This video ...

Warning Wearing protective gloves for this procedure is highly recommended

The use of improper transaxle fluid could result in transaxle malfunctions or failure.

At the specified intervals, the transaxle fluid should be drained and replaced. Since the fluid will remain hot long after driving, perform this procedure only after the engine has cooled down completely. Before beginning work, purchase the specified transaxle fluid, a new filter, filter seal and gasket.

Never reuse the old filter, or gasket!

Tighten the transaxle pan mounting bolts to 106 in-lbs

Haynes
