Traditionally, mechanisms are created by designer's intuition, ingenuity, and experience. However, such an ad hoc approach cannot ensure the identification of all possible design alternatives, nor does it necessarily lead to optimum design. Mechanism Design: Enumeration of Kinematic Structures According to Function introduces a methodology for systematic creation and classification of mechanisms. With a partly analytical and partly algorithmic approach, the author uses graph theory, combinatorial analysis, and computer algorithms to create kinematic structures of the same nature in a systematic and unbiased manner. He sketches mechanism structures, evaluating them with respect to the remaining functional requirements, and provides numerous atlases of mechanisms that can be used as a source of ideas for mechanism and machine design. He bases the book on the idea that some of the functional requirements of a desired mechanism can be transformed into structural characteristics that can be used for the enumeration of mechanisms. The most difficult problem most mechanical designers face at the conceptual design phase is the creation of design alternatives. Mechanism Design: Enumeration of Kinematic Structures According to Function presents you with a methodology that is not available in any other resource.

How our collective intelligence has helped us to evolve and prosper Humans are a puzzling species. On the one hand, we struggle to survive on our own in the wild, often failing to overcome even basic challenges, like obtaining food, building shelters, or avoiding predators. On the other hand, human groups have produced ingenious technologies, sophisticated languages, and complex institutions that have permitted us to successfully expand into a vast range of diverse environments. What has enabled us to dominate the globe, more than any other species, while remaining virtually helpless as lone individuals? This book shows that the secret of our success lies not in our innate intelligence, but in our collective brains—on the ability of human groups to socially interconnect and learn from one another over generations. Drawing insights from lost European explorers, clever chimpanzees, mobile hunter-gatherers, neuroscientific findings, ancient bones, and the human genome, Joseph Henrich demonstrates how our collective brains have propelled our species' genetic evolution and shaped our biology. Our early capacities for learning from others produced many cultural innovations, such as fire, cooking, water containers, plant knowledge, and projectile weapons, which in turn drove the expansion of our brains and altered our physiology, anatomy, and psychology in crucial ways. Later on, some collective brains generated and recombined powerful concepts, such as the lever, wheel, screw, and writing, while also creating the institutions that continue to alter our motivations and perceptions. Henrich shows how our genetics and biology are inextricably interwoven with cultural evolution, and how culture-gene interactions launched our species on an extraordinary evolutionary trajectory. Tracking clues from our ancient past to the present, The Secret of Our Success explores how the evolution of

both our cultural and social natures produce a collective intelligence that explains both our species' immense success and the origins of human uniqueness.

Tanja Schultz and Katrin Kirchhoff have compiled a comprehensive overview of speech processing from a multilingual perspective. By taking this all-inclusive approach to speech processing, the editors have included theories, algorithms, and techniques that are required to support spoken input and output in a large variety of languages. Multilingual Speech Processing presents a comprehensive introduction to research problems and solutions, both from a theoretical as well as a practical perspective, and highlights technology that incorporates the increasing necessity for multilingual applications in our global community. Current challenges of speech processing and the feasibility of sharing data and system components across different languages guide contributors in their discussions of trends, prognoses and open research issues. This includes automatic speech recognition and speech synthesis, but also speech-to-speech translation, dialog systems, automatic language identification, and handling non-native speech. The book is complemented by an overview of multilingual resources, important research trends, and actual speech processing systems that are being deployed in multilingual human-human and human-machine interfaces. Researchers and developers in industry and academia with different backgrounds but a common interest in multilingual speech processing will find an excellent overview of research problems and solutions detailed from theoretical and practical perspectives. The Bloomsbury Companion to Lexicography offers the definitive guide to a key area of linguistic study. Each companion is a comprehensive reference resource featuring an overview of key topics, research areas, new directions and a manageable guide to beginning or developing research in the field. Lexicography, as the practice of compiling dictionaries, has a long tradition that has been, for much of the time, largely independent of linguistics. The direct influence of linguistics on lexicography goes back around 50 years, though longer in the case of learners' dictionaries. The present volume aims to reflect on the research that has been and is being done in lexicography and to point the way forward. It tackles, among other topics, the critique of dictionaries in the electronic medium, the future of historical lexicography in the electronic mode with special reference to the online Oxford English Dictionary, and e-lexicography in general.

