

United States Air Force And Its Antecedents Published And Printed Unit Histories A Bibliography Expanded Revised Edition

[#United States Air Force history](#) [#USAF unit histories](#) [#Air Force antecedents bibliography](#) [#military aviation history](#) [#historical records bibliography](#)

Explore a comprehensive bibliography detailing the published and printed unit histories of the United States Air Force and its antecedents. This expanded and revised edition serves as an essential resource for researchers interested in USAF history and military aviation historical records.

Our thesis collection features original academic works submitted by graduates from around the world.

We sincerely thank you for visiting our website.

The document Usaf Antecedents Bibliography is now available for you.

Downloading it is free, quick, and simple.

All of our documents are provided in their original form.

You don't need to worry about quality or authenticity.

We always maintain integrity in our information sources.

We hope this document brings you great benefit.

Stay updated with more resources from our website.

Thank you for your trust.

Many users on the internet are looking for this very document.

Your visit has brought you to the right source.

We provide the full version of this document Usaf Antecedents Bibliography absolutely free.

United States Air Force and Its Antecedents

The primary focus of this work is on those privately printed unit and organizational histories produced outside the official channels of the armed services. Some official reports are included because they fall within the criteria set out below. This guide is intended to assist the user in understanding the scheme for listing the titles and the organization of entries. The unit history has been popular since the Civil War. It most often is an un-official publication written and produced by the personnel who constituted the unit. It is often an expression of pride of their accomplishments typically published just after the termination of hostilities. It can provide a wealth of detail concerning the unit's formation, combat experiences, missions etc. It often provides photographs taken by the unit members and often includes individual and/or group portraits of the personnel assigned to it. Since it was most often an un-official publication, its attention to detail and accuracy can be wanting. They were often published to bolster the moral and tended to concentrate on the positive and often ignore the negative. One of their major benefit is they often portrayed the day to day activities, hardships, and the feelings and thoughts of its members much better than many if not most of the official histories. Some of the more recent publications sponsored by the unit associations often combine the official records including after action reports and unit journal with extensive research producing extremely detailed histories. One major problem relation to the privately printed publications is that due to their nature they had extreme limited printing and distribution was most often limited to those unit member in the unit at the time of printing. They become extremely rare and can be almost impossible purchase.

United States Air Force and Its Antecedents Published and Printed Unit Histories

The primary focus of this work is on those privately printed unit and organizational histories produced outside the official channels of the armed services. Some official reports are included because they fall within the criteria set out below. This guide is intended to assist the user in understanding the scheme for listing the titles and the organization of entries. The unit history has been popular since the Civil War. It most often is an un-official publication written and produced by the personnel who constituted the unit. It is often an expression of pride of their accomplishments typically published just after the termination of hostilities. It can provide a wealth of detail concerning the unit's formation, combat experiences, missions etc. It often provides photographs taken by the unit members and often includes individual and/or group portraits of the personnel assigned to it. Since it was most often an un-official publication, its attention to detail and accuracy can be wanting. They were often published to bolster the moral and tended to concentrate on the positive and often ignore the negative. One of their major benefit is they often portrayed the day to day activities, hardships, and the feelings and thoughts of its members much better than many if not most of the official histories. Some of the more recent publications sponsored by the unit associations often combine the official records including after action reports and unit journal with extensive research producing extremely detailed histories. One major problem relation to the privately printed publications is that due to their nature they had extreme limited printing and distribution was most often limited to those unit member in the unit at the time of printing. They become extremely rare and can be almost impossible purchase. Criteria for Including Titles: * The following categories of printed are included in this listing: * Privately sponsored or Aun-official@ histories often written by the unit historian and published or printed by the unit association. The distribution of these was most often limited to members of association. * Personal narratives that are unit or organization specific or identifiable in content. These were often autobiographical accounts by unit members and often provide a better insight to the morale and actions than the official or general histories. * Career biographies and autobiographies of officers, particularly general officers, who served in numerous units, are generally not included in this compilation. * Purely photographic or pictorial histories relating to a specific unit or command providing photographs of the activities, missions, aircraft and/or equipment, airfields, etc. * Route of battle maps. Although these are more commonly found with army ground units, there are also maps that provide historical information and a description of the geographical area covered by the unit or missions flown. * Printed or published personnel rosters listing past and/or present members of unit.

United States Air Force and Its Antecedents

This bibliography lists published and printed unit histories for the United States Air Force and Its Antecedents, including Air Divisions, Wings, Groups, Squadrons, Aviation Engineers, and the Women's Army Corps.

