Systems of Family Therapy

First published in 1987. This book connects Adlerian theory, defined as a human systems approach, with the other systems theories of family therapy. By comparison and contrast with five other popular family therapy theories, the authors suggest that Adlerian family therapy can well serve as a much-needed integrative model—a need often stressed in the literature and in many conference presentations. Adlerian psychology is described as an open system theory that provides the theoretical base for synthesizing the multitude of concepts and techniques now extant in the burgeoning field of family therapy. *Systems of Family Therapy* fulfills the need for integration and synthesis and enables clinicians to make use of the broad range of ideas and methods generated in contemporary family therapy theories within an internally consistent framework. Chapters describe the history of the theory, basic principles and concepts, structure of the therapy, the behavior change model, and specific techniques for conducting the therapy. Many case examples are used throughout. The volume is enhanced by five distinguished contributing authors who are skilled in both Adlerian theory and another major theory. They each make a detailed comparison of the two theories with respect to history, major concepts, definitions of well and dysfunctional families, diagnoses, change models and techniques, and a summary of their findings. The theories analyzed are Satir's model, the M.R.I. Interactional View, Strategic therapy, Structural therapy, and Rational-Emotive therapy.

Family Therapy Techniques

Family Therapy Techniques briefly reviews the basic theories of marriage and family therapy. It then goes into treatment models designed to facilitate the tailoring of therapy to specific populations and the integration of techniques from what often seems like disparate theories. Based on the assumption that no single approach is the definitive approach for every situation, the book leads students through multiple perspectives. In teaching students to integrate and tailor techniques, this book asks them to take functional methods and approaches from a variety of theoretical approaches, without attempting to reiterate the theoretical issues and research covered in theories courses.

Systems and Psychoanalysis

This book demonstrates how accomplished clinicians can promote the emergence of a richness and creativity that appeals to practitioners of systemic family therapy, not least because of the immediate relevance and usefulness of the ideas. It will be useful to the field of psychotherapy.

Individual and Family Therapy

To find more information about Rowman and Littlefield titles, please visit www.rowmanlittlefield.com.

Integrating Family Therapy

"Integrating Family Therapy" brings together family psychology and systems theory to explore the ways that systems therapists actually think and behave to bring about needed family change in the context of other systems. /// The theme of integration is carried through the book on several levels: integration of the family with school, work, medical, and other social systems; integration of research, theory, and systemic practice; and integration of methods and techniques from diverse schools of family therapy. /// With generous illustrative case material, [this volume] suggests ... ways of helping families in the current social context. (PsycINFO Database Record (c) 2004 APA, all rights reserved).

Primer of Adlerian Psychology

A *Primer of Adlerian Psychology* offers an accessible, yet very learned, introduction to Adlerian Psychology. Also known as Individual Psychology, the approach stresses the unity of the individual,

the subjective choices he or she makes and the goals the individual works towards he or she moves through life. Therapists can apply this theory in a variety of settings with populations of all ages, making it a highly practical and valuable approach. Written by two scholars with extensive knowledge and experience in this school of thought, this book covers the basic tenets of Individual Psychology geared toward those students and clinicians who are yet unfamiliar with Adler's work.

Contributions to Adlerian Psychology

There is no available information at this time.

Solving Problems In Couples And Family Therapy

Aimed primarily at clinicians who are required to find ways to interrupt patterns of destructive behaviour in couples and families, this text provides a compilation of multi-disciplinary techniques and flexible strategies to accomplish 14 major therapeutic tasks.

Family Therapy

The systemic-cybernetic framework in Family Therapy provides a framework for understanding people and families in context. The text-divided into three sections including The Systemic Framework, The Practice of Family Therapy, and The Systemic Practitioner-includes historical information, current developments, and ongoing debates. Book jacket.

