Vitamin D, Deep sleep & Gut Bacteria w/ Dr. Stasha Gominak - Vitamin D, Deep sleep & Gut Bacteria w/ Dr. Stasha Gominak by High Intensity Health 2,441,571 views 6 years ago 1 hour, 24 minutes - Dr. Stasha Gominak discusses how vitamin D (from the sun) is needed to improve the stability of gut bacteria, which in turn help ...

Intro

Hundreds of Dr. Gominak's patients, children, teenagers and young healthy females, didn't have REM sleep.

Sleep apnea, fibromyalgia, chronic fatigue were not recognized in the 1960s and 1970s, because they were not epidemic.

Vitamin D and the brain stem are major players in deep sleep.

You must be paralyzed in order to achieve the proper levels of sleep.

Why would an 8 year old have more than one sleep disorder?

There has been a major historical shift from living/working/playing outside.

Once you replace vitamin D, the body slowly changes from a vitamin D deficient body to a B deficient body.

While bears hibernate, their microbiome consumes the colonic mucus, which makes all of the B vitamins to meet the bear's metabolic needs during hibernation. Does ours?

Why Did It Take 2 Years to Become B Deficient?

Each B vitamin has an intestinal bacterial source and a food source.

Wanted: Gut Bugs

You can fix your own bacteria with vitamin D levels above 40 and take B100 or B50 for 3 months.

The sodium linked multivitamin transport system pumps 3 vitamins, pantothenic acid, alpha lipoic acid and biotin, into our digestive system and our brain.

Dr. Gominak sees a correlation between autism and vitamin D deficiency.

The development of sexual dysmorphism and sleep.

When a child cannot get out of bed in the morning, this is may be the brain demanding that they go back to sleep to get REM.

A lack of REM sleep cheats a child of their normal development.

Children and adults normally make small subtle movements and tiny vocalizations, not talking, walking or falling out of bed.

Taking the Weston A. Price westernization theory to another level.

Breastfeeding enlarges nasal passages.

Dr. Gominak believes that vitamin D is trophic to the bacteria that we are supposed to have in our gut.

Pantothenic acid not only makes acetylcholine, it makes cortisol.

A test result of pantothenic acid levels will parallel magnesium levels. It tells you what is in the blood, but not what is in the stores.

Perhaps we are completely self-healing with REM sleep.

Dr. Gominak's Morning Routine

The ketogenic diet helps people to live longer. Being ketogenic during REM sleep helps us repair.

We were probably designed to go into ketosis for at least 12 hours every night.

A new theory is that the tricarboxylic acid/CREB cycle, which is used when you are using fats as your energy supply, may have a different purpose. It may not be about making ATP.
