A food chain describes how different organisms eat each other, starting out with a plant and ending with an animal.

The atmosphere is the layer of gases that surrounds the Earth. The three most important gases in the atmosphere are nitrogen, oxygen and carbon dioxide. The atmosphere is made up of several layers. All living things need to be able to move. Moving does not have to consist of big movements. Even plants move, for example as the flowers and leaves turn to face the sun during the course of the day. We now know what animals, plants and other living organisms need. Organisms require (need) certain things or specific conditions. Let's take a look at the requirements necessary to sustain life.
