I'm assuming your request for help is more than finding parts or ...
If the heating elements have burned out, they need to be replaced.
If the thing chronically gives warm instead of hot water, it may be undersized for your demand.
If there is lime from hard water on the heating elements, you can try to clean them, but may need to replace them.
Then you should check the thermostat on the hot water heater, since that being turned down means it does not give you hot enough water.
