When someone has successfully completed a Standard First Aid Course, they often have a desire to extend their knowledge of first aid. The aim of this book is to give the holders of a Standard First Aid Certificate the opportunity to study the principles of first aid in greater detail. It is not intended to convert the first aider into a highly trained paramedic - so a discussion on the use of intra venous fluids, defibrillators etc., is beyond the scope of this book. It is hoped that the book will provide a useful in-depth study for demonstrators, instructors and first aiders likely to be involved in ambulance duties. I am very grateful to Brigadier D.O. O'Brien, Chief Medical Adviser, British Red Cross Society and Mrs. R.H. Smith, Assistant Branch Director (Training), Leicestershire Branch of the British Red Cross Society for their helpful comments and encouragement. I acknowledge the use of illustrations from the Clinical Symposia Series by CIBA on the "Heimlich Manoeuvre" to form the basis of Figures 3.7, 3.8 and 3.9.

First Responder

First aid is the assistance that one gives to a person who has an emergency medical condition such as serious bleeding, choking, or the need for CPR. It is essential for people who may not be trained in other areas of healthcare. For example, paramedics are valuable because they have medical training and equipment to handle more serious emergencies than someone without those qualifications. It is important to learn First Aid because it can help save someone's life. This is especially true for those who do not have training in other areas of healthcare and are the first to respond to emergencies. It is also important because a person's life may be saved by knowing how to provide basic assistance in an emergency through CPR, or the Heimlich maneuver. Within the United States alone, about 300,000 people die from heart disease every year (CDC). One should be able to give correct CPR because it could relieve a person from cardiac arrest until medical professionals can arrive. First Aid could also be useful for many other reasons such as burns, bleeding, and bone and muscle injuries. The purpose of this book is to inform the reader of the information needed to help someone with an emergency and to provide tips for how to respond if confronted with one. When learning how to give first aid, it is important to know who would be more appropriate for the situation. First aid training can be done in a classroom setting, but it may not be necessary. There are many reasons why an individual would need first aid training and how it could benefit them or others. The most important reason why one would need first aid is because they may not have any other medical training (CDC). The information you learn will be useful in the future to save a person's life. The following are a few reasons why it is important to have first aid training: This book covers: General First Aid Knowledge First Aid Knowledge to be Mastered and Developed Drugs Used in First Aid Common Types of Drug Administration Sites Splints for Broken Bones and Joints Gravity First Aid Development of Basic First Aid Skills Special Needs of the Elderly People and Handicapped People in Case of Illness or Accident Pregnancy in Case of an Accident Childbirth in Case of an Accident And much more... Everyone should know how to give basic first aid such as bandaging wounds, splints, and using an oxygen mask. Knowing how to provide these types of first aid may be useful in the future. For example, someone who has an injury may not have any medical training; however, they could be able to give good quality first aid if they were educated on the subject. Also, knowing how to help with a burn or bleeding wound allows one to help with painlessly. Also, it could save the person's life until medical professionals arrive. This book will surely help you in getting the right knowledge, skills and attitude to become a good first-aider. This book will cover step by step instructions on how to save someone's life.

First Responder Exam Secrets Study Guide

Ask any fire/rescue or EMS person and they will tell you: the key to emergency response is preparedness. First comes prevention; knowing how to stop emergencies before they happen. Yet if sudden injury or illness occurs, knowing what to do can make the difference between a mild emergency and a serious one, or even between life and death. When you don't know, panic usually results; now you're part of the problem. But don't fret; the information you need to be the first step in the solution – basic first aid and safety skills – is relatively simple and easy to learn. Easy to learn, yes, but if things go wrong, your learning suddenly makes all the difference. *First Aid and Safety For Dummies* gives you the tools you need to save a life. Whether it's performing CPR correctly or accident-proofing your home, this comprehensive guide shows you how to effectively prevent and respond to emergencies. In typical lively-yet-informative Dummies style, you'll find out about dealing with: Wounds Burns Poisoning Shock Bites and stings Choking And much more Thorough instructions detail each problem and its first aid; off-putting jargon is kept to a minimum and common sense to a maximum in considering not only the classic symptoms (for example, two hands on the throat for choking) but also the variations (what if that choking victim is you – and you're alone?) that crop up in real-world emergencies. Emphasizing practicality and ready-to-use knowledge, this book also covers: Creating a first-aid kit Safety for all areas of the home Special needs of children, the elderly, and the disabled A chapter on hazards of the high-tech workplace Sports injuries and accidents Herbal remedies CPR and artificial respiration Emergency rescue procedures Who to call and when Preparedness is peace of mind. With the knowledge you'll gain from *First Aid and Safety For Dummies*, you can rest assured that you've taken the most effective steps against accidents and mishaps. You can also be confident that if an emergency does occur, yours will be the calmer, cooler head, and cooler heads are the ones that prevail.
