Washer Not Spinning - Motor Reset - Washer Not Spinning - Motor Reset by GE Appliances 5,508,571 views 13 years ago 3 minutes, 24 seconds - If your Hydrowave washer does **not**, agitate or spin after filling with water, the washer motor may need to be reset. This can be ...

If your washer fills with water but does not agitate or spin, you may need to reset your washer motor. The motor takes on a larger role in the drive system.

This fault code could shut down the drive system.

No tools are required.

Power down the unit by unplugging the washer

Wait approximately 1 minute and plug the washer back into

You now have 30 seconds after the unit is powered up to lift and lower the lid 6 times.

You only need to lift the lid 2 inches to break this connection.

If the unit fills and starts agitating, you can place your clothes inside and complete the wash cycle.
