Aperture & f/stop Tutorial - Aperture & f/stop Tutorial by Tony & Chelsea Northrup 899,132 views 8 years ago 12 minutes, 38 seconds - Aperture & f/stops don't have to be complicated. We start the video by demonstrating what you absolutely must understand: how to ...

1. Aperture & Depth-of-field Essentials. The most important things you need to know about f/stop: how to get everything in focus.

2. The Focal Plane. The focal plane is two dimensional, up & down and left & right. Moving forward or back from your focal plane will make a subject increasingly blurry.

3. Exposure & f/stop. Low f/stop numbers let more light in, while high f/stop numbers let less light in.

4. The Iris & f/stop Numbers. Low f/stop numbers have a big iris opening, while high f/stop numbers have a small iris opening.

5. f/stop Math. Tony & Chelsea explain the math behind those strange f/stop numbers.

6. Depth-of-Field. Some people use depth-of-field calculators, but they're not reliable--and we show you why.

7. Hyperfocal Distance. Likewise, hyperfocal distance doesn't necessarily work as you might expect.

8. Background Blur. Low f/stop numbers blur your background.

9. Sharpness & The Sweet Spot. Your lens is the sharpest at low or moderate f/stop numbers. We show you how to find your sweet spot.

10. Chromatic Aberration. At low f/stop numbers, you might get purple or green fringes in high-contrast parts of your picture. Fortunately, that's easy to fix.

11. Vignetting. At low f/stop numbers, the corners of your pictures will often be darker. It's also easy to fix.

12. Summary

HX50 Monthly Updated & AMA - 13 March 2024 - HX50 Monthly Updated & AMA - 13 March 2024 by Hill Helicopters 6,018 views 3 days ago 2 hours, 4 minutes - Tune in to the latest HX50 Monthly Update & AMA, broadcast live on March 13, 2024, from the Hill Development Centre.
