Talk about Careers in Science

Non scholae sed vitae discimus, we learn for life rather than for school. In this Roman saying, the ultimate reason for school is recognized as being a preparation for life. High school science, too, is a preparation for life, the possible careers students identify, and for defining possible future Selves.

Who Wants to be a Scientist?

Essential information for anyone considering a career in scientific research.

Put Your Science to Work

Published by the American Geophysical Union as part of the Special Publications Series. Whether you are a science undergraduate or graduate student, post-doc or senior scientist, you need practical career development advice. Put Your Science to Work: The Take-Charge Career Guide for Scientists can help you explore all your options and develop dynamite strategies for landing the job of your dreams. Completely revised and updated from the best-selling To Boldly Go: A Practical Career Guide for Scientists, this second edition offers expert help from networking to negotiating a job offer. This is the book you need to start moving your career in the right direction.

ReSearch

ReSearch: A Career Guide for Scientists is a career planning guide and practical tool for graduate students and postdocs. This book provides step-by-step processes for the assessment of career goals and the actions that can be taken in order to achieve them. ReSearch includes chapters on the basics of career planning, determining unique selling points, and navigating work-life concerns. This book also includes narratives from a number of perspectives to showcase the variety of career options available. ReSearch is written by experts with inside knowledge of how to effectively leverage skills in order to take that next step in your career, whether you are a recent graduate or are interested in transitioning into something new. This book is also a valuable resource for advisors and careers counselors who mentor students and postdocs about their career plans. Fills the knowledge gap in career planning practices for students and early career researchers in the STEM fields, particularly those in the sciences Provides

global perspectives on seeking career opportunities outside of the United States Includes strategies for how to market your transferable skill sets, network, and maximize informational interviews Includes chapters on the basics of career planning, determining unique selling points, and navigating work-life concerns

Career Ideas for Kids Who Like Science

Provides activities to uncover individual traits and abilities, information about careers in science, description of career planning resources, explanations for personal roadmaps, and profiles of individual scientists.

Survival Skills for Scientists

This book provides young scientists, from physicists through to sociologists, the counsel and tools that are needed to be their own agents and planners, to survive and succeed, hopefully even thrive in science. Making a good career based on peer-reviewed science means navigating many stressful phases from graduate school through to permanent employment. Performing artists pay agents to help them in this effort. In effect, this book is designed to allow you to act as your own agent. You are counseled to analyze yourself deeply to know clearly what you want and whether you can live with it, how to make career choices and what you should then keep in mind, when to fight and when to yield. The unwritten rules of the OC science gameOCO are explained, including how to become published and known, the pitfalls of peer review and how to evade them, papers and posters, job interviews and getting your science funded. Interspersed with this are illustrative anecdotes and a fair amount of humor. While the book is aimed at young scientists, from graduate students and beyond, more senior scientists will benefit from seeing the world from the point of view of rising scientists and become aware of the preoccupations of people in a system which has changed much from when the present senior scientists were rather younger. Sample Chapter(s). Chapter 1: Basic Choices (304 KB). Contents: Basic Choices; Basic Strategies and Actions; The Game of Science; Acquiring and Using a Reputation; Communicating your Science; Cautionary Tales; L"Envoi. Readership: All young scientists, but also all scientists and people interested in science, as well as undergraduates wondering whether to go on in science."

Guide to Non-Traditional Careers in Science

Offering practical advice and stories from scientists and professionals, this guidebook aids the reader in evaluating and finding career opportunities in non-academic research fields. It demonstrates that choices are available, providing many examples of fields (for example publishing, law, public policy and business) in which people can use their scientific training to nurture a satisfying professional life. Yet it also acknowledges that there are trade-offs involved with any veer from the traditional path.

Alternative Careers in Science

This book emerged from shared interests and conversations over many years between former Ph.D. chemists, now leaders in science policy and industry who all share a commitment to public service. While the training of Ph.D. chemists is generally targeted at a research career, the opportunities that lie beyond the degree are much more diverse. Nine Ph.D. chemists who chose careers outside of academia describe their career choices and reflect on advice they have looking back on their career path for those just starting theirs. If the stories in these pages speak to you: Welcome to the family.

