharmacology for Nurses: A Pathophysiologic Approach, Fifth Edition, helps students master pharmacology by tightly linking it to therapeutic goals and patient wellness. Organized by body systems and diseases, it places drugs in context with how they are used therapeutically. Students can then easily locate relevant anatomy, physiology, pathology, and pharmacology in the same chapter. Nursing Process Application features clearly relate pharmacology to key nursing processes. Features highlighting complementary therapies, community-oriented and evidence-based practices, and lifespan considerations help students make connections to nursing practice. To give readers a clear picture of the holistic nature of pharmacology, the Fifth Edition reflects current pharmacotherapeutics and advances in understanding disease. Also available with MyNursingLab® MyNursingLab is an online homework, tutorial, and assessment program designed to engage students in the Pharmacology course and improve results. Its guided learning path is proven to help students think like a nurse as they move beyond memorization to true understanding through application. Havard's Nursing Guide to Drugs

"...Focuses on the use of drugs as medications within the healthcare environment in Australia and New Zealand. ... We use the term 'medication', rather than 'drug', throughout this book to refer to any drug that is used in the healthcare context, although the terms are generally interchangeable ... and it is the generic name of a medication that does not change and is the essential name for the nurse to know. ... we also introduce some abbreviations that are commonly used by healthcare providers and pharmacists in writing and preparing medication prescriptions. ...Two new chapters have been included in the second edition. One chapter covers pharmacogenetics and pharmacogenomics, an area of growing interest in personalised medicine, and the other covers legal and ethical issues related to the administration of medications."--from preface.

Registered Nurses must have thorough knowledge of pharmacology, medicines administration, and the effects of medicines. Fundamentals of Pharmacology for Children's Nurses is written for nurses and allied health professionals involved in the care of children and young people (CYP) to focus exclusively on pharmacology. Filling a gap in current literature on the subject, this much-needed resource develops the competence and confidence required to prescribe, dispense, and administer medicines to children and young people. Emphasising the importance of patient-centered care to CYP, the text describes the role of the healthcare provider working with CYP and their families; explains how to use pharmaceutical and prescribing reference guides; discusses legal and ethical issues; examines pharmacodynamics and pharmacokinetics, and more. Helping readers respond appropriately and compassionately to the needs of those receiving care and their families, this textbook: Covers a wide range of medications used in diabetes, cancer, mental health, and other areas Features a wealth of full-colour images and numerous pedagogical tools including learning objectives, self-test questions, and reflective exercises to enable readers to contextualise and assess their knowledge Presents case studies to reinforce learning, and illustrate the application of theory to practice Provides authoritative and practical guidance on formulations, adverse drug reactions, analgesics, antibiotics, immunisations, and the medications most commonly used when providing care to CYP Includes access to a companion website with interactive MCQs, case studies, references, an image bank, and links to further reading and supplemental resources Fundamentals of Pharmacology for Children's Nurses is essential reading for undergraduate children's nursing students, trainee nursing associates, those undertaking healthcare programmes of study, as well as those seeking to better understand pharmacology.

Clinical Pharmacology for Nurses

Pharmacology in Nursing, Australian and New Zealand 3rd Edition focuses on the use of drugs as medications within the healthcare environment in Australia and New Zealand. This text is a resource for nurses and health professionals in their understanding of drugs and their actions, especially with regard to the responsibilities of nurses in relation to medication administration and patient management. The text introduces medications and medication therapies, and the principles and methods of medication administration, with an emphasis on the implications for nursing care. Specific medication therapy considerations for vulnerable groups are presented to highlight the special concerns for these groups. A review of dosage calculations is also included. The text takes a body systems approach, focusing on the pharmacology of the medications that act on the various body systems and their disorders.

Clayton's Basic Pharmacology for Nurses, 19e Text and Study Guide Package

This book is for nurses at all levels who want to improve their understanding of clinical pharmacology - a subject of growing importance to nurses as they begin to assume prescribing responsibilities and to take on an expanded role in the administration of drugs and the monitoring of outcomes of drug treatments. This book contains 247 multiple choice questions and answers; covers practical, everyday problems and explores some of the more theoretical aspects of clinical pharmacology; stimulates student nurses' interest in drugs and facilitates the learning process; and provides a useful method of updating for qualified nurses. Based on the well-known textbook Clinical Pharmacology for Nurses by the same authors, the answers provided in the text contain sufficient detail to allow the book to be used on its own, as a quick revision, or as a self-teaching aid.

Key Features: Accessible and study-friendly Each chapter has learning objectives and activities to support a deeper understanding of the theoretical knowledge base and its application to practice Case studies linking the topics to real-life scenarios Companion website at www.wiley.com/go/nuttall with a range of self-assessment questions, quizzes, numeracy exercises, case studies and weblinks. The

Textbook of Non-Medical Prescribing provides support to anyone studying for a prescribing qualification or looking for a refresher on the subject.

