Interdisciplinary knowledge is becoming increasingly important to the modern scientist. This invaluable textbook covers bioanalytical chemistry (mainly the analysis of proteins and DNA) and explains everything for the non-biologist. Electrophoresis, mass spectrometry, biosensors, bioassays, DNA and protein sequencing are not necessarily all included in conventional analytical chemistry textbooks. The book describes the basic principles and the applications of instrumental and molecular methods. It is particularly useful to chemistry and engineering students who already have some basic knowledge about analytical chemistry. This revised second edition contains a new chapter on optical spectroscopy, and updated methods and new references throughout. Andreas Manz received the 2015 Inventor Award for "Lifetime Achievement" from the European Patent Office. This book offers a toolbox to ease the physiology exam-making process. It provides lists of physiological concepts for each topic, according to basic, advanced or specialized areas of knowledge. Depending on their requirements, the reader is able to use this book in two ways: either by grabbing questions “on demand”, or by making lists of concepts interspersed in the questions. In addition, the book provides a suggested bibliography depending on the level of experience of the reader. Each chapter details a number of teaching schedules, and will help the reader to enjoy the joys of physiology and, of course, teaching.
