Learn how to develop and implement a successful concept-based curriculum and competency assessment! Written specifically for nursing faculty by thought-leader Jean Giddens, Mastering Concept-Based Teaching and Competency Assessment, 3rd Edition provides the understanding and expertise you need to make the transition from traditional content-focused instruction to a conceptual approach to teaching and learning, and from knowledge assessment to competency assessment. New to this edition is a new chapter on differentiating concept-based and competency-based approaches. A perfect complement to Giddens' student-oriented textbook Concepts for Nursing Practice, this book is ideal for both undergraduate and graduate faculty, and also serves as a helpful study tool for faculty preparing for the Certified Nurse Educator exam. Framework for a concept-based curriculum (CBC) begins with an overview of the conceptual approach and then discusses the steps used in developing a CBC, using concepts as the infrastructure for the curriculum. Strong foundation in how to teach within a CBC examines the nature of concepts, their function in the process of learning, and the importance of being consistent in the selection and implementation of concepts. Balanced teaching strategies engage students with an open environment and learning activities demonstrating the application of information to multiple situations. Success evaluation criteria explain the importance of analyzing evaluation data to measure the achievement of student learning and for evaluating a CBC program. Misconceptions and Clarifications boxes reflect the latest research in conceptual learning to help clarify important concepts. NEW! Differentiating Concept-Based and Competency-Based Approaches chapter explains the close interrelationship of concepts and competencies. NEW! Updated content reflects the latest evidence and literature on the conceptual approach and the application of competencies within the conceptual approach. NEW! Improved graphic design and layout makes the content more visually appealing and promotes understanding.

As educators, we don't always have the time to read as we would like. This book was intended to be a quick read for that reason. It was also intended to be used during professional developments to start the conversation of each topic covered and for you as an educator to evaluate your own thoughts about each topic. This is your food for thought. Unmotivated students can be master students. Show them that you truly care and respect them and they will show you the master students they are. You can do it! I believe in you because you believe in your students.

The Unmotivated Student to Master Student

The Swedish Working Life Fund — a temporary organization functioning from 1990 to 1995 — distributed 10 billion Swedish crowns for workplace development and initiated 25,000 projects. About half of the total labor market was affected. This evaluation study, which is built on case studies as well as a survey of a representative sample of the project population, describes the emergent characteristics of organization development in Swedish enterprises and services. In order to locate the efforts of the Fund within an explanatory context, the study draws on the idea of concept-driven change, of participation in development processes, of development coalitions, of infrastructure for change and of a society, that is supportive of change.

Concept-driven Development and the Organization of the Process of Change

Striving for Excellence

A new edition of the bestselling classic – published with a special introduction to mark its 10th anniversary This pioneering account sets out to understand the structure of the human brain – the place where mind meets matter. Until recently, the left hemisphere of our brain has been seen as the 'rational' side, the superior partner to the right. But is this distinction true? Drawing on a vast body of experimental research, Iain McGilchrist argues while our left brain makes for a wonderful servant, it is a very poor master. As he shows, it is the right side which is the more reliable and insightful. Without it, our world would be mechanistic – stripped of depth, colour and value.

This textbook is intended for use in introductory biostatistics courses for health science, nursing, and biology students. It deals with research designs used for collecting data, methods for summarizing data, and testing hypotheses in health and related fields. The emphasis is on illustrating how statistics are generated and used by practitioners in health fields and interpreting crucial aspects of journal articles. Concepts are stressed rather than the usual computational methods. Every major concept is accompanied by an exercise and correct answers, and these form an integral part of the text.

Computer Support for Collaborative Learning (CSCL) is a field of study centrally concerned with meaning and the practices of meaning-making in the context of joint activity, and the ways in which these practices are mediated through designed artifacts. This volume includes abstracts of papers that were presented during interactive poster sessions at CSCL 2002. Documenting an extremely heterogeneous, productive phase of inquiry with broad social consequences, these proceedings reflect the current state of CSCL research--particularly in North America and Western Europe.