Pharmacology in Nursing

Effectively learning pharmacology requires students to clearly see the connection between pharmacology, disease and patient care. Pharmacology for Nurses, 3e (this is the standalone book) is structured to present pharmacology and pathology together, so students can more easily grasp the interrelationship between these subjects and provide a holistic perspective to patient care. A prototype approach, easy to follow presentation and extensive pedagogical aids enable students to understand key concepts and apply essential components of nursing care to drug therapy. Test Yourself in Clinical Pharmacology for Nurses

With its colorful, user-friendly format, Pharmacology and the Nursing Process, 7th Edition provides students with all the pharmacology information they need - and no more than they need - to administer drugs safely and effectively. Increased emphasis on the nursing process and prioritization focuses on the most essential assessments, nursing diagnoses, interventions, and evaluations. Thoroughly updated drug information is clear and concise, highlighting the most commonly used drugs, and includes a unique focus on safety-oriented QSEN competencies. Hundreds of full-color illustrations show how drugs work in the body and depict key steps in drug administration. Written by expert pharmacology educators and clinicians, this bestselling textbook employs innovative, practical learning aids to help your students prepare for success on the NCLEX® Examination and in nursing practice. Focus on need-to-know information provides the most essential drug information for safe, effective clinical practice. Focus on the nursing process and prioritization helps you apply the nursing process to all aspects of drug therapy, from assessment to nursing diagnoses, interventions, and evaluation/outcome criteria. UNIQUE! Illustrated Study Skills Tips include practical advice on time management, note taking, study techniques, and test-taking strategies. Special boxes and tables highlight evidence-based practice, dosages, pharmacokinetics, laboratory values related to drug therapy, preventing medication errors, cultural implications, lifespan considerations, herbal therapies, and legal and ethical principles. Nearly 300 full-color illustrations and the Photo Atlas of Drug Administration show how drugs work in the body and depict key steps in drug administration by various routes. NCLEX® Examination-style review questions are included in every chapter, with at least one alternate-format item per chapter and more than 40 new dosage calculation questions. Drug profiles highlight the pharmacokinetics and unique variations of commonly used drugs. Case studies promote clinical reasoning skills related to nursing pharmacology. Patient Teaching Tips include key points to convey to patients, their families, and their caregivers. Focus on need-to-know content uses a streamlined approach to drug indications and emphasizes only the most common or serious adverse effects rather than all reported adverse effects, listing them in order of those most commonly seen. Focus on prioritization includes prioritized nursing diagnoses along with corresponding prioritization of goals and outcomes, helping you connect nursing diagnoses to goals and outcomes. UNIQUE! QSEN focus highlights those aspects of the book that correlate with the QSEN competencies for patient safety and quality nursing care. Clear, direct-address writing style promotes learning of pharmacology content. NEW drugs and NEW treatment guidelines help you ensure that your clinical practice is consistent with the latest evidence-based guidelines, including the latest FDA drug approvals, drug withdrawals, therapeutic uses, and warnings/precautions. NEW and UPDATED illustrations clarify drug administration and pharmacological processes for easier understanding. Student resources on an Evolve companion website include new Unfolding Case Studies and additional opportunities for active learning.

Fundamentals of Pharmacology

This title is directed primarily towards health care professionals outside of the United States. An understanding of medicines and their effects on patients remains a crucial area of nursing knowledge. This book provides a thorough foundation upon which nurses can build their clinical experience to achieve competence. It not only provides information on the actions of drugs on the body but also gives

clear guidance on the practical aspects of medicines management in both hospital and community. Organisation of the text broadly follows the British National Formulary for ease of use. Management of medicines linked to their therapeutic use Medicine administration linked with relevant care of patients where possible Basic principles of clinical pharmacology underpin the therapeutic chapters A chapter on the role of patients and carers is included All content revised in the light of changes in drug therapy, clinical practice and medicines management including nurse prescribing Key objectives for each chapter Self-assessment exercises with answers More detail relating to palliative care; nurse prescribing A new section on Intensive Therapy Totally redesigned in two colours with improved design and page layout, and better illustrations

The Textbook of Non-Medical Prescribing

This new edition of the popular Pharmacology case studies for nurse prescribers has been thoroughly revised in the light of the latest research and guidance from NICE, the British National Formulary (BNF), the Royal Pharmaceutical Society, the Nursing and Midwifery Council and the Royal College of Nursing. While the first edition was aimed at students undertaking the non-medical prescribing modules, this updated text has broadened its scope and is relevant to all trainee and qualified nurse prescribers. There are new and additional chapters on pregnancy and breastfeeding, sexual health and contraception, and prescribing for frailty syndrome in the elderly. The latest developments in pharmacology (such as the emergence of biosimilar drugs) are included in the text; and all the chapters from the first edition have been revised and updated by expert healthcare practitioners. Meanwhile, the practical approach and helpful features that made the first edition so popular remain unchanged. The authors offer a basic introduction to pharmacological concepts, embedded in specific conditions, through case studies and self-assessment questions. By utilising a case study approach, they enable the reader to link pharmacological concepts with clinical practice. Reading this book, and carrying out the numerous self-assessment activities, will give the reader an appreciation of the value of having a sound pharmacological knowledge base in order to deliver safe practice, effective prescribing and improved patient care. Praise for the first edition: 'A useful and practical accompaniment for those studying nurse prescribing, this textbook is also a valuable resource for practitioners qualified in this extended role and those who prescribe and administer medications daily.' Valerie McGurk, Practice Development Nurse, Nursing Management 'This book is a comprehensive collection of case studies on a number of conditions, from heart failure to eye problems.' Lynda Gibbons, Registered Advanced Nurse Practitioner, Emergency Nurse