The Chicago Guide to Your Career in Science

Embarking upon research as a graduate student or postdoc can be exciting and enriching—the start of a rewarding career. But the world of scientific research is also a competitive one, with grants and good jobs increasingly hard to find. The Chicago Guide to Your Career in Science is intended to help scientists not just cope but excel at this critical phase in their careers. Victor A. Bloomfield and Esam E. El-Fakahany, both well-known scientists with extensive experience as teachers, mentors, and administrators, have combined their knowledge to create a guidebook that addresses all of the challenges that today's scientists-in-training face. They begin by considering the early stages of a career in science: deciding whether or not to pursue a PhD, choosing advisors and mentors, and learning how to teach effectively. Bloomfield and El-Fakahany then explore the skills essential to conducting and presenting research. The Chicago Guide to Your Career in Science offers detailed

advice on how to pursue research ethically, manage time, and communicate effectively, especially at academic conferences and with students and peers. Bloomfield and El-Fakahany write in accessible, straightforward language and include a synopsis of key points at the end of each chapter, so that readers can dip into relevant sections with ease. From students prepping for the GRE to postdocs developing professional contacts to faculty advisors and managers of corporate labs, scientists at every level will find *The Chicago Guide to Your Career in Science* an unparalleled resource. "The Chicago Guide to Your Career in Science is a roadmap to the beginning stages of a scientific career. I will encourage my own students to purchase it."—Dov F. Sax, assistant professor of ecology and evolutionary biology, Brown University "Step-by-step, Victor Bloomfield and Esam El-Fakahany provide sound, thorough, yet succinct advice on every issue a scientist in training is likely to encounter. Young readers will welcome the authors' advice on choosing a graduate school, for example, while senior scientists will probably wish that a book like this had been around when they were starting out. With down-to-earth and occasionally humorous advice, *The Chicago Guide to your Career in Academic Biology* belongs on the bookshelf of every graduate student and advisor."—Norma Allewell, Dean, College of Chemical and Life Sciences, University of Maryland

Careers in Science and Engineering

"Careers in Science and Engineering" offers guidance to students on planning careers--particularly careers in nonacademic settings--and discusses how to obtain the education and skills necessary to attain their career goals. Profiles of science engineering professionals illustrate a variety of career paths.

My Job in Science

Would you like a job as a zoologist or marine biologist? What about a career in pharmacy or food science? This book presents readers with exciting information about different careers in the field of science. Readers will learn what each career entails, how to land the job, and what they should study in school to prepare for it. Fascinating fact boxes and sidebars are paired with photographs showing scientists on the job to keep readers interested. A perfect addition to STEM curricula, this book allows readers an inside look at the world of science careers.

Knowing Everything about Nothing

In this book John Ziman seeks the answers to crucial questions facing scientists who need to change the direction of their careers.

Cool Careers in Information Sciences

Why don't more women become scientists? And why do those who do become scientists often face more difficulties than their male counterparts? Every year, about a quarter of a million young men and women in the United States receive their first academic degree in science, mathematics, or engineering. A small fraction will eventually become research scientists. But many who start out with that goal fail to reach it--for reasons that may have less to do with their scientific ability than with their gender. Drawing on a wealth of information (699 questionnaires and 200 interviews) from men and women who gave every promise of scientific achievement, Gerhard Sonnert and Gerald Holton illuminate the partly gender-driven dynamics of "the leaky scientific pipeline." At the heart of this book are gripping personal life stories of ten women and ten men: half became highly successful scientists, the rest left research science. In their own voices, they talk candidly about their career paths, the obstacles and assists they encountered, the difficulties and rewards of attempting to combine a family life with a science career. This highly readable analysis of the gender dimension in scientific careers--and its clear-headed advice--will be of great interest to everyone considering a career in science as well as to teachers, parents, and active scientists. Academics in sociology of science and gender studies as well as decision-makers in the areas of human resources and science policy will also welcome its discussions of general issues and policy recommendations.

Who Succeeds in Science?

