Poison is an everyday part of the animal world, and an essential tool for hunting and defense. From species such as the King Cobra, Lionfish, Fat-tail Scorpion, and Poison Dart-frog to the diminutive but lethal Black Widow Spider, the author takes a look at the different types of natural venoms.

Field Guide to Mushrooms and Other Fungi of Britain and Europe

The discipline of Mushroom Biology, created by the authors of this book, has now been legitimized by references in the scientific literature and by two International Conferences devoted to the subject. This book sets the parameters of Mushroom Biology in a concise manner and also emphasizes trends and points out future directions which will lead to a greater utilization of mushrooms and mushroom products. The discipline was established to bring together persons who have in common scientific or commercial interests involving mushrooms. The authors' definition of mushroom is more broad than the usual mycological definition so that macrofungi other than Basidiomycetes can be included. Mushrooms may be edible, non-edible, poisonous or medicinal species, with hypogeous or epigeous fruiting bodies, and their texture may be fleshy or non-fleshy. Many aspects of Mushroom Biology are presented, including nutritional and medicinal uses, the role of mushrooms in bioremediation, biotechnology, and in the bioconversion of waste organic materials into forms that can enter the major nutrient cycles. Basic scientific studies involving mushroom species are also considered with an emphasis on genetics and breeding.

The British National Bibliography

Birds: ID Insights is ideal for birders of all levels. Its unique layout, comparing the plumages of similar pairs and groups of species, makes it perfect for identifying the more difficult birds found in Britain and other parts of north-west Europe. It has more images showing how to age birds than any comparable guide, and its handy compact size makes it practical for taking out into the field. The book is based on a long-running series of identification features in Bird Watching magazine. Author Dominic Couzens and artist David Nurney have spent years compiling the field notes and artworks for this series, and here their efforts are drawn together and made complete in a single volume that is easy to carry in the field and practical for birders to use. In addition they have expanded the species list from the magazine series

and added many new birds, including the likes of Subalpine Warbler, Short-toed Lark, and Red-rumped Swallow. In total, the book covers more than 230 species, with easy-to-identify species such as Magpie and Kingfisher given minimal coverage so that the more difficult ID issues can be covered as fully as possible.

The Concise Encyclopedia of Western Philosophy and Philosophers

Since the 1970s, cities world-wide have been witness to radical de-industrialisation. Manufacturing was considered incompatible with urban life and was actively pushed out. As economies have grown, public officials and developers have instinctively shifted their priorities to short-term, high-yielding land uses such as offices, retail space and housing. Inner-city growth from New York to London and even Seoul have generally come at the expense of land uses such as manufacturing or logistics. Despite the odds, manufacturing is not in terminal decay in western cities. On the contrary, it is at the opening of a new chapter. Urban manufacturing can help cities to be more innovative, circular, inclusive and resilient. Recently, with increasing interest in the circular economy, with cleaner and more compact technology, with more progressive building codes for mixed use, with increasing awareness of the impacts of social inequality and with a clearer understanding of the value chains between the trade of material and immaterial goods, cities across the world are realising that manufacturing has an important place in the 21st century urban economy. While both enthusiasm for making is increasing and the value of manufacturing is becoming increasingly evident in cities, the topic remains extremely complex and

challenging to manage. This book attempts to shed light on the ways manufacturing can address urban challenges, it exposes constraints for the manufacturing sector and provides fifty patterns for working with urban manufacturing. This book has been written as a manual to help politicians, public authorities, planners, designers and community organisations to be able to plan, discuss and collaborate by developing more productive urban manufacturing. The book is split into two parts. "