The United States in World War I

With the centennial of the First World War rapidly approaching, historian and bibliographer James T. Controvich offers in *The United States in World War I: A Bibliographic Guide* the most comprehensive, up-to-date reference bibliography yet published. Organized by subject, this bibliography includes the full range of sources: vintage publications of the time, books, pamphlets, periodical titles, theses, dissertations, and archival sources held by federal and state organizations, as well as those in public and private hands, including historical societies and museums.

Unit Histories of World War II

Blewett tackles the massive array of reference tools in the field of US military history, providing an annotated bibliography that covers major American armed conflicts. The volume begins with general military history reference sources, followed by successive chapters on specific military eras. Other chapters cover arms control and disarmament, terrorism, intelligence, historiography, electronic information sources, library archives, museums, organizations and associations, and journals. Annotation copyright by Book News, Inc., Portland, OR

American Military History

This highly selective bibliography supplements the original bibliography developed in 1978 by Ms. Betsy C. Kysely, to support the Eighth Military History Symposium While this bibliography focuses primarily on materials published since the earlier bibliography was developed, it does include some significant materials that were published prior to 1978, but that were omitted from that edition. Emphasis in this supplement is on scholarly analysis of air power itself and scholarly depictions of its history. Like

most editions of the United State Air Force Academy Directorate of Libraries' publication, Special Bibliography Series, this compilation is limited to current holdings of the Academic Library at the Academy. It includes books, reports, government documents, and journal articles. Excluded are pictorial works, newspaper articles, works of fiction, studies of the technology of aircraft and associated weaponry, and items focused on the general history of aviation. Readers wanting information on the history of aviation, certainly prior to the Wright Brothers, are encouraged to consult the U S. Air Force Academy Friends of the Library publication, The Genesis of Flight: The Aeronautical History Collection of Colonel Richard Gimbel.

Military History

This is an important and comprehensive historical document traces the lineage of each Army Air Corps and U.S. Air Force combat group or higher organization active in World War II, from its origins to 1956. It is a concise official record of those units: their assignments, subordinate organizations, stations, commanders, campaigns, aircraft, and decorations. But it is more than that. As an important source of ready information, this volume not only serves as a reference tool for historians and researchers; but it also provides commanders with a corporate memory of vital statistics. With these facts, a unit documents its heritage, the basis for unit esprit de corps. Originally this volume had been printed in 1961. Its worth has been proven, and the demand for it has been great. With this reprint, it will continue to serve the United States Air Force in all quarters in years to come. Over a period of several years the USAF Historical Division has received hundreds of requests for brief histories of Air Force organizations. Air Force units ask for historical data they can use for the orientation of new personnel and for building morale and esprit de corps. USAF Headquarters and the commands need historical data for organizational planning. Information officers throughout the Air Force want historical materials for public relations purposes. Members and former members of the Air Force are interested in the units with which they have served. Government agencies and private individuals, for various reasons, seek information about Air Force units and their histories. As a result of the great demand for and the interest in such histories, it appeared that a book containing brief sketches of Air Force combat organizations would be of value as a reference work. The task of preparing such a volume was undertaken by the USAF Historical Division as a phase of its work on World War II. Scope. This book is concerned primarily with the combat (or tactical) groups that were active during the Second World War. Although such groups had numerous designations, nearly all fell within four major categories: bombardment, fighter, reconnaissance, and troop carrier. The book covers both the combat groups that served overseas and those that remained in the United States. It also covers combat organizations above the group level. It does not deal with provisional organizations or with air base, maintenance, supply, medical, transport, and other service or support organizations. Although this book is devoted exclusively to organizations that were active during World War II, its coverage of those organizations is not confined to the World War II period. Instead, each organization is traced back to its origin and forward to 1 January 1956, with later activations being mentioned if they took place prior to the time the draft of the book was prepared in 1957-1958. The organizations are presented under the designations they carried on 2 September 1945. For each organization there is information concerning insignia, lineage, operations, assignments, aircraft (for groups only), components, stations, commanders, campaigns, and decorations.

Air Power and Warfare

Like all chronologies, bibliographies, and encyclopedias, Air Force Combat Units of World War II serves a very special historical function. It traces the lineage of each Army Air Corps and U.S. Air Force combat group or higher organization active in World War II, from its origins to 1956. It is a concise official record of those units: their assignments, subordinate organizations, stations, commanders, campaigns, aircraft, and decorations. But it is more than that. As an important source of ready information, this volume not only serves as a reference tool for historians and researchers; but it also provides commanders with a corporate memory of vital statistics. With these facts, a unit documents its heritage, the basis for unit esprit de corps. Originally this volume had been printed in 1961. Its worth has been proven, and the demand for it has been great. With this reprint, it will continue to serve the United States Air Force in all quarters in years to come.

