Energy and thermodynamics

Energy is not a vector

20 mph (32 km/h) faster almost doubles the energy of a car

Total energy is kinetic plus potential

Gasoline has chemical potential energy

Thermodynamic Systems Thermal Energy

Kinetic energy of car converted to thermal energy from friction of the brakes

Entropy is a measure of "disorder," or the information required to describe microstates

2nd law of thermodynamics: Entropy of an isolated system can never decrease

Gasoline more useful for work than heat from exhaust

Exhaust will not rearrange itself to become gasoline

but gasoline can be converted to heat and exhaust

One way flow of entropy appears to be the only reason there is a forward flow of time

Electromagnetism: Study of interaction between electrically charged particles

Moving charges create magnetic fields

Moving magnetic field affects charges

Magnets always have two poles

Faraday's law

Moving magnetic field creates an electrical field

Laws of physics on moving train is same as laws of physics standing still

Energy is not continuous, but is quantized

Heisenberg's Uncertainty Principle uncertainty in momentum

Note: central cluster of electrons exaggerated for illustration. Only a probability cloud exists
