Saxon math programs produce confident students who are not only able to correctly compute, but also to apply concepts to new situations. These materials gently develop concepts, and the practice of those concepts is extended over a considerable period of time. This is called "incremental development and continual review." Material is introduced in easily understandable pieces (increments), allowing students to grasp one facet of a concept before the next one is introduced. Both facets are then practiced together until another one is introduced. This feature is combined with continual review in every lesson throughout the year. Topics are never dropped but are increased in complexity and practiced every day, providing the time required for concepts to become totally familiar. Algebra 1/2, third edition is made up of five instructional components: Introduction of the New Increment, Examples with Complete Solutions, Practice of the Increment, Daily Problem Set, and Cumulative Tests. Algebra 1/2 covers all topics normally taught in pre-algebra, as well as additional topics from geometry and discrete mathematics. It is recommended for seventh-graders who plan to take first-year algebra in the eighth grade, or for eighth-graders who plan to take first-year algebra in the ninth grade. Algebra 1/2 represents the culmination of the study of pre-algebra mathematics. This set contains a student text, answer key and test forms. A solutions manual is available separately. Grade 8.

This new collection of papers from leading experts provides an overview of cutting-edge research in Old World zooarchaeology. The research presented here spans various areas across Europe, Western Asia and North Africa – from the Mediterranean to the Atlantic. Several chapters focus on Iberia, but the eastern Mediterranean and Britain are also featured. Thematically, the book covers many of the research areas where zooarchaeology can provide a significant contribution. These include animal domestication, bone modifications, fishing, fowling, economic and social status, as well as adaptation and improvement. The investigation of these topics is carried out using a diversity of approaches, thus making the book also a useful compendium of traditional as well as more recently developed methodological applications. All contributions aim to present zooarchaeology as a discipline that studies animals to understand people, and their richly diversified past histories. This will be a valuable source of information not just for specialists, but also for general archaeologists and, potentially, also historians, palaeontologists and geographers, who have an interest for the research themes discussed in the book. The book is dedicated to Simon Davis, who has been a genuine pioneer in the development of modern zooarchaeology. It presents hugely stimulating case studies from the core areas where Davis has worked in the course of his career.