Air Force Combat Units of World War II - Traces the Historical Lineage of Each Army Air Corps and U. S. Air Force Combat Group Active in the Second World War

Historical bibliographies are among the strongest-selling titles in Nimble Books' public domain list for the simple reason that they are an excellent value for money. There is no better way to be confident that you know almost everything there is to know about a given body of historical literature. This reproduction, originally published by the Office of Air Force History of the United States Air Force in 1985, is according to the Foreword by Richard H. Kohn, then Air Force Historian, "a comprehensive listing of histories, monographs, chronologies, and special studies issued by the Office of Air Force History and historical offices throughout the Air Force. It excludes the periodic (monthly, quarterly, semi-annual, annual) command and unit histories. The primary purpose of the Guide is to bring together all of the writings of the Air Force History Program in one convenient bibliography." "We believe this is a valuable resource for commanders and staffs, for it includes a wide variety of studies on how the Air Force carried out planning, operations, research, logistical activities and a host of other important operational and support functions in the past. These studies address a wide variety of issues and problems. They can provide insight into 'why things are the way they are,' as well as what worked and what did not, and the reasons why. Such information is invaluable to those responsible for today's plans and operations. At the very least, used wisely, the historical information in these studies will help Air Force people make informed decisions and avoid repeating past mistakes." Other bibliographies from Nimble Books include: Annotated Bibliography of the Space Shuttle (Two Volumes) Fifty Years of Flight Research: An Annotated Bibliography of Technical Publications of NASA Dryden Flight Research Center, 1946-1996 Submarine Warfare in the 20th and 21st Centuries - A Bibliography Historical Bibliography of Sea Mine Warfare Light Infantry Forces: A Bibliography- Guide to Captured German Documents Torpedoes: A List of References in the New York Public Library

Air Force Combat Units of World War II

Abstract : This guide seeks to aid scholars and researchers to locate collections of primary and secondary documents on the Air Force. The first part deals with official Air Force depositories, which are essential to the historian writing about its operations worldwide. The second part describes the equally important collections of the National Archives and its depositories, including the pertinent papers in the Presidential Libraries. The third part covers university and college collections of personal papers of various military and civilian leaders, as well as other documents, which deal with the Air Force. Other governmental depositories-federal, state, and local-plus a number of private collections where Air Force material may be found are listed in part four. Finally, the last section describes a variety of other collections where primary and secondary materials on military, naval, and civil aviation-which directly or indirectly have impinged on the development of the Air Force-may be found.

Publications

This book is concerned primarily with the combat (or tactical) groups that were active during the Second World War. Although such groups had numerous designations, nearly all fell within four major categories: bombardment, fighter, reconnaissance, and troop carrier. The book covers both the combat groups that served overseas and those that remained in the United States. It also covers combat organizations above the group level. It does not deal with provisional organizations or with air base, maintenance, supply, medical, transport, and other service or support organizations. Although this book is devoted exclusively to organizations that were active during World War II, its coverage of those organizations is not confined to the World War II period. Instead, each organization is traced back to its origin and forward to 1 January 1956, with later activations being mentioned if they took place prior to the time the draft of the book was prepared in 1957-1958. The organizations are presented under the designations they carried on 2 September 1945. For each organization there is information concerning insignia, lineage, operations, assignments, aircraft (for groups only), components, stations, commanders, campaigns, and decorations.

Unit Histories of the United States Air Forces, Including Privately Printed Personal Narratives

The twentieth century witnessed the emergence of three-dimensionality in war: surface forces flow became prey for attackers operating above and below the earth and its oceans. The aerial weapon, prophesied for centuries, became a reality, as did air power projection forces. This insightful book by Warren A. Trest traces the doctrinal underpinnings of the modern United States Air Force, the world's only global air force. We the men and women who serve in the Air Force, but also our fellow airmen in America's other military services are the heirs and beneficiaries of a long heritage of doctrinal development and military thought. Our predecessors pursued a vision of airborne global reach and

power that often put them at odds with those who could not break free of the confines of conventional thought and lock-step traditionalism. Fortunately, they had the courage of their convictions and the faith in their vision to continue to pursue the goal of global air power despite such resistance. Today, America is a genuine aerospace power, and that pioneering vision dating to the days of the Wright brothers, has expanded to encompass operations in space and between the mediums of air and space. As we approach the new millennium, it is well to ponder the lessons and the history of how a small group of truly gifted airmen transformed their nation's military establishment, and, in so doing, the world around them.