Origins and Originality in Family Therapy and Systemic Practice

The founding volume of the European Family Therapy Association book series presents new ideas confirming the crucial importance of systemic family therapy for family practice. Spanning paradigms, models, concepts, applications, and implications for families as they develop, experts in the field demonstrate the translatability of session insights into real-world contexts, bolstering therapeutic gains outside the treatment setting. Chapters emphasize the potential for systemic family therapy as integrative across theories, healing disciplines, modes of treatment, while contributors' personal perspectives provide unique takes on the therapist's role. Together, these papers promote best practices not only for therapy, but also research and training as professionals delve deeper into understanding the complexity and diversity of families and family systems. "div>Included in the coverage:• The story of an encounter: the systemic approach at the heart of innovative clinical practice. • Steps to an ultramodern family therapy. • From networks to resonance: the life journey of a family therapist. • How to give a voice to children in family therapy. • Systemic theory and narratives of attachment: integration, formulation, and development over time. • Virtual relations and globalized families: the Genogram 4.0 interview. Origins and Originality in Family Therapy and Systemic Practice offers practitioners and other professionals particularly interested in family therapy practice timely, ethical tools for enhancing their work./div

Adlerian, Cognitive, and Constructivist Therapies

Over the past 20 years, there has been growing interest in integration among psychotherapy theorists and practitioners. Historically, allegiance to specific theories or "systems" of psychotherapy was emphasized and even expected by particular "schools of thought." However, the current zeitgeist emphasizes common ground and convergent themes. Within this context is Adlerian theory/therapy, having originated in the first half of the 20th century relevant for today's integrative discussion. The diverse authors in this book demonstrate that the Adlerian approach soundly resonates with contemporary cognitive and constructivist therapies, and is indeed a relevant "voice" for inclusion in contemporary dialogues regarding integration. Part I includes chapters by Adlerian and Constructivist authors. Part II includes perspectives from Adlerian and Cognitive therapists. Part III presents responses to the prior chapters representing all three systems approaches.

Intervention & Strategies in Counseling and Psychotherapy

Psychology has recently shifted toward a phenomenological approach closely aligned with theories originally put forth by noted psychologist Alfred Adler. However, modern approaches are often presented in a language that differs from the original theories, with no acknowledgment to the contributions of Adler. Interventions and Strategies in Counseling and Psychotherapy corrects this oversight, illustrating the many ways in which Adlerian ideas underpin and influence contemporary therapeutic approaches. Original chapters by leading thinkers in the field address the practice of counseling and psychotherapy

from a social-cognitive perspective and logically combine classic Adlerian theories with proven and effective methods from other approaches. The book covers a wide range of topics including play therapy, parent education, couples therapy, and problem-solving counseling. This book is essential reading not only for Adlerian psychologists, but also counselors, psychologists, and psychotherapists of any theoretical stripe who wish to keep their practical skills up-to-date. It is also of use to graduate and doctoral students enrolled in counseling and psychology programs.

Comprehensive Handbook of Psychotherapy, Interpersonal/Humanistic/Existential

Now available in paperback. In this volume, theoretical frames, modalities, and applications are examined for Interpersonal/Humanistic/Existential psychotherapy. Topics range from "Culturally Sensitive Psychotherapy with Children" to "Spiritually Sensitive Therapy" and "Existential Treatment with HIV/AIDS clients."

Integrating Individual And Family Therapy

Presents a comprehensive model of integrating individual and family therapy with clinical examples to illustrate the model. Throughout the book, the importance of tailoring the structure and process of therapy to meet the particular needs of specific individuals and families is emphasized.

Family Therapy

This text will provide a comprehensive overview of traditional and evolving theoretical models of family therapy and intervention techniques. The objective of this text is to enable a student to gain beginning proficiency as a family therapist along with understanding the impact of a client's race, ethnicity, religion, sexual orientation, disability, gender issues, age, socioeconomic status, disability, and differences from the "traditional" family on family assessment and intervention. The book has six goals, as follows: (1) acquaint students with the theoretical underpinnings of various approaches to assessing and intervening with families (2) assist students in understanding the similarities, differences and strategies of change among the major models of family therapy (3) introduce the student to the current available research on the effectiveness of different approaches to family intervention (4) help students assess family functioning from a life cycle perspective and make a valid plan, taking into account client's race, ethnicity, religion, sexual orientation, disability, gender issues, age, socioeconomic status, disability, and differences from the "traditional" family (5) help students develop techniques and strategies related to stages of the intervention in family therapy (6) enable the student to critique the appropriateness of the theoretical models and its intervention techniques according to family developmental factors as well as the particular needs of the family. Features: (1) Comprehensive coverage of family therapy theory and research (2) Presentation of clinical process issues unique to family therapy (3) Inclusion of family life cycle and development issues and the impact on family assessment and treatment planning (4) Interventions in diverse family structures (5) Interventions with special family issues such as substance abuse, domestic violence and poverty (6) An emphasis throughout on helping students to develop beginning competencies in family therapy practice (7) Numerous case examples

