Using a consistent, logical, and step-by-step approach, MEDICAL TERMINOLOGY: A LIVING LANGUAGE, 5/e introduces students to the anatomy and physiology of body systems and the corresponding medical terms related to them. For each body system, broad coverage of anatomy, physiology, pathology, diagnostic procedures, treatment procedures, and pharmacology is provided. The author emphasizes both terms built from Latin and Greek word parts, and modern English terms, helping students develop a full working word part vocabulary they can use to interpret any new term. This edition contains many new terms, and has been reorganized for more efficient learning. To eliminate confusion, Word Building tables have been removed from each chapter and the terms have been distributed throughout the pathology, diagnostic procedure, and treatment procedure tables, where they are more immediately relevant to students. Guide to Clinical Documentation

Like the original Ward-based Critical Care, this second edition aims to guide practitioners in the initial management of critically ill adult patients within the ward setting. It should be of value to a wide range of healthcare professionals, including junior doctors, nurses, physiotherapists and students. It will also be relevant to practitioners who are moving into any setting that cares for acutely ill patients. This volume has been slightly reorganised since the first edition to ensure that practical aspects are incorporated within the relevant sections. The book is still structured around the ABCDE approach to assessing and managing patients, as this is promoted in critical care and resuscitation care training. The focus on practical examples and 'hot tips' to aid memory of key points continues. All the chapters have been updated with the most recent guidance, as available at the time of writing. This has meant that some chapters have required major revisions, while others have remained relatively unchanged. Some new chapters have been included, such as the ones on anaphylactic shock, patient safety, dealing with pregnant women in the ward setting, and massive blood transfusion. In addition, each section now starts with a chapter giving an overview of the A–E approach in order to provide more detail about assessing and managing those aspects of patient care. This informative book contains many useful features such as clinical scenarios, hot tips and practical skills, and the text is richly illustrated and cross-referenced throughout.