Based on sixty interviews with physicists at universities across the United States, *The Stars are Not Enough* offers a detailed and intimate account of the worlds in which scientists work. Joseph C. Hermanowicz looks at a range of scientists from young graduate students to older professionals well

into their careers. The result is a colorful portrait of a profession and its diverse cast of characters. These deeply personal narratives reveal dreams of fame and glory, in which scientists confess their ambitions of becoming the next Newton or Einstein. However, these scientists also discuss the meaning of success and failure. We hear their stories of aspiration and anxiety, disappointment and tragedy, hope and achievement; we are privy to their doubts and to what they consider to be their limitations and weaknesses. As the scientists age in their professions, the specter of failure often visits them, and they have to accept something less than scientific immortality or even the Nobel Prize. Ultimately these stories give us more than an inside look at the details of careers in science, they also examine ambition by uncovering the forces that drive people in their professions and by describing how these forces persist or fade over time. Ambition for greatness often ignites a career and often sustains it. Yet, as Hermanowicz's study reveals, greatness eludes nearly all people in their heroic quests for extraordinary achievement. *The Stars Are Not Enough* offers a fascinating account that will appeal to anyone interested in how people's dreams blossom and evolve.

The Stars Are Not Enough

Many science students find themselves in the midst of graduate school or sitting at a lab bench, and realize that they hate lab work! Even worse is realizing that they may love science, but science (at least academic science) is not providing many job opportunities these days. What's a poor researcher to do!? This book gives first-hand descriptions of the evolution of a band of hardy scientists out of the lab and into just about every career you can imagine. Researchers from every branch of science found their way into finance, public relations, consulting, business development, journalism, and more - and thrived there! Each author tells their personal story, including descriptions of their career path, a typical day, where to find information on their job, opportunities to career growth, and more. This is a must-read for every science major, and everyone who is looking for a way to break out of their career rut. * An insider's look at the wide range of job opportunities for scientists yearning to leave the lab* First-person stories from researchers who successfully made the leap from science into finance, journalism, law, public policy, and more.* Tips on how to track down and get that job in a new industry* Typical day scenarios for each career track* List of resources (websites, associations, etc.) to help you in your search* Completely revised, this latest edition includes six entirely new chapters

Alternative Careers in Science

There is a major demand for people with scientific training in a wide range of professions based on and maintaining relations with science. However, there is a lack of good first-hand information about alternative career paths to research. From entrepreneurship, industry and the media to government, public relations, activism and teaching, this is a readable guide to science based skills, lifestyles and career paths. The ever-narrowing pyramid of opportunities within an academic career structure, or the prospect of a life in the laboratory losing its attraction, mean that many who trained in science and engineering now look for alternative careers. Thirty role models who began by studying many different disciplines give personal guidance for graduates, postgraduates and early-career scientists in the life sciences, physical sciences and engineering. This book is an entertaining resource for ideas about, and directions into, the many fields which they may not be aware of or may not have considered.

Successful Careers beyond the Lab

Jobs using mathematics, statistics, and operations research are projected to grow by almost 30% over the next decade. *BIG Jobs Guide* helps job seekers at every stage of their careers in these fields explore opportunities in business, industry, and government (BIG). Written in a conversational and practical tone, *BIG Jobs Guide* offers insight on topics such as: - What skills can I offer employers? - How do I write a high-impact resume? - Where can I find a rewarding internship? - What kinds of jobs are out there for me? The Guide also offers insights to advisors and mentors on topics such as how departments can help students get BIG jobs and how faculty members and internship mentors can build institutional relationships. Whether you're an undergraduate or graduate student or a job seeker in mathematics, statistics, or operations research, this hands-on book will help you reach your goal?landing an internship, getting your first job or transitioning to a new one.

BIG Jobs Guide

Published by the American Geophysical Union as part of the Special Publications Series If you feel that your years in graduate school have left you ill-prepared to cope with the harsh realities of the job

market you are not alone. In a recent survey of job seekers attending the 1995 spring national meeting of the American Geophysical Union over 60% described the current state of the research job market as "bad," "dismal," or "hopeless." These individuals were not "second-rate" students from lesser schools but excellent young scientists from top-notch institutions such as Dartmouth, Johns Hopkins, Penn State, Brown, MIT and Princeton. Even the most accomplished recent graduates are finding the job market to be tough and getting tougher.