Constructing Professional Identity Through an Online Community: Distance Supervision in a Graduate Counseling and a Graduate Marriage and Family Therapy Program

While distance education is solidly entrenched in the American educational scene, clinical training using distance learning technology is not yet so clearly accepted. A review of the literature found very few studies of the use of Internet technology for clinical training. This study used semi-structured interviews combined with Giorgi's method of phenomenological analysis of experiences of students and site supervisors involved in the Amridge University clinical training program. The purpose of the study was to examine the process by which master's degree students are able to construct their professional identity in a virtual environment. Both supervisors and students reported phenomenological evidence that professional identity can in fact be constructed through group interactions based in an Internet class experience.

Enlarging the Therapeutic Circle

First Published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

Theoretical Models of Counseling and Psychotherapy

The fourth edition of *Theoretical Models of Counseling and Psychotherapy* provides a comprehensive overview of a variety of major counseling theories and focuses on the integration of different theoretical models. With new information on multiculturalism and diversity, the book offers a detailed description of the philosophical basis for each theory as well as historical context and biographical information on each theory's founder. Chapters include new case excerpts and clinical examples, and each chapter follows a consistent structure in its exploration of each theory's features, including its approach to and ideas on personality development, human nature, the role of environment, the change process in therapy, and contributions to the mental health field. Theory-specific information on diagnosis, psychopharmacology, spirituality, and gender issues is also discussed, and there is an added emphasis on diversity and social justice issues. The book is accompanied by instructor and student resources where professors and students will find exercises and course material that will further deepen their understanding of counseling theory and allow them to easily bridge classroom study to future practice. Available for free download for each chapter: PowerPoint slides and a testbank of 25 multiple-choice questions.

Essence of Healing

Dr. Arthur Mones reflects on a 45-year career in psychotherapy and points out what has worked and what mistakes he's made to provide guidance for new and seasoned practitioners. Dr. Mones traces his own career development in parallel with the historical changes in psychotherapy. The reader is introduced to the Internal Family Systems (IFS) orientation that guides Dr. Mones' practice and learns how this system can be applied to conceptualize client symptomology from an adaptive strength-based framework to help clients experience improved mental health. Case examples illustrate the use of IFS as a practical treatment for a variety of psychiatric disorders. Callout text, illustrated notation, guided exercises and questions, and defined terms make the text interactive and engaging, making the book suitable for use as a teaching aide in a class, for practitioners to learn a new approach to family therapy, for those interested in learning more about their own mental health and useful strategies to improve functioning, or for clinicians to find companionship in the wisdom, wit, and insightful reflections of Dr. Mones on his academic, clinical, and personal growth in the field of psychotherapy. The book traces the history of family therapy. It starts with its multidisciplinary origins in systems theory, as a non-pathologizing treatment meant to effect lasting change by addressing the immediate causes of individual dysfunction—the family and surrounding systems. The colorful and dedicated early pioneers in the field and their specific contributions to the field are reviewed. Dr. Mones weaves in his own personal experiences working with these individuals and what he has taken as valuable therapeutic knowledge to form his own integrated practice. Dr. Mones describes his career-long quest to find the essence of healing—what are the essential elements that makes psychotherapy effective and brings relief to individuals suffering a wide range of disorder from trauma and dysfunctional systems. Readers will benefit from Dr. Mones' decades-long experience as a supervisor and teacher through his writing and learn how, they too, can find the meaningful parts of therapy that work to inform their own practice to create lasting change in their clients.

The Quick Theory Reference Guide

Since the beginning of the concepts of family therapy, mental health professionals have known that the family -- the system -- is a powerful source of support for change or a powerful force for resistance to change. Some professionals work with individuals, some with families and some with groups. However, all work with the context of the systems -- family, group, community, country, etc. Students, especially beginning students, are overwhelmed and confused at the variety of approaches to working with clients. Many programs introduce students to individual as well as systems concepts in the course of training. Students need assistance in learning this variety of theories. They need to be able to compare and contrast theories and techniques to determine when and where to utilise the best skills in order to facilitate client change. Dr. Karin Jordan has compiled a comprehensive text that enables the students to discover each theory as it is presented in its purist form. The text is accessible yet the content provides comprehensive knowledge of each theory. Dr. Jordan has brought together the master educators and clinicians in our fields to write about their particular expertise.

