Evaluation has become a central tool in the development of contemporary social policy. Its widespread popularity is based on the need to provide evidence of the effectiveness of policies and programmes. This book sees evaluation as an inherently political activity, as much about forms of governance as scientific practice. Using a wide range of examples from neighbourhood renewal, health and social care and other aspects of social policy, it relates practical issues in evaluation design to their political contexts. With contributions from leading academics and evaluation practitioners, the book considers key issues in the politics of evaluation including: governance and evaluation; participatory evaluation; partnerships and evaluation; and learning from evaluation. The politics of evaluation is important reading for academics, social researchers, policy makers, service providers and professionals across the public services as well as professional evaluators. It will be a valuable resource for students on a range of social science and professional courses and those concerned with recent developments in social research methodology.

As organizations realize the benefits of PM, the need to develop effective management tools rises with the increasing complexity of new technologies and processes. Taking a systems approach to accomplishing goals and objectives, Project Management: Systems, Principles, and Applications covers contemporary tools and techniques of PM from an established pedagogical perspective. A project can be simple or complex. In each case, proven PM processes must be followed with a world systems view of the project environment. While on-the-job training is possible for many of the PM requirements, rigorous and formal training must be used. Consequently, PM resources are of high utility. This text fills the void that exists in the availability of PM resources. Although individual books dealing with management principles, optimization models, and computer tools are available, there are few guidelines for the integration of these three areas for PM purposes. This book integrates these areas into a comprehensive guide to PM. It introduces the triad approach to improve the effectiveness of PM with respect to schedule, cost, and performance constraints within the context of systems modeling. It provides details on an integrated systems PM approach that can help diminish the adverse impacts of these issues through good project planning, organizing, scheduling, and control. Software Quality Approaches: Testing, Verification, and Validation

The founding premise of this book is that the nimbus of prestige, which once surrounded the idea of justice, has now been dimmed to such a degree that it is no longer sufficient to secure the possibility of a good conscience for those who undertake, in good faith, to make the world a better place in the spheres of politics and law. The many decent human beings who have noticed and experienced this diminishment of justice's prestige find themselves in a thoroughly disenchanted existential situation. For them, the attempt to do justice without the illusion of being grounded in something beyond the sheer facticity of their own performances is a distinctly ethical theme, which cries out to be investigated in its own right. Heeding the cry, this book asks and attempts to answer the following fundamental ethical question: is a life in the law – even one spent in the pursuit of justice – worth living, and if so, how can a disenchanted person come to bear the living of it without constantly having to engage in self-deception? If Nietzsche is right that living without illusions is impossible for human beings, then the most important ethical implication of this essentially anthropological fact goes far beyond the question of what illusions we ought to choose. It must also include the question of whether we should succumb to that most seductive and pernicious of all illusions: namely, the belief that exercising great care and responsibility in choosing our illusions – which we might then call our 'principles of justice' – excuses us ethically for what we do to others in their name. The culmination of a 10 year legal-philosophical project, this book will appeal to graduate students, scholars and curious non-academic intellectuals interested in continental philosophy, critical legal theory, postmodern theology, the philosophy of human rights and the study of individual ethics in the context of law.

The Age-Well Project

An expert in securing grant money provides a clear, step-by-step course in grant writing that readers can "attend" from the comfort of their home or office—and proceed with at their own pace. Many organizations that desperately need financial support miss opportunities for funding for two reasons: They don't have the knowledge or resources to successfully pursue and win a grant or they are ignorant of the range of possibilities in private, federal, or state-sourced funds available to them. With the emergence of economic stimulus money intended to assist nonprofits and government agencies suffering in the poor economic conditions, grant-writing is now a more relevant skill than ever before. This text can provide a multitude of benefits, including training existing staff with no prior experience to successfully pursue grant money, saving the cost of hiring a full-time grant writer, and serving as a complete guide for experienced grant writers seeking new options and techniques in obtaining operational funding. Getting Your Share of the Pie: The Complete Guide to Finding Grants also reveals the author's in-depth knowledge about the specific attributes the funding agencies look for via a digest of actual conversations with their representatives.

Through the lens of baking a Dutch apple pie, the book delves into the intricacies of project management, examining systemic views and approaches as effective tools for addressing these challenges. At the very least, readers can expect to acquire the skill of baking a delicious Dutch Apple pie.