Guide to Air Force Historical Literature 1943-1983

Traces the usage of- and meaning given to- the terms "roles and missions" relating to the armed forces and particularly to the United States Air Force, from 1907 to the present.

The history of officer social origins, selection, education and training since the eighteenth century an introductory bibliography.

This volume is a study of the origins and evolution of the Air National Guard. This history was written during 1978-1979 by the author as part of his doctoral program in military history. The expanding role of the Guard and its close cooperation with the Air Force are the author's themes, explaining the rise of the Guard to the prominence it plays in today's air operations.

An Air Force Reading Guide

USAF Manpower in Limited War, 1964-1967 discusses the Air Force effort to augment its manpower resources to meet the rapidly expanding requirements of the Vietnam war. Prior to the summer of 1965, when Southeast Asia operations sharply increased, the USAF manpower pool had been contracting as a result of previous decisions and actions. Thereafter, the trend was reversed and the Air Force undertook to enlarge its base as quickly as possible, although facing serious shortages of qualified officers and airmen. Its situation was made more difficult by competition from civilian industry. Many experienced USAF personnel --pilots, technicians, and other professionals--were drawn from the service by attractive salaries offered by the expanding private sector of the economy. Since new recruits were usually unskilled, the Air Training Command and many combat units had to shoulder the heaviest training burden since the Korean War. An unusual amount of strain, confusion, and overwork followed and, at times, deteriorated the combat readiness of many units not directly involved in the war. Consequently, the Air Force sought to, improve its management procedures to insure the most effective utilization and retention of its trained personnel. This study is the third in a series written by Dr. George F. Lemmer of the USAF Historical Division Liaison Office (AFCHO). Its predecessors were: *The Changing Character of Air Force Manpower, 1958-1959*, issued in April 1961, and *USAF Manpower Trends 1960-1963*, published in March 1965.

United States Air Force History Publications

Except in a few instances, since World War II no American soldier or sailor has been attacked by enemy air power. Conversely, no enemy soldier or sailor has acted in combat without being attacked or at least threatened by American air power. Aviators have brought the air weapon to bear against enemies while denying them the same prerogative. This is the legacy of the U.S. Air Force, purchased at great cost in both human and material resources. More often than not, aerial pioneers had to fight technological ignorance, bureaucratic opposition, public apathy, and disagreement over purpose. Every step in the evolution of air power led into new and untrodden territory, driven by humanitarian impulses; by the search for higher, faster, and farther flight; or by the conviction that the air was the best way. Warriors have always coveted the high ground. If technology permitted them to reach it, men, women, and an air force held and exploited it -- from Thomas Selfridge, first among so many who gave that "last full measure of devotion"; to "Women's Airforce Service Pilot Ann Baumgartner, who broke social barriers to become the first American woman to pilot a jet; to Benjamin Davis, who broke racial barriers to become the first African American to command a flying group; to Chuck Yeager, a one-time non-commissioned flight officer who was the first to exceed the speed of sound; to John Levittow, who earned the Medal of Honor by throwing himself over a live flare to save his gunship crew; to John Warden, who began a revolution in air power thought and strategy that was put to spectacular use in the Gulf War. Industrialization has brought total war and air power has brought the means to overfly an enemy's defenses and attack its sources of power directly. Americans have perceived air power

from the start as a more efficient means of waging war and as a symbol of the nation's commitment to technology to master challenges, minimize casualties, and defeat adversaries. This eight-two page book concludes that "future conflicts will bring new challenges for air power in the service of the nation."

United States Air Force History

This manuscript is part of a continuing series of historical volumes produced by the Office of Air Force History in direct support of Project Warrior. Since its beginning in 1992, Project Warrior has captured the imagination of Air Force people around the world and reawakened a keener appreciation of our fundamental purpose as Service: to deter war, but to be prepared to find and win should deterrence fail.