To Boldly Go

As science and technology advance, the needs of employers change, and these changes continually reshape the job market for scientists and engineers. Such shifts present challenges for students as they struggle to make well-informed education and career choices. *Careers in Science and Engineering* offers guidance to students on planning careers--particularly careers in nonacademic settings--and acquiring the education necessary to attain career goals. This booklet is designed for graduate science and engineering students currently in or soon to graduate from a university, as well as undergraduates in their third or fourth year of study who are deciding whether or not to pursue graduate education. The content has been reviewed by a number of student focus groups and an advisory committee that included students and representatives of several disciplinary societies. *Careers in Science and Engineering* offers advice on not only surviving but also enjoying a science- or engineering-related education and career-- how to find out about possible careers to pursue, choose a graduate school, select a research project, work with advisers, balance breadth against specialization, obtain funding, evaluate postdoctoral appointments, build skills, and more. Throughout, *Careers in Science and Engineering* lists resources and suggests people to interview in order to gather the information and insights needed to make good education and career choices. The booklet also offers profiles of science and engineering professionals in a variety of careers. *Careers in Science and Engineering* will be important to undergraduate and graduate students who have decided to pursue a career in science and engineering or related areas. It will also be of interest to faculty, counselors, and education administrators.

How to Make Your PhD Work A modern guide for a challenging modern PhD market The job market for PhDs in science and engineering has become immensely more challenging in the last decade. As of 2022, less than 5% of PhDs attain permanent academic positions, yet books about navigating PhD programs continue to treat permanent academic employment as the assumed norm. Today's PhDs need tools not only for completing their programs successfully, but for positioning themselves in a varied and competitive job market. *How to Make Your PhD Work* meets this need, with concrete, empowering advice that takes account of modern job market challenges and opportunities. It cuts

through widespread misconceptions about STEM careers and funding, offers tips for navigating difficult degree programs, and supplies current or prospective PhDs with the tools to radically transform their post-degree career prospects. How to Make Your PhD Work readers will also find: Detailed discussion of topics including postdoctoral fellowships, nonacademic careers, success in industry, and more Twelve stories from PhD students who talk about their relationship with their advisor, their success with their project, and their transition into their careers Worksheets and case studies designed to help PhDs map out potential career paths An author with extensive experience of the nonacademic job market and a real understanding of the challenges STEM PhDs face How to Make Your PhD Work is ideal for any STEM PhD student, prospective student, or early career researcher looking to improve their positions in the job market.

Scientists today working on controversial issues from climate change to drought to COVID-19 are finding themselves more often in the middle of deeply traumatizing or polarized conflicts they feel unprepared to referee. It is no longer enough for scientists to communicate a scientific topic clearly. They must now be experts not only in their fields of study, but also in navigating the thoughts, feelings, and opinions of members of the public they engage with, and with each other. And the conversations are growing more fraught. In *Getting to the Heart of Science Communication*, Faith Kearns has penned a succinct guide for navigating the human relationships critical to the success of practice-based science. This meticulously researched volume takes science communication to the next level, helping scientists to see the value of listening as well as talking, understanding power dynamics in relationships, and addressing the roles of trauma, loss, grief, and healing.

Summary You are going to need more than technical knowledge to succeed as a data scientist. Build a Career in Data Science teaches you what school leaves out, from how to land your first job to the lifecycle of a data science project, and even how to become a manager. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the technology What are the keys to a data scientist's long-term success? Blending your technical know-how with the right "soft skills" turns out to be a central ingredient of a rewarding career. About the book Build a Career in Data Science is your guide to landing your first data science job and developing into a valued senior employee. By following clear and simple instructions, you'll learn to craft an amazing resume and ace your interviews. In this demanding, rapidly changing field, it can be challenging to keep projects on track, adapt to company needs, and manage tricky stakeholders. You'll love the insights on how to handle expectations, deal with failures, and plan your career path in the stories from seasoned data scientists included in the book. What's inside Creating a portfolio of data science projects Assessing and negotiating an offer Leaving gracefully and moving up the ladder Interviews with professional data scientists About the reader For readers who want to begin or advance a data science career. Build a Career in Data Science