This book is about Case-Based Collaborative Learning (CBCL) for medical educators. CBCL combines elements from team-, case- and problem-based learning using a flipped classroom model. This book presents a detailed "how to" guide on how to create CBCL classroom materials, how to facilitate vivid discussions, and how to support students and faculty in a CBCL curriculum. The first chapter explores the CBCL method in context of established educational principles. The second chapter provides a step-wise guide to creating CBCL teaching materials from scratch or adapting existing resources. Chapter three discusses how to support both - faculty and students - in making the most out of in-class case discussions. The last chapter explores modifications to the CBCL method that have evolved over time in adapting to teaching remotely, as well as promoting self-directed learning skills in students. While originally developed in context of undergraduate medical education, the CBCL method is of interest to anyone in higher education that values flipped classroom methods and discussion-based teaching.

With a new chapter on the literature review, this accessible step-by-step guide to using the five major approaches to research design is now in a thoroughly revised second edition. The prior edition's user-friendly features are augmented by a new companion website with worksheets keyed to each chapter. For each approach, the text presents a template for a research proposal and explains how to conceptualize and fill in every section. Interdisciplinary research examples draw on current events and social justice issues. Unique coverage includes hot topics--replication studies, data sharing, and preregistration; tailoring proposals to different audiences; and more. Terminology commonly used in each approach is identified and key moments of ethical decision making are flagged. The book includes a general introduction to social research, an in-depth discussion of ethics, and a chapter on how to begin a research study. New to This Edition *New or expanded discussions of theory and literature in quantitative research, replication studies, preregistration of research, the critical paradigm in qualitative research, mixed methods research, approaching different kinds of organizations in community-based participatory research, and more. *Chapter on the literature review, including the ethics of citational practices. *Companion website with worksheets to aid in learning and practicing each chapter's key concepts. *Updated examples, references, and recommended readings throughout. Pedagogical Features *Multiple "Review Stops" in each chapter--quick quizzes with answer keys. *End-of-chapter writing exercises, research activities, and suggested resources. *Bolded key terms and an end-of-book glossary. *Boxed tips from experts in the respective approaches. *Pointers to downloadable worksheets throughout the chapters. *Author-created PowerPoints and chapter tests with answer keys available to instructors using the book in a course.

Summary The TOGAF 9 certification program is a knowledge-based certification program. It has two levels, leading to certification for TOGAF 9 Foundation and TOGAF 9 Certified, respectively. The purpose of certification to TOGAF 9 Certified is to provide validation that, in addition to the knowledge and comprehension of TOGAF 9 Foundation level, the Candidate is able to analyze and apply this knowledge. The learning objectives at this level therefore focus on application and analysis in addition to knowledge and comprehension. This Study Guide supports students in preparation for the TOGAF 9 Part 2 Examination, leading to TOGAF 9 Certified. This third edition contains minor updates to remove references to the TOGAF 8-9 Advanced Bridge Examination¹ and also adds four bonus practice examination questions to Appendix B. It gives an overview of every learning objective for the TOGAF 9 Certified Syllabus beyond the Foundation level.

Energy and thermodynamics

Energy is not a vector

20 mph (32 km/h) faster almost doubles the energy of a car

Total energy is kinetic plus potential

Gasoline has chemical potential energy

Thermodynamic Systems Thermal Energy

Kinetic energy of car converted to thermal energy from friction of the brakes

Entropy is a measure of "disorder," or the information required to describe microstates

2nd law of thermodynamics: Entropy of an isolated system can never decrease

Gasoline more useful for work than heat from exhaust

Exhaust will not rearrange itself to become gasoline

but gasoline can be converted to heat and exhaust

One way flow of entropy appears to be the only reason there is a forward flow of time

Electromagnetism: Study of interaction between electrically charged particles

Moving charges create magnetic fields

Moving magnetic field affects charges

Magnets always have two poles

Faraday's law

Moving magnetic field creates an electrical field

Laws of physics on moving train is same as laws of physics standing still

Energy is not continuous, but is quantized