Air Force History Publications

Except in a few instances, since World War II no American soldier or sailor has been attacked by enemy air power. Conversely, no enemy soldier or sailor has acted in combat without being attacked or at least threatened by American air power. Aviators have brought the air weapon to bear against enemies while denying them the same prerogative. This is the legacy of the U.S. Air Force, purchased at great cost in both human and material resources. More often than not, aerial pioneers had to fight technological ignorance, bureaucratic opposition, public apathy, and disagreement over purpose. Every step in the evolution of air power led into new and untrodden territory, driven by humanitarian impulses; by the search for higher, faster, and farther flight; or by the conviction that the air way was the best way. Warriors have always coveted the high ground. If technology permitted them to reach it, men, women, and an Air Force held and exploited it -- from Thomas Selfridge, first among so many who gave that "last full measure of devotion"; to Women's Air Force Service Pilot Ann Baumgartner, who broke social barriers to become the first American woman to pilot a jet; to Benjamin Davis, who broke racial barriers to become the first African American to command a flying group; to Chuck Yeager, a one-time noncommissioned flight officer who was the first to exceed the speed of sound; to John Warden, who began a revolution in air power thought and strategy that was put to spectacular use in the Gulf War. This book provides a short history of military air power in the United States from the Civil War to the Persian Gulf War. Chapters are as follows: The Genesis of American Air Power; Trial and Error in World War I; Interwar Doctrine, Organization, and Technology; World War II -- Global Conflict; Air Power in the Nuclear Age; Limited War in Korea; The "New Look" Air Force; Flexible Response and Vietnam; The Cold War Concluded; Air Power Triumphant -- The Gulf War; and The Future⁷.

Air Power and Warfare

En gennemgang af udviklingen inden for taktisk flystøtte

Summary of Activities

In the last decade of the twentieth century, today's United States Air Force marks the fiftieth anniversary of its part in a national effort that opposed a coalition of enemies in a global war. American and allied air forces in the conflict for the first time achieved striking range and effectiveness making air power a force equal to that of traditional armies and navies. The Center for Air Force History has prepared this narrative to commemorate the accomplishments of American air power in World War II and present to the American people a record of valor in the name of freedom. Partial contents include : A Weapon and an Idea ; Europe in Flames ; In Desperate Battle ; Building Air Power ; Defeating Italy and Germany ; Victory Over Japan ; A New Age ; Theater Maps ; Air Forces Lineages.

American Book Publishing Record

Over a period of several years the USAF Historical Division has received hundreds of requests for brief histories of Air Force organizations. Air Force units ask for historical data they can use for the orientation of new personnel and for building morale and esprit de corps. USAF Headquarters and the commands need historical data for organizational planning. Information officers throughout the Air Force want historical materials for public relations purposes. Members and former members of the Air Force are interested in the units with which they have served. Government agencies and private individuals, for various reasons, seek information about Air Force units and their histories. As a result of the great demand for and the interest in such histories, it appeared that a book containing brief sketches of Air Force combat organizations would be of value as a reference work. The task of preparing such a volume

was undertaken by the USAF Historical Division as a phase of its work on World War II. This book is concerned primarily with the combat (or tactical) groups that were active during the Second World War. Although such groups had numerous designations, nearly all fell within four major categories: bombardment, fighter, reconnaissance, and troop carrier. The book covers both the combat groups that served overseas and those that remained in the United States. It also covers combat organizations above the group level. It does not deal with provisional organizations or with air base, maintenance, supply, medical, transport, and other service or support organizations. Although this book is devoted exclusively to organizations that were active during World War II, its coverage of those organizations is not confined to the World War II period. Instead, each organization is traced back to its origin and forward to 1 January 1956, with later activations being mentioned if they took place prior to the time the draft of the book was prepared in 1957-1958.

Air Force Combat Units of World War II

The United States Air Force Historical Research Center and its predecessor organizations have over the years received thousands of requests for brief histories of Air Force organizations. Wing commanders ask for historical data that can be used to introduce the unit to new personnel, build morale, and improve "esprit de corps." Headquarters USAF and the major commands require historical information to plan organizational changes. Officers throughout the Air Force need historical material for public affairs purposes. Former members of the Army Air Forces and the Air Force are interested in the heritage and history of the organizations in which they served. Government agencies and private individuals, for a variety of reasons, also want to know about Air Force establishments and units and their histories. Because of the interest in these lineage and honors histories, the USAF Historical Division in the late 1950s compiled a reference volume of Air Force combat organizations-groups, wings, divisions, commands, and air forces. Published in 1961, this volume focused exclusively on organizations active during World War II. Historians traced each organization from its origin to 1 January 1956. A companion volume followed, containing the histories of combat squadrons active between 7 December 1941 and 2 September 1945. These squadron histories were carried through 5 March 1963 (the fiftieth anniversary of the 1st Aero Squadron, the first Army unit to be equipped with aircraft for tactical operations). This present volume, the third in the series, is devoted to the Air Force-controlled (AFCON) combat wings of the post-World War II United States Air Force. All of these wings feature numerical designations up to three digits (1 through 706); only five possess history and honors from World War II. Each wing's history is traced from its origin through September 1977, when the Air Force celebrated its thirtieth anniversary as a separate service.