Every industrialized country is concerned with maintaining an adequate supply of individuals interested in careers in science and technology, yet little is known about these efforts outside national borders. This book represents the proceedings of an international conference on Trends in Science and Technology Careers, held in Brussels in 1993. Organized at the behest of OSEP and the OIA Committee on International Organizations and Programs, in cooperation with the European Commission (DG XII) and in response to a resolution of the International Council of Scientific Unions, the conference identified international data on career trends, assessed the research base engaged in studying science and technology careers, and identified ways in which international organizations could promote greater

interest in science and technology human resource development. The conference laid the groundwork for continuing international discussions about the best ways to study and promote careers in science and technology and national dialogues about the ways to integrate this knowledge into human resources policies.

Career Planning for Research Bioscientists is an essential careers guide for bioscience doctoral students and postdoctoral researchers. It contains a wealth of information and resources specifically targeted at research bioscientists, with practical strategies to enhance career success in an increasingly competitive job market. Advice on how to write a winning CV together with examples adapted for different jobs is presented, as well as practical exercises to assist with skills analysis and decision making. Profiles of PhD-qualified bioscientists in a range of professions including academic research, industry, science communication, management and consultancy provide valuable insights into how others have managed their careers, and tactics such as networking and using social media demonstrate how new opportunities can be discovered. The content of this book is aimed primarily at research bioscientists, however much of the advice and information will be a useful reference for other students and researchers looking for an effective career planning strategy. A companion website with additional resources is available at <http://www.wiley.com/go/blackford/career-planning> and you can visit Sarah Blackford's blog at <http://www.biosciencecareers.org/> for more information.

"...an absurdly motivating book." –A.J. Jacobs, New York Times bestselling author Don't get stuck on a career path you have no passion for. Don't waste your intelligence on something that doesn't really mean anything more to you than a paycheck. Let Isaiah Hankel help you define a focus so powerful that everything in your life will be pulled towards it. Create your purpose and change your life. Be focused. Be fulfilled. Be successful. Black Hole Focus has been endorsed by top names in business, entrepreneurship, and academia, including 4 times New York Times bestseller AJ Jacobs and Harvard Medical School Postdoc Director Dr. Jim Gould. The book is broken up into 3 different sections; the first section shows you why you need a purpose in life, the second section shows you how to find your new purpose, and the third section shows you how to achieve your goals when facing adversity. In this book, you will learn: How to understand what you really want in life and how to get it Why people with a powerful purpose live to 100 How to rapidly improve focus and change your life using the secret techniques of an international memory champion How people like Jim Carrey, Oprah Winfrey, and J.K. Rowling transformed pain into purpose How to start a business by avoiding willpower depletion and the life hack lie Black Hole Focus includes exclusive case studies from medical practitioners, research scientists, lawyers, corporate executives and small business owners who have used the techniques described in this book to achieve massive success in their own lives. About the Author: Dr. Hankel is an internationally recognized expert in the biotechnology industry and prolific public speaker. He's given over 250 seminars in 22 different countries while working with many of the world's most respected companies and institutions, including Harvard University, Oxford University, Roche Pharmaceuticals, Eli Lilly & Company, Baxter International and Pfizer. Dr. Hankel uses the science of purpose and the principles of entrepreneurship to help people achieve their biggest goals.

Understanding the fundamentals of conducting good science, that will have an impact, is the goal of every aspiring scientist. Providing a wealth of tips, How to be a Better Scientist is the book to read if you want to succeed in this competitive field. Helping readers gain an insight into what good science means and how to conduct it, this book is ideal to read cover-to-cover or dip into. It includes easily accessible guidance on topics such as: • What characteristics should a scientist have? • Understanding the hypothesis • Integrity in science • Lack of confidence and the embarrassment factor • Time management

• Coping with rejection • Interacting with the science community With its broad focus, this friendly guide will enthuse, inspire and challenge, and is an essential companion for all aspiring scientists.