The Handbook of Educational Theories

Although educational theories are presented in a variety of textbooks and in some discipline specific handbooks and encyclopedias, no publication exists which serves as a comprehensive, consolidated

collection of the most influential and most frequently quoted and consulted theories. There is a need to put such theories into a single, easily accessible volume. A unique feature of the Handbook is the way in which it conveys the theories. The organization of the chapters within each section makes the volume an easy-to-use and understandable reference tool as researchers and practitioners seek theories to guide their research and practice and as they develop theoretical frameworks. In addition to the traditional theories presented, the Handbook includes emerging theories for the 21st Century as well as presenting practical examples of the use of these theories in research from dissertations and published articles. An appendix which indicates which theories have instruments associated with them and where those instruments can be found is also included. The Handbook consists of 12 sections. Section I provides the introduction with a focus on what constitutes good theory as well as how theory guides research and practice. The remaining sections address Philosophical Educational Constructs, Learning Theory, Instructional Theory, Curriculum theory, Literacy and Language Acquisition Theory, Counseling Theory, Moral Development Theory, Classroom Management Theory, Assessment Theory, Organizational Theory, and Leadership/Management Theory. Each section consists of an overview written by the section editor of the general theoretical concepts to be addressed by the chapter authors. Each chapter within the section will include (a) a description of the theory with goals, assumptions, and aspects particular to the theory, (b) the original development of and interactions of the theory, (c) validation of the theory, (d) generalizability of the theory across cultures, ethnicities, and genders, (e) the use and application of the theory, (f) critiques of the theory, (g) any instruments associated with the theory, and (h) two to five particular studies exemplifying particular theories as individuals have used them in theoretical framework of dissertations or published articles and be written by the original theorist or prominent contributors to the theory. The Handbook is intended for graduate students enrolled in research courses or completing theses and dissertations. Additionally, professors of all educational disciplines in the social sciences would be an interested audience. There is also potential use of the text as administrators, counselors, and teachers in schools use theory to guide practice. As more inquiry is being promoted among school leaders, this book has more meaning for practitioners.

Family Art Therapy

Family Art Therapy is designed to help the reader incorporate clinical art therapy intervention techniques into family therapy practice. Expressive modalities are often used in work with families, particularly visual art forms, and there is already considerable evidence and literature that point to a positive link between the two. This text is unique in that it draws together, for the first time in a single volume, an overview of the evolution of the theories and techniques from the major schools of classic family therapy, integrating them with practical clinical approaches from the field of art therapy.

Family Therapy: A Systemic Integration

A comprehensive, user-friendly guide to marriage and family therapy that takes a holistic view to look at people within the context of their environment. Family Therapy helps students understand the process of shifting from an individual psychology paradigm to a cybernetic or systems paradigm. The text is divided into three sections: "The Systemic Framework," "The Practice of Family Therapy," and "The Systemic Practitioner," and it includes historical information, current developments, and ongoing debates. Various family and developmental theories are examined. The family therapy models considered include psychodynamic, natural systems, experiential, structural, communications, strategic, behavioral/cognitive, and several post-modern approaches. Assessment, intervention, training and supervision, research, and epistemological challenges are discussed within the context of practice. Learning Goals Upon completing this book readers will be able to: Describe and compare various family therapy models Discuss practical applications for different family and developmental theories Review and assess unique family systems to determine the appropriate family therapy model Understand how concepts with the same name differ in meaning at different levels (i.e. 1st order versus 2nd order cybernetics)

The Handbook of Systemic Family Therapy, The Profession of Systemic Family Therapy

This first volume of the The Handbook of Systemic Family Therapy includes extensive work on the theory, practice, research, and policy foundations of the profession of CMFT and its roles in an integrated health care system. Developed in partnership with the American Association for Marriage and Family Therapy (AAMFT), it will appeal to clinicians, such as couple, marital, and family therapists,

counselors, psychologists, social workers, and psychiatrists. It will also benefit researchers, educators, and graduate students involved in CMFT.

Integrated Family Therapy

This book provides an overview of the basic concepts of a systems theoretical perspective using families and family therapy as examples and illustrations of their application in professional practice. This meta-perspective focuses on viewing problems in context. The difference between first-order and second-order cybernetics is explicated. Readers then are invited to see themselves as parts of the systems with which they are working consistent with a second-order cybernetics perspective. Along the way a difference between modernism and post-modernism as well as constructionism and social constructionism also are described. In addition, theories of individual and family development are presented with implications for their use in family therapy. The book concludes with more than 100 examples of how the meta-perspective of systems theory can be used in work with families.