The Bloomsbury Companion To Lexicography

The two-volume set LNAI 7629 and LNAI 7630 constitutes the refereed proceedings of the 11th Mexican International Conference on Artificial Intelligence, MICA 2012, held in San Luis Potosí, Mexico, in October/November 2012. The 80 revised papers presented were carefully reviewed and selected from 224 submissions. The second volume includes 40 papers focusing on soft computing. The papers are organized in the following topical sections: natural language processing; evolutionary

and nature-inspired metaheuristic algorithms; neural networks and hybrid intelligent systems; fuzzy systems and probabilistic models in decision making.

Advances in Computational Intelligence

This book constitutes the refereed proceedings of the Second International Workshop on Text, Speech and Dialogue, TSD'99, held in Plzen, Czech Republic in September 1999. The 57 revised full papers and 19 posters presented were carefully reviewed and selected for inclusion in the book. The book presents state-of-the-art research and technology in the field of natural language processing with emphasis on text, speech, and spoken dialogue.

This book addresses the problems and issues surrounding teaching Chinese as a second language in the Singapore context. It identifies four main areas of concern: (1) Neglect of culture in the teaching of Chinese; (2) Difficulty of learning Hanzi (Chinese characters); (3) Cognitive and affective aspects of Chinese language learning; and (4) Authenticity of the Chinese language in a global and Singapore context. The book includes lesson design and instructional practices for re-prioritizing Chinese as a set of trainable skills, as well as teaching culture in the context of teaching the language. It also introduces the Chinese as a Second Language Readability Formula to help learners overcome their difficulties with learning Hanzi (Chinese characters), and the Attitude Toward Chinese Language Scale to help understand the various factors that can influence Chinese language learning. It also proposes a student-oriented model for conducting problem-based research, tapping into the disciplines of psycholinguistics and sociolinguistics. Resolving or minimizing the issues identified here requires action at the macro level by Chinese language researchers on a national scale, and at the micro level by classroom teachers through action research.

Teaching Chinese Language in Singapore

This handbook provides broad coverage of the languages indigenous to North America, with special focus on typologically interesting features and areal characteristics, surveys of current work, and topics of particular importance to communities. The volume is divided into two major parts: subfields of linguistics and family sketches. The subfields include those that are customarily addressed in discussions of North American languages (sounds and sound structure, words, sentences), as well as many that have received somewhat less attention until recently (tone, prosody, sociolinguistic variation, directives, information structure, discourse, meaning, language over space and time, conversation structure, evidentiality, pragmatics, verbal art, first and second language acquisition, archives, evolving notions of fieldwork). Family sketches cover major language families and isolates and highlight topics of special value to communities engaged in work on language maintenance, documentation, and revitalization.

John Sinclair's work is widely known and has had a far-reaching influence, particularly in the areas of corpus linguistics, lexis, phraseology, lexicography, grammar, and discourse analysis. This collection of papers, written by former colleagues at Birmingham University, looks at some key writings by John Sinclair, with the intention of showing why his ideas are of lasting significance. Contributions deal with the Cobuild Project (directed by Sinclair) and its innovative first dictionary; collocation and the Open Choice and Idiom Principles; the interactions between and interdependence of phraseology and grammar; semantic prosody; and the construction of meaning in text. This volume was originally published as a Special Issue of "International Journal of Corpus Linguistics" 12:2 (2007)."

Dictionaries

This volume contains selected papers from the Eight World Congress of Applied Linguistics held in Sydney in 1987. Whereas the focus of Volume I is on learning language and the standpoint of the individual learner, the contributions to Volume II are concerned not so much with individuals as with communities, and the reasons for and the nature of language maintenance and shift.

Making Dictionaries

This book covers the need for Internet of Things (IoT) technologies and artificial intelligence (AI)-aided IoT solutions for business and production. It shows how IoT-based technology uses algorithms and AI models to bring out the desired results. AI-Aided IoT Technologies and Applications for Smart Business and Production shows how a variety of IoT technologies can be used toward integrating data fabric solutions and how intelligent applications can be used to greater effect in business and production operations. The book also covers the integration of IoT data-driven financial technology (fintech) applications to fulfill the goals of trusted AI-aided IoT solutions. Next, the authors show how IoT-based technology uses algorithms and AI models to bring out the desired results across various industries including smart cities, buildings, hospitals, hotels, homes, factories, agriculture, transportation, and more. Learning, Keeping, and Using Language

