of 2018! ‡Respiratory Therapy Zone by Respiratory Therapy Zone 55,894 views 5 years ago 1 hour, 2 minutes - ————— ;How are some Respiratory Therapy Students passing the TMC **Exam**, so easily? That's a question I get asked far ...

The AARC Clinical Practice Guidelines state that a Forced Vital Capacity of 70% of predicted is an indication for IPPB when other forms of therapy have been unsuccessful.

Common medications used to sedate mechanically ventilated patients include benzodiazepines like Versed, hypnotics like Diprivan, and alpha-2 agonists like Precedex.

The primary indication and approved use of inhaled nitric oxide is for the treatment of term and near-term neonates with hypoxemic respiratory failure due to persistent pulmonary hypertension of the newborn (PPHN).

A tension pneumothorax is a medical emergency. Treatment always involves decompression of the pleural space by either needle or tube thoracostomy (aka chest tube insertion).

Which of the following medications should the respiratory therapist recommend for an infant with apnea of prematurity experiencing episodes of apnea?

Caffeine's proposed mechanisms include: the stimulation of skeletal and diaphragmatic muscular contraction, it helps to increase the respiratory center's sensitivity to carbon dioxide, and it helps with the stimulation of the central respiratory drive.

Due to the risk of aspiration and need for ventilatory support, the patient requires a cuffed endotracheal airway, which rules out use of a laryngeal mask.

Pulsus paradoxus is defined as an abnormal decrease in pulse strength (and blood pressure) during inspiration. It is commonly seen in patients with hyperinflation and air trapping (e.g., COPD, asthma, croup) and may also be observed in those with pericarditis or cardiac tamponade.

Management of patients with fluid overload (overhydration) normally includes restriction of fluid intake, administration of diuretics, and in critically ill patients, insertion of a CVP or PA catheter to closely monitor fluid balance.