Systems Theory and Family Therapy

Patients with antisocial personality disorder (APD) have traditionally been considered difficult to treat, or even untreatable, with psychotherapy. Recent clinical and research developments, however, have begun to change this view. In this book, both experienced and novice clinicians will gain an understanding of the developments in this area of psychotherapy. Rotgers and Maniaci present experts in the field of various models of treatment, among them Adlerian, biosocial-learning, motivational interviewing, Rogerian and psychopharmacological, to identify treatment goals, select assessment tools, conceptualize progression, pinpoint pitfalls, develop techniques, and move toward a successful therapeutic completion. By providing a brief overview of APD, discussing the ongoing controversies regarding the construct of APD, and assessing the responses to the same set of questions posed to each expert, the authors offer a glimpse into the difficult world of antisocial personality disorder.

Antisocial Personality Disorder

This work reflects the author's three decades of clinical practice with children and their families, and adults and their families. Written for students and professionals, this book integrates the two approaches: art therapy and family systems. Although much has been written on art therapy and much, much more literature exists on family therapy, few integrate the two theoretical approaches. The structure of this book reflects the author's personal approach to art. Her art media are painting and combining found objects. The overall theme of family can quickly be seen within it, but this theme is overlaid with art, archetypal patterns and meanings, and symbolic enactments. It is also interfaced with personality development, and in this 'era of the brain,' with neurobiological research. The introduction begins with a brief introduction to Randy and his Dad and Stepmother. Chapter Two begins with the question: 'What is a family?' Chapter Three introduces the reader to the 'Cycle of Love' and the family influences in personality development, seen in personality theorists and theories (e.g., Freud, Jung, attachment and object relations, Eriksson, and Piaget). Stories about Michelle, Elizabeth, Tucker and Carl provide theoretical examples. Since more and more family therapy practice includes violence associated with the unmet basic human needs of nourishment and nurturing, Chapter Four, 'The Cycle of Violence,' begins with a discussion of violence and its effect on early childhood environments. Chapter Five continues the theme of violence within families, and Chapter Six, 'The Cycle of Healing,' includes a discussion of resilience illustrated by a variety of stories from an integration of family and art therapy. Appendix A is filled with the practical 'how to's' of family art therapy. Appendix B includes the 'how to' interventions, and Appendix C includes key terms and concepts of a select group of family therapy theorists.

HOME IS WHERE THE ART IS

This volume traces the modern critical and performance history of this play, one of Shakespeare's most-loved and most-performed comedies. The essay focus on such modern concerns as feminism, deconstruction, textual theory, and queer theory.

Marriage Enrichment

As important as intimacy is in our personal and professional lives, intimacy as a theoretical and clinical factor still remains a phenomenon. Contributors to this work examine the many definitions of intimacy,

putting forth a provocative discussion of the multi-faceted topic and offering the best possible clinical methods of creating intimacy and addressing its challenges.

Intimate Couple

Systems Consultation challenges two basic assumptions of family therapy: first, that what family therapists should be doing is curing pathology; second, that family interactions can be understood by focusing on families to the exclusion of larger systems. In asking whether therapy is the best and only model for what family therapists do, this book registers a definitive no. In its place it offers a systems consultation role that more accurately captures the range of activities therapists can and currently do engage in.

Systems Consultation

This introduction to couples and family counseling lays the foundation for student skill-building by encouraging the development of personal, professional, and ethical standards of practice. This third edition has been expanded to include couples counseling and updated to reflect recent research and current practice. Primary text features include a genogram delineating the history of the field; a comprehensive discussion of 13 widely used theories with real-life examples of quality work for each approach; a single, bicultural couple/family system case for comparison across models; and strategies for the integration and application of the models into clinical practice with diverse clients. To help readers apply the concepts they have learned, Dr. Bitter provides numerous illustrative examples, case studies, sample client dialogues, and exercises for personal and professional growth. *Requests for digital versions from ACA can be found on www.wiley.com. *To purchase print copies, please visit the ACA website here *Reproduction requests for material from books published by ACA should be directed to permissions@counseling.org

National Library of Medicine Current Catalog

Theories and Strategies of Family Therapy complements and expands upon the Family Therapy with the Experts video series produced by the same authors. Twelve major theories of family therapy are presented. Most are written by the experts who appear in Allyn & Bacon's Family Therapy with the Experts video series. Each chapter begins with a brief description of the theory and what makes it significant. The authors then delineate the clinical perspective and the way in which their approach deals with today's diverse family forms. The authors show how their theory is practiced by presenting ideas and then referencing sections in the corresponding video.