This volume undertakes a detailed analysis of the latest generation of learners' dictionaries of English. It assembles the papers delivered at the eponymous symposium held at the University of Erlangen-Nürnberg in April 1997. There are a number of reasons why these dictionaries are of special lexicographic interest: 1. the type of learners' dictionary associated notably with the name of Hornby can look back on a long tradition in British lexicography; 2. competition between various publishers since the late 70s has given crucial impetus to the development of these dictionaries; 3. these new dictionaries are decisively marked by the evaluation of large-scale computer corpora. Central to the volume is the in-depth comparison of four dictionaries published in 1995: OALD5, LDOCE3, COBUILD2, CIDE. The aim is to exemplify specific differences of approach in the four dictionaries from a wide range of viewpoints (definitions, information on valency and collocations, policy on usage examples, political correctness, etc.). A number of articles also enlarge on the history of learners' dictionaries of English, the significance of corpus linguistics for lexicography, and perspectives for the future, notably in connection with the electronic media.

Distinguished linguistics scholar Anatoly Liberman set out the frame for this volume in *An Analytic Dictionary of English Etymology*. Here, Liberman's landmark scholarship lay the groundwork for his forthcoming multivolume analytic dictionary of the English language. *A Bibliography of English Etymology* is a broadly conceptualized reference tool that provides source materials for etymological research. For each word's etymology, there is a bibliographic entry that lists the word origin's primary sources, specifically, where it was first found in use. Featuring the history of more than 13,000 English

words, their cognates, and their foreign antonyms, this is a full-fledged compendium of resources indispensable to any scholar of word origins.

A Bibliography of English Etymology

This volume provides a picture of state-of-the-art studies on terminology at the European level. Addressing a range of linguistic and cultural topics, it illustrates the diversity of terminological approaches, uses and solutions. A variety of national contexts and areas, from economics and law through to gender, environment and education, is explored to illustrate emerging national issues and practices in view of measuring and assessing them against European standards. The book discusses the selection of languages and cultural attitudes that characterize European Union countries, challenging and productive as they can be. It highlights the need to acknowledge differences in specific domains and the necessity to evaluate national policies (or indeed lack of policies) regarding terminological issues, and facilitate communication and dissemination of knowledge.

History of New Netherland

Nobel is a pictographic language based on some 120 basic signs and many arrows of different shape that are mutually combined. It is named after Alfred Nobel (1833-1896), Swedish chemist and industrialist, inventor of dynamite, who left most of his fortune to a foundation that annually gives awards to individuals whose work is characterized as greatest benefit to mankind, known as Nobel Prizes. Besides the awards for sciences and literature significantly, Alfred Nobel included, among others, a prize for peace (that besides individuals, also organizations may obtain). Although it would be utopian to believe that human conflicts could be avoided if communication tools would improve, the emergence of universal languages certainly cannot make the situation worse! Universal languages are a communication tool, which makes it possible for people of no common language to communicate. They are graphic, but they should be distinguished from picture writings, which only passively offer information on some event or give messages. Universal languages have more similarity with the sign languages that are used for people who lost hearing or the sign language of American Plains Indians, who spoke different languages and could communicate by sign language that they developed. However, written language has some advantages over hand sign languages in that one can communicate at a great distance, particularly today in the age of fax and computer communications, and that one can leave messages for posterity. This is not the place to argue for or against the promise of written sign languages. Graphic (written) sign languages exist today, and the best known are Chinese characters used in China and Japan. The problem with Chinese characters is that there are too many characters and it is difficult to learn so many. It takes years for children in China and Japan to learn so many different characters, and the task would be even harder for grown people to learn if they have not done this when young. Nobel is designed to remove this difficulty and is based on the following requirements: 1. SMALL NUMBER OF BASIC SIGNS 2. SIGNS SHOULD BE EASY TO RECOGNIZE 3. SIGNS SHOULD BE EASY TO REPRODUCE 4. COMBINATIONS LIMITED TO THREE SIGNS 5. COMPLEMENTARY We have already mentioned that Nobel uses about 120 basic signs, which can be viewed as a small number, particularly in view of over 100 signs of Nobel that are so obvious that they can be easily absorbed. The other requirements are also very important. There are many signs that can be easily recognized, but in order to be acceptable for Nobel, they also need to be easily reproduced, because that will facilitate communication. Also, when making combinations of signs, one has to make some restriction in order to maintain clarity, so we decided to have no more than three signs combined into single word. Finally, the last requirement, that of complementarities, needs some explanation. Besides having signs that one can easily recognize and easily draw, one needs some structure to be embedded into composition of signs that facilitates one to remember and learn signs easily. We refer to this