How to be a Better Scientist

Having the ability to speak confidently; engage the audience; make a clear, well-argued case; and handle any tricky situations, is rarely a natural talent, but it can be learned through application and practice. *Scientists Must Speak, Second Edition*, helps readers do just that. At some point in their careers, the majority of scientists have to stand up in front of an inquisitive audience or board and present information. This can be a stressful experience for many. For scientists, the experience may be further complicated by the specialist nature of the data and the fact that most self-help books are aimed at business or social situations. *Scientists Must Speak* includes sections on: targeting your talk - knowing your audience and how to pitch to them organizing your presentation - aligning your points logically around a central key theme using visual aids effectively - how to avoid a random slide show 'practice, practice, practice' - it's a rare orator that does not need to practice taking control - preparing the room, using eye contact, and checking the audience is with you voice and language - developing a good speaking style, and help for those for whom English is a second language body language - the messages your posture, mannerisms and facial expressions convey to the audience handling question and answer sessions - taking the fear out of these expecting the unexpected - how to cope with unforeseen mishaps adapting material for different situations - how to avoid reinventing the wheel organizing a session with several speakers - how to organize or chair sessions Written by authors with many years' experience of teaching presentation techniques, this engaging text will help readers make the best of their presentations and remove some of the fear that makes them a daunting prospect.

Scientists Must Speak, Second Edition

This is the official text for the National Association of Science Writers. In the eight years since the publication of the first edition of *A Field Guide for Science Writing*, much about the world has changed. Some of the leading issues in today's political marketplace - embryonic stem cell research, global warming, health care reform, space exploration, genetic privacy, germ warfare - are informed by scientific ideas. Never has it been more crucial for the lay public to be scientifically literate. That's where science writers come in. And that's why it's time for an update to the Field Guide, already a staple of science writing graduate programs across the country. The academic community has recently recognized how important it is for writers to become more sophisticated, knowledgeable, and skeptical about what they write. More than 50 institutions now offer training in science writing. In addition mid-career fellowships for science writers are growing, giving journalists the chance to return to major universities for specialized training. We applaud these developments, and hope to be part of them with this new edition of the Field Guide. In *A Field Guide for Science Writers, 2nd Edition*, the editors have assembled contributions from a collection of experienced journalists who are every bit as stellar as the group that contributed to the first edition. In the end, what we have are essays written by the very best in the science writing profession. These wonderful writers have written not only about style, but about content, too. These leaders in the profession describe how they work their way through the information glut to find the gems worth writing about. We also have chapters that provide the tools every good science writer needs: how to use statistics, how to weigh the merits of conflicting studies in scientific literature, how to report about risk. And, ultimately, how to write.

Careers for Women in Science and Technology

John Fetzer's "*Career Management for Chemists*" provides ample, common-sense guidance on the key topics such as: Resumes and CVs, Staying Driven & Current, Personal Skills & Traits Networking, Teamwork & Leadership, Speaking & Listening Writing Research Papers, Mentoring, Behavior & Rewards The practical coverage reflects not only his long professional experience but also his insight that, especially in today's changing workplace, expectations and strategies for career management require constant re-evaluation. Provides real, common-sense, and proven means to enrich and make more rewarding a technical career. Pre-publication comments from colleagues - "Not only the student who is taking his first steps in the scientific world would profit abundantly by mining this book for views and ideas on the different sides of his chosen career. Also the seasoned scientist will be stimulated to scrutinize his own habits and pick up new thoughts, thereby becoming a more skilled instructor of his younger colleagues." J. Andersson, University of Münster, Germany "As one of the international

collaborators of Dr. John Fetzer, I want to warmly congratulate him. His efforts nicely summarize very important topics for all who work in scientific activities. But, at the same time, Career Management for Chemists also provides some real insights for many people who are not working in science. This is a nice guidebook on how to enrich our lives and help us to become more successful!! K. Jinno, Toyohashi University of Technology

Careers in Food Science provides detailed guidelines for students and new employees in the food industry to ensure a successful start to their career. Every step towards a rewarding career in this rapidly evolving industry is covered, from which classes to take in college and which degrees to earn, to internships, and finally how to land, and keep, the first job. This book also provides day-to-day examples of what to expect from the many jobs available to help students decide what to do and where to go. This second edition includes nine new chapters covering research chefs, food systems, social justice, food waste, start-ups, sustainability, and management. Several new authors offer fresh perspectives.