Theory and Practice of Couples and Family Counseling

The Relational Systems Model for Family Therapy presents a multi-systems approach to family therapy that teaches the therapist important self-differentiating capacities that set the tone for creating a powerful therapeutic atmosphere. While the model demands no specific treatment procedures, it does rely on the therapist's capacity to adhere to its basic ideas, as she/he is the most vital factor in the model's success. In The Relational Systems Model for Family Therapy, Author Donald R. Bardill encourages the therapist to be the learning vehicle for the integration of the four realities of life (self, other, context, spiritual) and the differentiating process that is necessary for human survival, safety, and growth. Understanding this model allows therapists to lead clients to heightened self-awareness and the realization of their human potential--both important factors for intellectual growth, emotional maturity, and problem solving. To this end, readers learn about: the self-differentiating therapist--the person-of-the-therapist is the crucial variable in an effective family treatment process the facing process--the client faces such issues as self-identity, life-purpose, thought and behavior patterns, emotionalized fears, and the future emotionalized right/wrong--focus is on consequences of actions rather than right/wrong judgments in relationship issues life stances--the uniqueness of the individual affects their connection to the life realities family grid--a way for the therapist to organize and talk about important family systems dynamics the therapeutic paradox--the client's worldview is examined through the therapist's worldview and a new worldview is formed The Relational Systems Model for Family Therapy is an important handbook for practitioners and students in the fields of clinical social work, psychology, marriage and family therapy, mental health counseling, counseling psychology, pastoral counseling, and psychiatric nursing. The book is also useful as a supplemental text for advanced undergraduate classes and postgraduate seminars in family therapy and family counseling. The self-differentiation nature of the content also lends this book useful to self-help readers.

Theories and Strategies of Family Therapy

First published in 1992. Routledge is an imprint of Taylor & Francis, an informa company.

The Relational Systems Model for Family Therapy

The Adlerian model encourages a democratic view of interpersonal relationships, emphasizing the influences of family atmosphere, family constellation, and the purposeful nature of behavior. Here is a systematic guide to the elements of family counseling, complete with sample dialog to illustrate the concepts.

Handbook Of Family Therapy

A primary role of student affairs professionals is to help college students dealing with developmental transitions and coping with emotional difficulties. Becoming an effective helping professional requires the complex integration of intrapersonal, interpersonal, and professional awareness, and knowledge. For graduate students preparing to become student affairs practitioners, this textbook provides the skills necessary to facilitate the helping process and understand how to respond to student concerns and crises, including how to make referrals to appropriate campus or community resources. Focusing on counseling concepts and applications essential for effective student affairs practice, this book develops the conceptual frameworks, basic counseling skills, interventions, and techniques that are necessary for student affairs practitioners to be effective, compliant, and ethical in their helping and advising roles. Rich in pedagogical features, this textbook includes questions for reflection, theory to practice exercises, case studies, and examples from the field.

Adlerian Family Counseling

Integrative, research-based, multisystemic: these words reflect not only the state of family therapy, but the nature of this comprehensive handbook as well. The contributors, all well-recognized names who have contributed extensively to the field, accept and embrace the tensions that emerge when integrating theoretical perspectives and science in clinical settings to document the current evolution of couples and family therapy, practice, and research. Each individual chapter contribution is organized around a central theme: that the integration of theory, clinical wisdom, and practical and meaningful research produce the best understanding of couple and family relationships, and the best treatment options. The handbook contains five parts: • Part I describes the history of the field and its current core theoretical constructs • Part II analyzes the theories that form the foundation of couple and family therapy, chosen

because they best represent the broad range of schools of practice in the field • Part III provides the best examples of approaches that illustrate how clinical models can be theoretically integrative, evidence-based, and clinically responsive • Part IV summarizes evidence and provides useful findings relevant for research and practice • Part V looks at the application of couple and family interventions that are based on emerging clinical needs, such as divorce and working in medical settings. Handbook of Family Therapy illuminates the threads that are common to family therapies and gives voice to the range of perspectives that are possible. Practitioners, researchers, and students need to have this handbook on their shelves, both to help look back on our past and to usher in the next evolution in family therapy.