structure as complementary or, broadly speaking, associational, and what it implies is that words and objects that are related should have related signs. Thus, for example, pairs of words like man-woman, cat-dog, coffee-tea, good-bad, love-hate, etc., should have signs that are in some opposition, while words like smoke-flame-fire, tree-wood-forest, water-sea-ocean, good-better-best should have signs that are in competition. With this in mind when one sees and learns the basic signs, the meaning of many combinations of signs can be in advance anticipated. This helps one to learn Nobel rather fast; not months, not weeks, perhaps not even days, but a couple of hours may suffice that one may learn hundreds and hundreds of words. In this respect, Nobel may be unique among languages written, spoken of,

English Compounds and their Spelling

The book reflects new advances in Slavonic natural language processing at the beginning of the 21th century. The whole book was dedicated to Karel Pala.

The Quarterly Journal of Education

This book constitutes the thoroughly refereed proceedings of the 8th Workshop of the Cross-Language Evaluation Forum, CLEF 2007, held in Budapest, Hungary, September 2007. The revised and extended papers were carefully reviewed and selected for inclusion in the book. There are 115 contributions in total and an introduction. The seven distinct evaluation tracks in CLEF 2007, are designed to test the performance of a wide range of multilingual information access systems or system components. The papers are organized in topical sections on Multilingual Textual Document Retrieval (Ad Hoc), Domain-Specific Information Retrieval (Domain-Specific), Multiple Language Question Answering (QA@CLEF), cross-language retrieval in image collections (Image CLEF), cross-language speech retrieval (CL-SR), multilingual Web retrieval (WebCLEF), cross-language geographical retrieval (Geo-CLEF), and CLEF in other evaluations.

In contexts of instructed second language acquisition there is a need for teaching methods that are optimally efficient, i.e. teaching interventions that generate a maximal return on learners' and teachers' investment of time and effort. In the past couple of decades, many researchers have argued that insights from Cognitive Linguistics (CL) - when suitably translated for pedagogical purposes - can make a major contribution to fostering such language teaching efficiency. This collective volume assesses and supplements those CL proposals. The first part of the book positions CL-inspired language pedagogy vis-à-vis recent trends in mainstream applied linguistics and illustrates through several case studies that language-focused instruction (including CL-inspired instruction) is a useful - if not indispensable - complement to learner-autonomous, incidental acquisition. The second part demonstrates how CL research can help pedagogues identify hitherto neglected language elements that merit explicit targeting in second language instruction. The third part consists of contributions that put the pedagogical efficiency of several CL-inspired interventions to the test in classroom experiments. Additions to the currently available armoury of teaching methods are proposed. The kinds of target language items under examination in the book range from single words over multiword units to grammar patterns. Throughout, the volume illustrates how much pedagogy-oriented Cognitive Linguistics has matured in recent years.

Terminological Approaches in the European Context

Here are the refereed proceedings of the 9th International Conference on Text, Speech and Dialogue, TSD 2006. The book presents 87 revised full papers together with 2 invited papers reviewing state-of-the-art research in the field of natural language processing. Coverage ranges from theoretical and methodological issues to applications with special focus on corpora, texts and transcription, speech analysis, recognition and synthesis, as well as their intertwining within NL dialogue systems.

The basis for this additional volume are the three volumes of the handbooks Dictionaries. An International Encyclopedia of Lexicography (HSK 5.1–5.3), published between 1989 and 1991. An updating has been perceived as an important desideratum for a considerable time. In the present Supplementary Volume the premises and subjects of HSK 5.1–5.3 are complemented by new articles that take account of the practice-internal and theoretical developments of the last 15 years. Special attention has been given to the following topics: the status and function of lexicographic reference works, the history of lexicography, the theory of lexicography, lexicographic processes, lexicographic training and lexicographic institutions, new metalexicographic methods, electronic and, especially, computer-assisted lexicography.
